CHAPTER 1

INTRODUCTION

The aim of the University of Debrecen is to become a university of medical sciences committed to the prevention and restoration of health of the people, not only in its region but in the entire country. In the past two decades both medical science and health care have entered a new era: the medical science of the 21st century. Molecular medicine is opening up and new possibilities are available for the diagnosis, prevention, prediction and treatment of the diseases. One can witness such a progress in medical sciences that has never been seen before. Modern attitudes in health care should be enforced in practice, including therapeutical approaches that consider the explanation and possible prevention of diseases, and attempt to comprehend and take the human personality into consideration. These approaches demand the application of the most modern techniques in all fields of the medical education.

All curricula wish to meet the challenges of modern times and they embody some very basic values. They are comprehensive; they take into consideration the whole human personality (body and soul) in its natural and social surroundings; and they are based upon the best European humanistic traditions. Moreover, all curricula prepare students for co-operation and teamwork.

With respect to education, both students and teachers are inspired to acquire higher levels of professionalism, precision, and problem solving skills, upon which the foundations of specialist training and independent medical practice can be built. This approach enables the assimilation of new scientific developments, facilitating further education and the continuous expansion of knowledge. The interplay of these factors ensures the ability to understand and handle the changing demands of health care.

With respect to research, the faculty members continuously acquire, internalize and subsume new knowledge, especially concerning the genesis, possible prevention and treatment of diseases. Moreover, new information aimed at improving, preserving and restoring the health of the society is also absorbed. The University of Debrecen is already internationally recognized in the fields of both basic and clinical research, and the clinicians and scientists of the University are determined to preserve this achievement. Special attention is given to facilitate and support the close co-operation of researchers representing basic science and clinical research, and/or interdisciplinary studies.

With respect to therapeutic practice, the main objective is to provide high quality, effective, up to date and much devoted health care to all members of the society, showing an example for other medical institutions in Hungary. One of the primary tasks is to continuously improve the actual standards of the diagnostic and therapeutic procedures and techniques, and to establish regional or even nationwide protocols.

With respect to serving the community, all faculty members wish to play a central role in shaping the policies of the health service; both within the region and in Hungary. They also want to ensure that sufficient number of medical doctors, dentists and other health care experts with university education is provided for the society.

With respect to the development, all employees strive for reinforcing those features and skills of the lecturers, scientists, medical doctors, health care professionals, collaborators and students which are of vital importance in meeting the challenges of medical education, research and therapy of the 21st century. These include humanity, empathy, social sensitivity, team-spirit, creativity, professionalism, independence, critical and innovative thinking, co-operation and management.

The organizational structure, including the multi-faculty construction of the institution, is a

constantly improving, colorful educational environment, in which co-operation is manifest between the individual faculties and colleges, the various postgraduate programs as well as the molecular- and medical biology educations.

HIGHER EDUCATION IN DEBRECEN

A Brief History

1235: First reference to the town of Debrecen in ancient charters.

1538: Establishment of the “College of Reformed Church” in Debrecen.

1567: Higher education begins in the College.

1693: Declaration of Debrecen as a “free royal town”.

1849: Debrecen serves as the capital of Hungary for 4 months.

1912: Establishment of the State University of Debrecen comprising the Faculties of Arts, Law, Medicine and Theology.

1918: Inauguration of the Main Building of the Medical Faculty by King Charles IV of Hungary.

1921: The Medical Faculty becomes operational.

1932: Completion of buildings of the campus.

1944: Although during the Second World War, Debrecen became the capital of Hungary again (for 100 days), the University itself is abandoned for a while.

1949: The only year when the University has five faculties.

1950: The Faculty of Law idles; the Faculty of Science is established.

1951: The University is split up into three independent organizations: Academy of Theology, Medical School, Lajos Kossuth University of Arts and Sciences.

1991: The “Debrecen Universitas Association” is established.

1998: The “Federation of Debrecen Universities” is founded.

2000. The federation is transformed into the unified “University of Debrecen” with all the relevant faculties and with some 20,000 students.

Debrecen is the traditional economic and cultural center of Eastern Hungary. In the 16th century Debrecen became the center of the Reformed Church in Hungary and later it was referred to as the “Calvinist Rome”. The 17th century was regarded as the golden age of the city because Debrecen became the mediator between the three parts of Hungary: the part under Turkish occupation, the Kingdom of Hungary and the Principality of Transylvania. For short periods of time, Debrecen served twice as the capital of Hungary. Nowadays, with its population of approximately a quarter of a million, it is the second largest city in Hungary.

Debrecen is a unique city: although it has no mountains and rivers, its natural environment is rather interesting. One of the main attractions and places of natural uniqueness in Hungary is Hortobágy National Park, known as “puszta” (“plain”), which begins just in the outskirts of Debrecen. This is the authentic Hungarian Plain without any notable elevations, with unique flora and fauna, natural phenomena (e.g. the Fata Morgana), and ancient animal husbandry traditions. The region is unmatched in Europe, no matter whether one considers its natural endowments or its historic and ethnographic traditions. A very lovely part of Debrecen is the “Nagyerdő” (“The Great Forest”), which is a popular holiday resort. Besides a number of cultural and tourist establishments, luxurious thermal baths and spas, Nagyerdő accommodates the University campus too.

The history of higher education in Debrecen goes back to the 16th century when the College of the

Reformed Church was established. The University Medical School of Debrecen has its roots in this spiritual heritage. It was in the year of the millennium of the establishment of Hungary (1896) when the foundation of the present University was decided. The University of Debrecen was established in 1912, initially having four faculties (Faculties of Arts, Law, Medicine and Theology). The University was officially inaugurated by King Charles IV of Hungary on October 23rd, 1918. The educational activity at the University started in 1924, although the construction of the whole University was completed only in 1932. In 1951 the Faculty of Medicine became a self-contained, independent Medical University for training medical doctors.

The special training of dentists began in 1976. As a further development the University Medical School established the Health College of Nyíregyháza in 1991. In 1993, as part of a nationwide program, the University was given the rights to issue scientific qualifications and new Ph.D. programs were also launched. Several new programs (e.g. the training of molecular biologists, pharmacists, general practitioners) were commenced in the '90s. The Faculty of Public Health was established in 1999, while the Faculty of Dentistry was founded in 2000.

The Faculty of Medicine celebrated the 90th anniversary of its foundation in October 2008 with a highly successful international scientific conference.

Education at the University of Debrecen

Debrecen, the second largest city of Hungary, is situated in Eastern Hungary. Students enrolled in the various programs (e.g. Medicine, Dentistry, Pharmacy, Public Health, Molecular Biology, etc.) study on a beautiful campus situated in the area called "Great Forest".

The Hungarian Government gives major priorities to the higher education of health sciences in its higher education policy. One of these priorities is to increase the ratio of college level training forms within the Hungarian higher education system. The governmental policy wishes to implement conditions in which the whole health science education system is built vertically from the lowest (post-secondary or certificate) to the highest (PhD-training) levels. In fact, this governmental policy was the reason behind the establishment of the new Health Science Education Center within the Federation of Debrecen Universities (DESZ), based partially on the intellectual resources of the University of Debrecen. The new programs – with specialized training for paramedics – will help to correct the balance of the Hungarian labor-market that became rather unsettled in the past few decades.

The Act of Higher Education (1993) has restored the rights of the medical universities to award postgraduate degrees and residency, and permission was also given to license Physicians' procedures. This kind of training required a new structure, a new administrative apparatus, and a suitable training center. The new residency programs were commenced in 1999.

The introduction of the credit system, starting in September 2003, has been mandatory in every Hungarian university, helping the quantitative and qualitative evaluation of the students' achievements. Admission requirements for Hungarian students are defined at national level, and they are applicable for every student wishing to be enrolled into the Medicine or Dentistry programs.

International students must pass an entrance exam in biology and (depending on their preference) in physics or chemistry. In some special cases it may be possible for the candidates to apply for transfer to higher years on the basis of their previous studies and achievements. International students study in English language. Entrance for certain courses of the Health College is also possible on the basis of a special evaluation (scoring) and an entrance interview.

The syllabuses and classes of all courses correspond to European standards. The total number of

contact hours in medical education is over 5,500, which can be divided into three main parts: basic theoretical training (1st and 2nd year), pre-clinical subjects (3rd year) and clinical subjects (4th and 5th year) followed by the internship (6th year). The proportion of the theoretical and practical classes is 30% to 70%; whereas the students/instructors ratio is about 8/1. The first two years of dentistry education are similar to the medicine program, but the former contains a basic dental training that is followed by a three-year-long pre-clinical and clinical training. Besides the medicine and dentistry programs, there are several other courses also available, including molecular biology. The various Health College courses include more and more new curricula.

The Medicine program delivered in English and intended for international students was commenced in 1987; whereas the Dentistry and Pharmacy programs for international students started in 2000 and 2004, respectively. The curriculum of the English language Medicine program meets all the requirements prescribed by the European medical curriculum, which was outlined in 1993 by the Association of Medical Schools in Europe. Compared to the Hungarian program, the most important differences are:

- Hungarian language is taught,
- More emphasis is laid upon the tropical infectious diseases (as parts of the “Internal Medicine” and “Hygiene and Epidemiology” courses).

Otherwise, the English language curriculum is identical with the Hungarian one. The 6th year of the curriculum is the internship that includes Internal Medicine, Pediatrics, Surgery, Obstetrics and Gynecology, Neurology, and Psychiatry. The completion of these subjects takes at least 47 weeks, although students are allowed to finish them within a 24-month-long period. The successfully completed internship is followed by the Hungarian National Board Examination. Just like the rest of the courses, the internship is also identical in the Hungarian and English programs.

A one-year-long premedical (Basic Medicine) course, which serves as a foundation year, is recommended for those applicants who do not possess sufficient knowledge in Biology, Physics and Chemistry after finishing high school.

After graduation, several interesting topics are offered for PhD training, which lasts for three years. If interested, outstanding graduates of the English General Medicine and Dentistry programs may join these PhD courses (“English PhD-program”). Special education for general practitioners has been recently started and a new system is in preparation now for the training of licensed physicians in Debrecen.

The accredited PhD programs include the following topics:

- Molecular and Cell Biology; Mechanisms of Signal Transduction
- Microbiology and Pharmacology
- Biophysics
- Physiology-Neurobiology
- Experimental and Clinical Investigations in Hematology and Hemostasis
- Epidemiological and Clinical Epidemiological Studies
- Cellular- and Molecular Biology: Study of the Activity of Cells and Tissues under Healthy and Pathological Conditions
- Immunology
- Experimental and Clinical Oncology
- Public Health
- Preventive Medicine
- Dental Research

The PhD-programs are led by more than 100 accredited, highly qualified coordinators and tutors.

Medical Activity at the Faculty of Medicine

The Faculty of Medicine is not only the second largest medical school in Hungary, but it is also one of the largest Hungarian hospitals, consisting of 38 departments; including 21 different clinical departments with more than 1,800 beds. It is not only the best-equipped institution in the area but it also represents the most important health care facility for the day-to-day medical care in its region.

The Kenézy Gyula County Hospital (with some 1,400 beds) is strongly affiliated with the University of Debrecen and plays an important role in teaching the practical aspects of medicine.

There are also close contacts between the University and other health care institutions, mainly (but not exclusively) in its closer region. The University of Debrecen has a Teaching Hospital Network consisting of 26 hospitals in Israel, Japan and South Korea.

It is also of importance that the University of Debrecen has a particularly fruitful collaboration with the Nuclear Research Institute of the Hungarian Academy of Sciences in Debrecen, allowing the coordination of all activities that involve the use of their cyclotron in conjunction with various diagnostic and therapeutic procedures (e.g. Positron Emission Tomography 'PET').

Scientific Research at the Faculty of Medicine

Scientific research is performed both at the departments for basic sciences and at the laboratories of clinical departments. The faculty members publish about 600 scientific papers every year in international scientific journals. According to the scientometric data, the Faculty is among the 4 best of the more than 80 Hungarian research institutions and universities. Lots of scientists reach international recognition, exploiting the possibilities provided by local, national and international collaborations. Internationally acknowledged research areas are Biophysics, Biochemistry, Cell Biology, Immunology, Experimental and Clinical Oncology, Hematology, Neurobiology, Molecular Biology, Neurology, and Physiology. The scientific exchange program involves numerous foreign universities and a large proportion of the faculty members are actively involved in programs that absorb foreign connections (the most important international collaborators are from Belgium, France, Germany, Italy, Japan, the UK and the USA).

CHAPTER 2

PHARMACIST-TRAINING AT THE UNIVERSITY OF DEBRECEN

Pharmacist-training at the University of Debrecen

The establishment of the Faculty of Pharmacy at the University of Debrecen serves continuous development, change, renewal, and also reputation and prestige both nationally and internationally. At the University of Debrecen the organization and formation of pharmacist-training was started by Professor Géza Mezey in 1995, as a result of which in 1996 the teaching of the first year was launched in the field of pharmacist-training at the those days separately functioning Lajos Kossuth University of Sciences and Debrecen University of Medical Sciences. For the establishment and building of the Institute of Pharmaceutical Sciences (2001) the outstanding cooperation, effort, compromise approach, and continuous support of the management of the former Debrecen University of Medical Sciences and Lajos Kossuth University of Sciences were inevitable. Without these and the active assistance and collaboration of the colleagues and the university's management, the Faculty of Pharmacy could not have been in its current form and developed for the 100th year jubilee anniversary of establishment of the University of Debrecen. The coordination and improvement of the pharmacist-training was further concentrated into the hands of Professor Géza Mezey, the director of the Institute of Pharmaceutical Sciences (2001), until his death (17 October, 2001).

The main building of the present Faculty of Pharmacy, where the Center's Pharmacy and the Dean's Office had been placed, was handed over in 2001 and the new building fully satisfies in every way the widespread supply of medicinal products towards the departments of the University of Debrecen and meets the requirements of pharmacist-training according to the standards of the European Union. Without the previous and present management of the University, the devoted help and cooperation of the departments belonging to the Faculty of General Medicine and the former Faculty of Natural Sciences at Lajos Kossuth University of Sciences where the acquisition of the basic subjects of Chemistry and Biology is ensured for the students of Pharmacy, the pharmacist-training would not have become possible at the University of Debrecen. The Hungarian anthem was first played in 2001 as this was the first year when pharmacist degrees were awarded at the ceremonial council meeting of the University of Debrecen. With the support and guidance of the management of that time and of the president of the Medical and Health Science Center, the draft for the accreditation of the Institute of Pharmaceutical Sciences to become a faculty was prepared. In 2003 it was approved by the Hungarian Accreditation Committee and from this year on the Faculty of Pharmacy started to operate as a separate organizational unit at the University of Debrecen, as its eleventh faculty. One of the fundamental prerequisites for the Institute of Pharmaceutical Sciences to become a faculty was to establish at least five independent departments. The University fulfilled this basic requirement by the founding of the Department of Pharmaceutical Technology (1996), Pharmacology (1998), Pharmaceutical Management and Organization (1999), Biopharmacy (2000), Pharmaceutical Chemistry (2001), Clinical Pharmacology (2001), and thus increased the number of its departments to six. In 2011 the number of departments at the Faculty of Pharmacy increased again as TEVA and the University of Debrecen Medical and Health Science Center's Faculty of Pharmacy founded the "of Industrial Pharmaceutics" that strengthens the practical education for the students during the training of pharmacist doctors.

The Faculty of Pharmacy successfully joined the University's Ph.D. training within the framework of the scheduled programs of the doctorate schools.

After successfully turning into faculty, we prepared the thematics of the English language

pharmacist-training, and successfully launched the English language training (2004) for the foreign students of Pharmacy – which has already had considerable traditions at the fields of medical doctor and dentist training at the University of Debrecen. There are more and more foreign students applying for the English language program, at present the number per year exceeds 25 persons. Being grateful for the efforts of Professor Géza Mezey, the Faculty commemorates him with honor through the Dr. Géza Mezey Foundation named after him. The Advisory Board of the Géza Mezey Foundation and the Dean of the University of Debrecen's Faculty of Pharmacy have been awarding commemorative medals each year since 2003 for outstanding scholastic records, outstanding contributions to the student scientific society, and also as the acknowledgement of effective education.

CHAPTER 3 ORGANISATION STRUCTURE

RECTOR OF THE UNIVERSITY OF DEBRECEN	
Rector	Zoltán Bács Ph.D.
Address	4032 Debrecen, Egyetem tér 1.

CHAPTER 6

DEPARTMENTS OF THE FACULTY OF PHARMACY

DEPARTMENT OF BIOPHARMACY

Nagyerdei krt. 98., Debrecen, 4032, Tel: +36-52-411-717/54591

E-mail: halmos.gabor@pharm.unideb.hu

Professor, Head of Department	Gábor Halmos D.Pharm., Ph.D.
Assistant Professor	Ms. Nikoletta Dobos M.Sc., Ph.D.
	Ms. Zsuzsanna Szabó M.Sc., Ph.D.
	Ms. Barbara Zsebik M.Sc., Ph.D.
Junior Research Fellow	József Király M.Sc.
PhD Student	Ms. Petra Fodor M.Sc.
	Gábor Kónya M.Sc.
	Ákos József Steli D.Pharm.
	Ms. Anna Vass D.Pharm.
Manager Assistant	Ms. Judit Kulcsár M.Sc.
Academic Advisor	Ms. Nikoletta Dobos M.Sc., Ph.D.
	Ms. Zsuzsanna Szabó M.Sc., Ph.D.

DEPARTMENT OF PHARMACEUTICAL CLINICAL BASICS

Nagyerdei krt. 98., Debrecen, 4032, Tel: +36-52-255-600

Associate Professor, Head of Department	Miklós Bodor M.D., Ph.D.
Full Professor	Péter Kovács M.D., Ph.D., D.Sc.
Associate Professor	Ms. Eszter Berta M.D., Ph.D.
Assistant Professor	Ms. Sára Bak-Csiha
Invited Lecturer	János Borvendég M.D.
	Béla Gachályi M.D., D.Sc.

AFFILIATED DEPARTMENT OF INDUSTRIAL PHARMACEUTICAL MANUFACTURING

Pallagi út 13., Debrecen, 4022

Head of Department	Ms. Magdolna Györgyné Vágó D.Pharm., Ph.D.
--------------------	--

DEPARTMENT OF MOLECULAR AND NANOPHARMACEUTICS

Rex Ferenc u.1., Debrecen, 4002, Tel: +36-52-411-717/58440

Associate Professor, Head of Department	Ferenc Fenyvesi D.Pharm., Ph.D.
Associate Professor	Lóránt Székvölgyi M.Sc., Ph.D.
Assistant Professor	Ms. Katalin Réti-Nagy D.Pharm., Ph.D.
	Ms. Ágnes Rusznyák D.Pharm., Ph.D.
Resident	Ms. Csenge Urgyán D.Pharm.
PhD Student	Ms. Lilla Hornyák M.D.
	Ms. Dóra Szabó-Varga M.Sc.
	Ms. Zeina Esmandar M.Sc.
	Ms. Zeinab Ibrahim D.Pharm.
	Qadir Dyari Ramadhan M.Sc.
Assistant	Ms. Anita Bordán-Kovács

DEPARTMENT OF PHARMACEUTICAL CHEMISTRY

Egyetem tér 1., Debrecen, 4032, Tel: +36-52-512-900/22346

E-mail: molnar-koszorus.zsuzsa@pharm.unideb.hu, Web: <http://pharm.unideb.hu/hu/node/137>

Professor, Head of Department	Ms. Anikó Borbás Ph.D., D.Sc.
Professor Emeritus	Pál Herczegh Ph.D., D.Sc.
Associate Professor	Ms. Ilona Bakai-Bereczki Ph.D.
Assistant Professor	Miklós Bege D.Pharm., Ph.D.
	Ms. Erika Hevesi-Mező Ph.D.
	Ms. Fruzsina Józsefné Demeter M.Sc., Ph.D.
	Ms. Ágnes Homolya Ph.D.
	Ms. Nóra Hudákné Debreczeni M.Sc., Ph.D.

DEPARTMENT OF IMMUNOLOGY

Egyetem tér 1., Debrecen, 4032, Tel: +36-52-417-159

Web: www.immunology.unideb.hu

Full Professor, Head of Department	Attila Bácsi M.Sc., Ph.D., D.Sc.
Full Professor	Gábor Konecz M.Sc., Ph.D.
Associate Professor	Árpád Lányi M.Sc., Ph.D.
Assistant Professor	Ms. Tünde Fekete M.Sc., Ph.D.
	Ms. Johanna Mihály M.Sc., Ph.D.
	Ms. Kitti Pázmándi M.Sc., Ph.D.
	Attila Szöllősi M.D., Ph.D.
	Ms. Anett Türk-Mázló M.Sc., Ph.D.
Assistant Lecturer	Ms. Aliz Varga M.Sc., Ph.D.
Research Fellow	Péter Gogolák M.Sc., Ph.D.
	György Hajas M.Sc., Ph.D.
Research Assistant	Ms. Adrienn Gyöngyösi M.Sc., Ph.D.
	Ms. Dorottya Horváth M.Sc.
	Ms. Judit Kállai M.Sc.
	Szabolcs Muzsai M.Sc.
	Ms. Zsófia Péntes M.Sc.
PhD Student	Roland Ander M.Sc.
	Ms. Viktória Jenei M.Sc.
	Ms. Petra Molnár M.Sc.
	Ms. Zsuzsa Muszka M.Sc.

DEPARTMENT OF LABORATORY MEDICINE

Nagyterdei krt. 98., Debrecen, 4032, Tel: +36-52-340-006

E-mail: info@lmi.hu, Web: <https://labmed.unideb.hu>

Full Professor, Head of Department	Ms. Zsuzsa Bagoly M.D., Ph.D., D.Sc.
Full Professor	János Kappelmayer M.D., Ph.D., D.Sc.
	Péter Antal-Szalmás M.D., Ph.D., D.Sc.
	Harjit Pal Bhattoa M.D., Ph.D., D.Sc.
Associate Professor	Ms. Zsuzsa Hevessy M.D., Ph.D.
	Béla Nagy Jr. M.D., Ph.D., D.Sc.

Assistant Professor	Sándor Baráth M.Sc., Ph.D.
	Ms. Bettina Kárai M.D.
	Ms. Adrienne Kerényi M.D., Ph.D.
Assistant Lecturer	Ms. Judit Budainé Tóth M.D., Ph.D.
	Zsolt Fejes M.Sc., Ph.D.
	Ms. Beáta Tóth Lajszné M.Sc., Ph.D.
	Gábor Nagy M.D., Ph.D.
Research Fellow	György Jázon Balla
	Bálint Krajcsir
Assistant Research Fellow	Ms. Bettina Palicskó
PhD Student	Ms. Marianna Pócsi
	Ms. Róza Vargáné Földesi
Lecturer	Ms. Anita Bartha-Tatár M.D.
	Ms. Sarolta Füzi-Demeter M.D.
Resident	Ms. Dóra Bencze M.D., Ph.D.
	Ms. Dorottya Hadházi M.D.
	Ms. Rebeka Hodossy-Takács M.D.
	Attila Ádám Szabó M.D.
Academic Advisor	Ms. Adrienne Kerényi M.D., Ph.D.

Division of Clinical Laboratory Science

Nagyerdei krt. 98., Debrecen, 4032, Tel: +36-52-431-956

E-mail: ekatona@med.unideb.hu, Web: crc.med.unideb.hu

Associate Professor, Head of Division	Ms. Zsuzsanna Bereczky M.D., Ph.D., D.Sc.
Professor Emeritus	László Muszbek M.D., Ph.D., D.Sc., M.H.A.Sc.
Associate Professor	Ms. Éva Katona M.Sc., Ph.D. habil.
Senior Research Fellow	Amir Houshang Shemirani M.D., Ph.D.
Assistant Professor	Ms. Krisztina Péntes-Daku M.Sc., Ph.D.
Assistant Lecturer	Ms. Réka Gindele M.Sc., Ph.D.
Research Fellow	Gábor Balogh M.Sc., Ph.D.
Junior Research Fellow	Ms. Réka Kissné Bogáti M.Sc., Ph.D.
	Ms. Linda Lóczi M.Sc., Ph.D.
PhD Student	Ms. Dóra Ilona Bomberák M.Sc.

	Ms. Tünde Miklós M.D.
	Ms. Edit Alexandra Uj M.D.
External Tutor	Ms. Viktória Jeney M.Sc., Ph.D., D.Sc.
	Ms. Dóra Pituk M.Sc., Ph.D.
Academic Advisor	Ms. Éva Katona M.Sc., Ph.D. habil.

DEPARTMENT OF MEDICAL CHEMISTRY

Egyetem tér 1., Debrecen, 4032, Tel: +36-52-412-345

E-mail: medchem@med.unideb.hu, Web: chemistry.med.unideb.hu

Full Professor, Head of Department	László Virág M.D., Ph.D., D.Sc.
Full Professor	Péter Bay M.Sc., Ph.D., D.Sc.
Professor Emeritus	Viktor Dombrádi M.Sc., Ph.D., D.Sc.
	Ferenc Erdődi M.Sc., D.Sc.
	Pál Gergely M.Sc., Ph.D., D.Sc., M.H.A.Sc.
Associate Professor	Ms. Anita Boratkó M.Sc., Ph.D.
	Csaba Hegedűs M.Sc., L.D.S., Ph.D.
	Ms. Beáta Lontay M.Sc., Ph.D.
	Ms. Krisztina Tar M.Sc., Ph.D.
	Ms. Karen Uray M.Sc., Ph.D.
Assistant Professor	Bálint Bécsi M.Sc., Ph.D.
	Máté Ágoston Demény M.D., Ph.D.
	Tibor Docsa M.Sc., Ph.D.

CHAPTER 11 UNIVERSITY CALENDAR

UNIVERSITY CALENDAR FOR PHARMACY PROGRAM 2026/2027 ACADEMIC YEAR
CRASH COURSE OF HUNGARIAN LANGUAGE: August 24, 2026 – September 4, 2026
JOINT OPENING CEREMONY FOR THE ACADEMIC YEAR: September 6, 2026

1st SEMESTER

REGISTRATION WEEK: August 31-September 6, 2026

Year	Course	Examination Period
Basic Medicine Course	September 7, 2026 – December 11, 2026 (14 weeks)	December 14, 2026 – January 29, 2027 (7 weeks)
1st year Pharmacy 2nd year Pharmacy 3rd year Pharmacy 4th year Pharmacy	September 7, 2026 – December 11, 2026 (14 weeks)	December 14, 2026 – January 29, 2027 (7 weeks)
5th year Pharmacy	July 13, 2026- September 11, 2026 (2 months) state exam practice prior to final exams September 14, 2026 – December 11, 2026 (13 weeks)	December 14, 2026 – January 22, 2027 (6 weeks)

2nd SEMESTER

REGISTRATION WEEK: February 1, 2027-February 7, 2027

SPRING BREAK: April 19, 2027-April 23, 2027

Year	Course	Examination Period
Basic Medicine Course	February 8, 2027 – May 21, 2027 (14 weeks)	May 24, 2027 – June 11, 2027 (4 weeks)
Basic Medicine Course II.	January 11, 2027-June 25, 2027 (23 weeks)	June 28, 2027– July 16, 2027 (3 weeks)
1st year Pharmacy 2nd year Pharmacy 3rd year Pharmacy 4th year Pharmacy	February 8, 2027 – May 21, 2027 (14 weeks)	May 24, 2027-July 9, 2027 (7 weeks)
5th year Pharmacy	January 25, 2027 – May 28, 2027 (4 months) state exam practice prior to final exams	June 3, 2027 (written state exam)

SUMMER PRACTICE

Year	Dates in 2027
2nd and 3rd year Pharmacy practice	July 12, 2027 – August 6, 2027 or July 19, 2027 – August 13, 2027 (4 weeks)

CHAPTER 12

ACADEMIC PROGRAM FOR THE BASIC MEDICINE COURSE

ACADEMIC PROGRAM FOR THE BASIC MEDICINE COURSE

Basic Medicine Course (BMC, Premedical Studies)

Duration of studies: 1 year (2 semesters)

The one-year premedical Basic Medicine Course is recommended to those students who do not have sufficient knowledge in Biology, Physics and Chemistry from high school. The requirements in these premedical science subjects are rigorous, thus it is recommended that students who need a period of preparation prior to beginning the General Medicine, Dentistry or Pharmacy Program join the Basic Medicine Course. Students successfully completing the course are directly admitted to their chosen program. In addition to the Basic Medicine Course starting each September, our University launches an Intensive BMC in January as well.

Class Behavior

Students must not use cell phones to talk or text during class. Cell phones must be switched off or kept in silence mode during class. In seminars, students will be expected to participate in seminar discussions. Students are encouraged to ask questions related to the topic of the lectures discussed, and participate in solving problems related to the topic of the seminar. Some professors will ask for students to volunteer information, but some professors call on students randomly. It is, thus, a good idea to come to class prepared so as not to be embarrassed in front of the class. Students should not disrupt the class by talking to each other. If one continues to disrupt the class, the student may be asked to leave. The usage of electronic devices, textbooks and any form of interaction between students during the tests is strictly forbidden. Electronic devices (cell phones, tablets, dictionaries, etc.), except for approved simple calculators, must not be within the reach (in pocket, in the desk, etc.) of students during tests. It is the students' responsibility to stow these items before the test begins without specific warning by the supervising teachers. Violation of these above mentioned regulations results in an immediate and unconditional dismissal from the program.

Requirements

The 2-semester course consists of lectures and seminars. Attending lectures is strongly recommended, attendance of seminars is compulsory and recorded. Student attendance at lectures is checked randomly throughout the year. Those who are absent will lose their eligibility for exemption and bonus points. Everyone must attend the seminars with the group designated by the Registrar's Office.

Absence can significantly affect your understanding and can have serious implications of progression in your studies. One might have a maximum of three seminar absences per semester to have the opportunity to get exemption. Students missing 4 seminars per semester cannot be exempted from the End of Semester Examination (ESE) or Final Examination (FE), regardless of their score reached on the Self Control Tests. Students missing 5 or more seminars per semester are dismissed from the course. Missed seminars cannot be made up, unless one obtains prior permission to be absent.

The knowledge of students will be tested 4 times during each semester using a written test system by **Self Control Tests (SCT)**. The first semester is ended with an **End of Semester Examination (ESE)** covering the topics of all lectures and seminars of the first semester. Three

dates will be set for the ESE during the winter examination period. Unsuccessful students may repeat the ESE twice (B and C chances). Students repeating the course must successfully pass the first semester either with exemption or at least with a score of 45% of ESE, otherwise their studies will be terminated. The ESE is not compulsory for non-repeater students and even who fail may continue their study in the second semester, however, they lose their chance to receive bonus points. Exam exemptions and bonus point policy are to improve the students' performance on SCTs and give them a chance to get exemption of the FE (described below) even with SCT scores lower than 30% in the first semester. Exact details of the exemption of ESE:

- one's average score of the three best first semester SCTs is at least 45%, AND
- (s)he successfully completed all the SCTs at least with 30% score, AND
- (s)he has a maximum of 3 seminar absences for each subject in the first semester.

The course ends with a **Final Exam (FE)** covering the whole material of the first and second semesters. A minimum of four FE dates will be set during the summer examination period. Unsuccessful students may repeat the FE twice (B and C chances, and the latter ends up with an oral examination part). Exemption from FE is offered for students who achieve excellent academic performance during their studies on the following base:

- the average score of the six best SCTs (out of 8) of the two semesters is at least 45%, AND
- passed all the SCTs with at least 30%, AND
- (s)he has a maximum of 3 seminar absences for a given subject per semester.

OR

- the average of the ESE score taken 3 times plus the scores of the 3 best SCTs in the 2nd semester is at least 45%, AND
- passed all the SCTs with at least 30%, AND
- (s)he has a maximum of 3 seminar absences for each subject per semester.

Bonus points will be added to the FE score (in %) of eligible students and calculated as follows:

The average of the ESE score three times and the best 3 2 nd semester SCTs OR the average of the best 6 SCTs	Bonus points
40.00-40.99	2
41.00-41.99	4
42.00-42.99	6
43.00-43.99	8
44.00-44.99	10

Students who could not meet the above described conditions for exemption during the two semesters must sit for the FE from the whole material of the first and second semesters. The participation shall be preceded by ID confirmation (i.e. student's card, passport or driving license) before all forms of tests.

Self Control Tests, End of Semester Exams, and Final Exams will be assessed as follows.

Percentage (%)	Mark
0 - 44.99:	fail (1)
45.00 - 64.99:	pass (2)
65.00 - 74.99:	satisfactory (3)

75.00 - 84.99: good (4)
85.00 - 100: excellent (5)
Absence for any reason counts as 0%.

Year, Semester: Basic Medicine Course 1st

Number of teaching hours:

Lecture: **60**

Seminar: **30**

1st week:

Lecture: 1-2. Introduction, requirements.

(Briefly - Standards of length, mass, time. Significant figures. Prefixes. Conversion of units. OVI), Trigonometry, coordinate systems. 3-4. Radians, vectors and scalars, geometry. Equation solving, Functions and graphing, exponents, scientific notation, logarithms, exponentials

Seminar: Math review 1 finishing with functions and graphing

2nd week:

Lecture: 5-6. Motion in one dimension, displacement, velocity, acceleration, motion diagrams. Freely falling objects.

7-8. Vectors and their properties. Components of vectors. Displacement, velocity and acceleration in two dimensions.

Seminar: Math review 2 exponentials, logarithms + lect 5-6

3rd week:

Lecture: 9-10. Motion in two dimensions. Projectile motion.

11-12. The laws of motion. Newton's First, Second and Third Law.

Seminar: Material related to lectures 7-10.

4th week:

Lecture: 13-14. Applications of Newton's Laws. Forces of friction.

15-16. Energy. Work. Kinetic energy and the work-energy theorem. Gravitational potential energy.

Seminar: Material related to lectures 11-14.

5th week:

Lecture: 17-18. Energy. Work. Kinetic energy and the work-energy theorem. Gravitational potential energy.

19-20. Spring potential energy. System and energy conservation. Power. Work done by varying forces.

Seminar: Material related to lectures 15-18.

6th week:

Lecture: 21-22. Angular speed and angular acceleration. Rotational motion under constant angular acceleration.

23-24. Centripetal acceleration. Newtonian gravitation. Kepler's laws.

Seminar: Material related to lectures 19-22.

7th week:

Lecture: 25-26. Torque and the two conditions for equilibrium. The center of gravity.

27-28. Rotational kinetic energy. Angular momentum.

Seminar: Material related to lectures 23-24.

8th week:

Lecture: 29-30. States of matter. Deformation of solids. The Young's, shear and bulk modulus. Density and pressure. Variation of pressure with depth. Pressure measurements.

31-32. Buoyant forces and Archimedes's principle. Fluids in motion. Equation of

continuity and Bernoulli's equation.

Seminar: Material related to lectures 25-28.

9th week:

Lecture: 33-34. Viscous fluid flow. Poiseuille's law, Circulation, blood pressure measurement, transport phenomena, diffusion, osmosis

35-36. Temperature and the zeroth law of thermodynamics. Thermometers and temperature scales. Thermal expansion of solids and fluids. Macroscopic description of an ideal gas. The kinetic theory of gases.

Seminar: Material related to lectures 29-32.

10th week:

Lecture: 37-38. Energy in thermal processes. Heat and internal energy.

39-40. Specific heat. Calorimetry. Latent heat and phase change.

Seminar: Material related to lectures 33-36

11th week:

Lecture: 41-42. The first law of thermodynamics. The second law of thermodynamics. Entropy. Refrigerators and heat pumps.

43-44. Elastic potential energy. Hook's law.

Simple harmonic motion. Motion of a pendulum.

Seminar: Material related to lectures 37-40.

12th week:

Lecture: 45-46. Waves. Frequency, amplitude and wavelength. Interference of waves.

Reflection of waves

47-48. Sound. Energy and intensity of sound waves. Doppler effect

Seminar: Material related to lectures 41-44.

13th week:

Lecture: 49-50. Ultrasound. Shock waves, standing waves. The ear and the principles of hearing.

51-52. Overview and summary of all topics

Seminar: Material related to lectures 45-48.

14th week:

Lecture: 53-56. Interactive seminar and preparation for the ESE.

Seminar: Interactive seminar and preparation for

the ESE.

Reading materials:

Serway/Vuille: College Physics.

10th edition. Cengage Learning, 2014. ISBN: 978-1285737027.

Gáspár R.: Physics for BMC students.

University of Debrecen,

Requirements

1. Lectures

Attendance of the lectures is strongly recommended. All material covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Some new concepts and ideas are discussed in the lectures only and are not present in the textbook.

2. Seminars

Topics of the seminars:

1st week: Information about requirements. Introduction to modern physics.

2nd to 29th weeks: The topics of the seminars follow the topics of the lectures with one or two weeks delay.

Attendance of the seminars is obligatory. With acceptable excuse students may miss a maximum of 4 (four) seminars. Students missing 5-7 seminars cannot be exempted from the End of Semester Examination or Final Examination, regardless of their score reached on the Self Control Tests. Students missing 8 (eight) or more seminars are excluded from the class. Students are encouraged to ask questions related to the topic of the lectures discussed, and participate in solving physical problems related to the topic of the seminar.

The course ends with a Final Exam (FE) in the summer examination period.

Exemption is offered for students who achieve excellent academic performance during their study term on the following base.

In each semester four Self Control Tests (SCTs) are organized. One will be exempted from the Final Examination if he/she achieves a minimum of 50% on each of the eight SCTs, and the average of the marks of the 3 best SCTs in both semesters is higher than 75%.

Unsuccessful students may repeat the ESE twice ("B" and "C" chances). Students who fail even the 3rd ESE ("C" chance) may continue the study in the second semester; however, they lose their chance to be exempted from the final examination.

If the result of the first semester ESE is Good (4) or Excellent (5), and the student is exempted (based on the result of the SCTs) in the second semester, he or she will be exempted from the FE.

Students who could not meet the above described conditions for exemption during the two semesters must sit for the FE from the whole material of the first and second semesters.

If a student successfully passed the exam but is not satisfied with the result he/ she may take a repeated "improvement exam". In one semester only one improvement exam can be done regardless

the number of subjects taken by the student.

Control tests, End of Semester Exams, and Final Exams will be scored as follows.

Percentage: Mark

Tantárgyi tematikák a kötelező tárgyakhoz

0 – 49.99 fail (1)

50.00 - 64.99 pass (2)

65.00 – 74.99 satisfactory (3)

75.00 – 84.99 good (4)

85.00 – 100 excellent (5)

Absence counts as 0%.

Subject: **INTRODUCTION TO MEDICAL CHEMISTRY I.**

Year, Semester: Basic Medicine Course, 1st

Number of teaching hours:

Lecture: **56**

Seminar: **28**

1st week:

Lecture:

Introduction to Chemistry. Symbols of the elements. Physical and chemical properties
The SI system of measurement

2nd week:

Lecture:

The atomic theory. Structure of the atom, nuclear arithmetic
Mixtures and chemical compounds. Chemical formulas. Naming chemical compounds.

3rd week:

Lecture:

Atomic, molecular and molar mass relationships.
Percent composition and empirical/molecular formulas. Chemical equations, stoichiometry

4th week:

Lecture:

Summary of general chemistry 1
Test #1

5th week:

Lecture:

The electromagnetic spectrum. Atomic spectra. The Bohr model of hydrogen atom.
The quantum mechanical model of the atom.
Electron configurations and the periodic table.
Classification of the elements

6th week:

Lecture:

Periodic properties
Chemical bonds: metallic, ionic, and covalent bon. Electron-dot structures

7th week:

Lecture:

VSEPR and valence bond theory
Intermolecular forces

8th week:

Lecture:

Summary of general chemistry 2
Test #2

9th week:

Lecture:

The gaseous state
Liquid and solid state, phase changes. The chemistry of water

10th week:

Lecture:

Solutions. Electrolytes and nonelectrolytes
Chemical equilibrium

11th week:

Lecture:

Summary of general chemistry 3

Test #3

12th week:

Lecture:

Acids and bases 1
Acids and bases 2

13th week:

Lecture:

Thermochemistry: internal energy and state functions. Enthalpy. Hess's law
Redox reactions. Activity series of the elements. Galvanic cells

14th week:

Lecture:

Summary of general chemistry 4

Test #4

Subject: INTRODUCTION TO MEDICAL CHEMISTRY II.

Year, Semester: Basic Medicine Course, 2nd

Number of teaching hours:

Lecture: **56**

Seminar: **28**

1st week:

Lecture:

The main-group elements. s-, p-, d-block metals
Nonmetals: hydrogen, halogens and noble gases

2nd week:

Lecture:

Nonmetals: oxygen and sulfur
Nonmetals: nitrogen, phosphorus and carbon

3rd week:

Lecture:

Test #5

Covalent bonding in organic compounds.
Classification of organic compounds

4th week:

Lecture:

Alkanes. Nomenclature and isomerism of alkanes
Reactions of alkanes. Cycloalkanes

5th week:

Lecture:

Unsaturated hydrocarbons
Aromatic compound: structure and properties

6th week:

Lecture:

Heteroaromatic compounds. Reactions of benzene and its derivatives
Organic halogen compounds

7th week:

Lecture:

Summary of organic chemistry 1

Test #6

8th week:

Lecture:

Alcohols and phenols
Ethers, thioethers.

9th week:

Lecture:

Organic sulfur compounds
Aldehydes, ketones and quinones

10th week:

Lecture:

Nitrogen containing organic compounds:
aliphatic amines
Nitrogen containing organic compounds:
heterocyclic nitrogen compounds. Amines
of biological importance

11th week:

Contact person: Dr. Endre Kókai, Department of Medical Chemistry

Erdődi, Csontos: Organic chemistry for premedical students (2010)

Lecture:

Summary of organic chemistry 2

Test #7

12th week:

Lecture:

Carboxylic acids
Substituted carboxylic acids. Carboxylic
acid derivatives: esters and amides

13th week:

Lecture:

Carboxylic acid derivatives: halides and
anhydrides; salts and detergents
Stereochemistry

14th week:

Lecture:

Summary of organic chemistry 3

Test #8

CHAPTER 13

ACADEMIC PROGRAM FOR THE SHORT BASIC MEDICINE COURSE

ACADEMIC PROGRAM FOR THE INTENSIVE BASIC MEDICINE COURSE

Intensive Basic Medicine Course (Intensive BMC, Premedical Studies)

Duration of studies: 1 semester

The six-month intensive premedical Basic Medicine Course is recommended to those students who do not have thorough knowledge in Biology, Physics and Chemistry from high school. The requirements of these condensed premedical science subjects are very rigorous, thus preparation prior to the beginning the General Medicine, Dentistry or Pharmacy Program is recommended. Students successfully completing the course are directly admitted to their chosen program. The Intensive Basic Medicine Course starts in January.

Class Behavior

Students should not use cell phones to talk or text during class. Cell phones must be switched off or kept in silence mode during class. In seminars, students will be expected to participate in seminar discussions. Students are encouraged to ask questions related to the topic of the lectures discussed, and participate in solving problems related to the topic of the seminar. Some professors will ask for students to volunteer information, but some professors call on students randomly. It is, thus, a good idea to come to class prepared so as not to be embarrassed in front of the class. Students should not disrupt the class by talking to each other. If one continues to disrupt the class, the student may be asked to leave. The usage of electronic devices, textbooks and any form of interaction between students during the tests is strictly forbidden. Electronic devices (cell phones, tablets, dictionaries, etc.), except for approved simple calculators, must not be within the reach (in pocket, in the desk, etc.) of students during tests. It is the students' responsibility to stow these items before the test begins without specific warning by the supervising teachers. Violation of these above mentioned regulations results in an immediate and unconditional dismissal from the program.

Requirements

The course consists of lectures and seminars. Attending lectures is strongly recommended, attendance of seminars is compulsory and recorded. Attending lectures is strongly recommended, attendance of seminars is compulsory and recorded. Student attendance at lectures is checked randomly throughout the year. Those who are absent will lose their eligibility for exemption and bonus points. Everyone must attend the seminars with the group designated by the Registrar's Office.

Absence can significantly affect your understanding and can have serious implications for progression in your studies. One might have a maximum of six seminar absences to have the opportunity to get exemption. Students missing 7-8 seminars cannot be exempted from the Final Examination (FE), regardless of their score reached on the Self Control Tests. Students omitting 9 or more seminars are dismissed from the course. Missed seminars cannot be made up unless one obtains prior permission to be absent.

The knowledge of the students will be tested 6 times during the entire course using a

written test system by **Self Control Tests (SCT)**. The course ends with a **Final Exam (FE)** from the whole material of the course and a minimum of four FE dates will be set during the summer examination period. Unsuccessful students may repeat the FE twice (B and C chances, and the latter ends up with an oral examination part). Exam exemption and bonus point policy are used to improve the students' performance on SCTs. Exact details of these policies will be described below.

Exemption from FE is offered for students who achieve excellent academic performance during their studies under the following circumstances:

- the average score of the five best SCTs (out of 6) is at least 45%, AND
- passed all the SCTs with at least 30%, AND
- (s)he has a maximum of 6 seminar absences for a given subject.

Bonus points will be added to the FE score of eligible students and calculated as follows:

The average of the best 6 SCTs	Bonus points
40.00-40.99	2
41.00-41.99	4
42.00-42.99	6
43.00-43.99	8
44.00-44.99	10

Students who could not meet the above described conditions for exemption must sit for the FE from the whole material of the course. The participation shall be preceded by ID confirmation (i.e. student's card, passport or driving license) before all forms of tests. Self Control Tests, End of Semester Exams, and Final Exams will be assessed as follows.

Percentage (%)	Mark
0 - 44.99:	fail (1)
45.00 - 64.99:	pass (2)
65.00 - 74.99:	satisfactory (3)
75.00 - 84.99:	good (4)
85.00 - 100:	excellent (5)
Absence for any reason counts as 0%.

Subject: **INTRODUCTION TO BIOPHYSICS**

Year, Semester: Intensive Basic Medicine Course

Number of teaching hours:

Lecture: **96**

Seminar: **144**

1st week:

Lecture 1-2: Introduction to modern physics. Standard of lengths, mass, time. Conversion of units. Useful mathematics. Trigonometry. Motion in one dimension, displacement, velocity, acceleration, motion diagrams.

2nd week:

Lecture 3-4: Freely falling objects. Vectors and their properties. Components of vectors. Displacement, velocity and acceleration in two dimensions. Motion in two dimensions. Relative velocity.

3rd week:

Lecture 5-6: The laws of motion.

Newton's First, Second and Third Law.

Application of Newton's Laws. Forces of friction.

4th week:

Lecture 7-8: Kinetic energy and the work-energy theorem. Gravitational potential energy. Spring potential energy. System and energy conservation. Power. Work done by varying forces.

5th week:

Lecture 9-10: Momentum and impulse. Conservation of momentum. Collisions. Elastic and inelastic collisions.

6th week:

Lecture 11-12: Angular speed and angular acceleration. Rotational motion under constant angular acceleration. Centripetal acceleration. Newtonian gravitation. Kepler's laws.

7th week:

Lecture 13-14: Torque and the two conditions for equilibrium. The center of gravity. Rotational kinetic energy. Angular momentum.

8th week:

Lecture 15-16: States of matter. Deformation of solids. The Young's's, shear and bulk modulus. Density and pressure. Variation of pressure with depth. Pressure measurements. Buoyant forces and Archimedes's principle.

9th week:

Lecture 17-18: Temperature and the zeroth law of thermodynamics. Thermometers and temperature scales. Thermal expansion of solids and fluids. Macroscopic description of an ideal gas. The kinetic theory of gases.

10th week:

Lecture 19-20: Energy in thermal processes. Heat and internal energy. Specific heat. Calorimetry. Latent heat and phase change. The first law of thermodynamics.

11th week:

Lecture 21-22: The second law of thermodynamics. Entropy. Refrigerators and heat pumps. Elastic potential energy. Hook's law. Simple harmonic motion. Motion of a pendulum.

12th week:

Lecture 23-24: Waves. Frequency,

amplitude and wavelength. Interference of waves. Reflection of waves. Sound. Energy and intensity of sound waves. Shock waves, standing waves, standing waves. Doppler effect. The ear and the principles of hearing.

13th week:

Lecture 26-27: Properties of electric charges. Insulators and conductors. Coulomb's law. Electric field. Electric field lines. Electric flux and Gauss's law.

14th week:

Lecture 28-29: Electrical energy and capacitance. The parallel plate capacitor. Combinations of capacitors. Energy stored in capacitors. Capacitors with dielectric.

15th week:

Lecture 30-31: Electric current. Current and voltage measurements in circuits. Resistance and Ohm's law. Resistivity, temperature variation of resistance. Semiconductors and superconductors. Electrical activity of the heart. Defibrillators.

16th week:

Lecture 32-33: Direct current circuits. Resistors in parallel and series. Kirchhoff's rules and complex DC circuits. RC circuits. Conduction of electrical signals by neurons.

17th week:

Lecture 34-35: Magnetism. Magnetic field. Earth's magnetic field. Magnetic force on current carrying conductors. Torque on a current loop and electric motors. Magnetic field of a long straight wire and Ampere's law. Magnetic field between two parallel conductors. Magnetic field of loops and solenoids.

18th week:

Lecture 36-37: Induced emf and magnetic flux. Faraday's law of induction. Motional emf. Lenz's law. Generators. Self-inductance RL circuits.

19th week:

Lecture 38-39: Alternating current. Resistors, capacitors and inductors in AC circuits. The transformer. Properties of electromagnetic waves. The spectrum of electromagnetic waves.

20th week:

Lecture 40-41: The nature of light. Reflection, refraction and dispersion. Prisms. The rainbow. Huygen's principle. Total internal reflection and its medical applications.

21st week:

Lecture 42-43: Lenses and mirrors. Flat mirrors. Images formed by spherical mirrors. Thin lenses. Images formed by lenses. Lens aberrations. Wave optics. Conditions for interference, polarization of light. Diffraction. The camera, the simple magnifier, the compound microscope, the telescope and the eye.

23rd week:

Lecture 44-45: Quantum physics. Blackbody radiation, photoelectric effect, generation of X-ray. Some properties of the nuclei. Binding energy. Radioactivity, the decay processes. Medical application of radioactivity.

CHAPTER 14

ACADEMIC PROGRAM FOR CREDIT SYSTEM

ACADEMIC PROGRAM FOR CREDIT SYSTEM

The introduction of the credit system became compulsory in every Hungarian university, including the University of Debrecen by September, 2003. The aim of the credit system is to ensure that the students' achievements can be properly and objectively evaluated both quantitatively and qualitatively.

A credit is a relative index of cumulative work invested in a compulsory, a required elective or a freely chosen subject listed in the curriculum. The credit value of a course is based upon the number of lectures, seminars and practical classes of the given subject that should be attended or participated in (so called "contact hours"), and upon the amount of work required for studying and preparing for the examination(s). Together with the credit(s) assigned to a particular subject (quantitative index), students are given grades (qualitative index) on passing an exam/course/class. The credit system that has been introduced in Hungary meets the standards of the European Credit Transfer System (ECTS). The introduction of the ECTS promotes student mobility, facilitates more effective organization of students' exchange programs aimed at further education in foreign institutions, and allows recognition of the students' work, studies and achievements completed in various foreign departments by the mother institution. Credit-based training is flexible. It provides a wider range of choice, enables the students to make progress at an individual pace, and it also offers students a chance to study the compulsory or required subjects at a different university, even abroad. Owing to the flexible credit accumulation system, the term "repetition of a year" does not make sense any longer. It should be noted, however, that students do not enjoy perfect freedom in the credit system either, as the system does not allow students to randomly include subjects in their curriculum or mix modules. Since knowledge is based on previous studies, it is imperative that the departments clearly and thoroughly lay down the requirements to be met before students start studying a subject.

The general principles of the credit system are the following:

1. Students can be given their degree if, having met other criteria as well, they have collected 300 credits during their studies. Considering the recommended curriculum, this can be achieved in five years.
2. According to the credit regulations, students should obtain an average of 30 credits in each semester.
3. The criterion of obtaining 1 credit is to spend 30 hours (including both contact and non-contact hours) studying the given subject.
4. Credit(s) can only be obtained if students pass the exam of the given subject.

5. Students accumulate the required amount of credits by passing exams on compulsory, required elective and freely chosen subjects. Completion of every single compulsory credit course is one of the essential prerequisites of getting a degree. Courses belonging to the required elective courses are closely related to the basic subjects, but the information provided here is more detailed, and includes material not dealt with in the frame of the compulsory courses. Students do not need to take all required elective courses, but they should select some of them wisely to accumulate the predetermined amount of credits from this pool. Finally, a certain amount of credits should be obtained by selecting from the freely chosen courses, which are usually not related to the basic (and thus mandatory) subjects, but they offer a different type of knowledge.

6. Total of 300 credits should be accumulated by completing the compulsory and required elective courses (285 credits), and freely chosen courses (15 credits).

7. According to the qualification requirements, professional (compulsory and required elective) courses fall into three modules. The basic module provides the theoretical basis of medicine, and ensures that the necessary practical skills are developed. The preclinical module lays down the foundations of clinical knowledge, while in the clinical module the students are taught clinical medicine, and they attend practical classes to ensure proper command of the medical procedures. The credits accumulated in the different modules for compulsory and required courses should show the following distribution: basic module: 55-75, preclinical module: 55-75, and clinical module: 110-156 credits.

8. The pilot curricula show the recommended pacing of compulsory courses. If these courses are carefully supplemented with credits obtained from the necessary number of required elective and freely chosen courses, students can successfully accumulate the credits required for their degree within 10 semesters.

9. There are 16 compulsory final examinations in the curriculum.

10. The diploma work is worth 10 credits.

11. Regulations concerning the training of students in the credit system prescribe a minimum amount of credits for certain periods as outlined in the Rules and Regulations for English Program Students.

12. Evaluation of the students' achievements needed for grants or applications is described in Rules and Regulations for English Program Students.

13. Further information is available in the Rules and Regulations for English Program Students.

We very much hope that the system of training will contribute to the successful completion of your studies.

We wish you good luck with your university studies.

Compulsory courses for the 1. year

Sem	Subjects	Neptun code	L	S	P	Exam	Crd	Prerequisites of taking the subject
1	Bioethics	GYBIOE0E23EN	28			ESE	1	None
1	Botany Practice	GYGYNT0G23EN			28	AW5	2	None
1	Botany Theory	GYGYNT0E23EN	28			ESE	2	None
1	General Chemistry Practice	GYALTK0G23EN			42	AW5	3	None
1	General Chemistry Theory	GYALTK0E23EN	42	28		ESE	5	None
1	General Communication	GYAKOM0G23EN			14	AW5	1	None
1	Hungarian Crash Course	AOG261008			36	AW5	0	None
1	Hungarian Language I/1.	GYHUNL11G23EN			24	AW5	2	Hungarian Crash Course
1	Latin Language I.	GYGYLT1G23EN			28	AW5	1	None
1	Mathematics	GYMATE0K23EN	14		28	ESE	3	None
1	Pharmaceutical Anatomy I.	GYANAT1K23EN	28		28	ESE	4	None
1	Pharmaceutical Biology I.	GYBIOL1K23EN	21		28	ESE	3	None
1	Pharmacy Propedeutics	GYPROP0E23EN	28			ESE	1	None
1	Physics	GYFIZI0E23EN	14			ESE	1	None

Compulsory courses for the 1. year

Sem	Subjects	Neptun code	L	S	P	Exam	Crd	Prerequisites of taking the subject
2	Biophysics	GYBFIZ0K24EN	14		15	ESE	2	Mathematics, Physics
2	Biostatistics	GYBSTA0E24EN		14		ESE	1	Mathematics, Physics
2	Colloid and Surface Chemistry Theory	GYKOLK0E23EN	14			ESE	1	Mathematics, Physics, General Chemistry Theory
2	Hungarian Language I/2.	GYHUNL12G23EN			28	AW5	2	Hungarian Crash Course, Hungarian Language I/1.
2	Inorganic Chemistry Practice	GYSTLK0G23EN			42	AW5	3	General Chemistry Theory, General Chemistry Practice
2	Inorganic Chemistry Theory	GYSTLK0E23EN	28			ESE	2	General Chemistry Theory
2	Latin Language II.	GYGYLT2G23EN			28	AW5	1	Latin Language I.
2	Organic Chemistry Practice I.	GYSVSK1G23EN		14	42	AW5	3	General Chemistry Theory, General Chemistry Practice
2	Organic Chemistry Theory I.	GYSVSK1E23EN	56			ESE	4	General Chemistry Theory, General Chemistry Practice
2	Pharmaceutical Anatomy II.	GYANAT2K23EN	21		21	FE	3	Pharmaceutical Anatomy I.
2	Pharmaceutical Biology II.	GYBIOL2K23EN	35		28	FE	4	Pharmaceutical Biology I.
2	Physical Chemistry Theory	GYFIZK0E23EN	28	14		ESE	3	Mathematics, Physics, General Chemistry Theory

Compulsory courses for the 2. year

Sem	Subjects	Neptun code	L	S	P	Exam	Crd	Prerequisites of taking the subject
1	Analytical Chemistry Theory	GYANAK0E23EN	42			ESE	3	Inorganic Chemistry Theory and Practice, Physical Chemistry Theory
1	Colloid and Surface Chemistry Practice	GYKOLK0G23EN			28	AW5	2	Colloid and Surface Chemistry Theory
1	Human Physiology I.	GYHETN1E23EN	42	14		ESE	4	Pharmaceutical Anatomy II, Pharmaceutical Biology I.
1	Hungarian Language II/1.	GYHUNL21G23EN			28	AW5	2	Hungarian Language I/2.
1	Organic Chemistry Practice II.	GYSVSK1G23EN			42	AW5	3	Organic Chemistry Theory I., Organic Chemistry Practice I.
1	Organic Chemistry Theory II.	GYSVSK2E23EN	56			FE	4	Organic Chemistry Theory I., Organic Chemistry Practice I.
1	Pharmaceutical Biochemistry I.	GYGYBK1E23EN	26		4	ESE	2	Biophysics, Organic Chemistry Theory I., Pharmaceutical Biology II.
1	Pharmaceutical Technology Theory I.	GYTECH1E23EN	28			ESE	2	Physical Chemistry Theory

CHAPTER 15

PUBLIC PHARMACY PRACTICES AND STATE EXAM PRACTICES

Public Pharmacy Practice after 2nd and 3rd year

Syllabus for the practice in a public pharmacy after second and third year

Duration of practice: 4 weeks, 8 hours daily, from which 2 hours may be spent preparing individually

The student is required to gain proficiency in the following areas during his /her practice at a public pharmacy, and subsequently acquire knowledge about pharmacy operation including dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Main requirements for the student:

Before practice he/she should accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

He/she is expected to follow the guidance of the pharmacist in charge of the training.

Skills expected from the student after the completion of practice:

practical application of the theoretical knowledge obtained during his / her studies

he / she is expected to know the premises and the assets of the public pharmacy and be able to get information from manuals and scientific journals used during his / her work

he / she is expected to learn about the work activities of a public pharmacy

he / she is required to have an appropriate working relationship with the co-workers at the pharmacy

he / she is expected to know the rules and regulations pertaining to the operation of pharmacies

he/ she is required to explore the possibilities of communicating with patients

The student's tasks during the practice:

Under the supervision of the pharmacist in charge of the training he / she participates in the following activities:

1. Preparation of medicine. In the process he / she is required to learn:

How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities

The legal possibilities of changing the original prescription

The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)

Documentation of preparation, and administrative obligations

Storage of materials, processing of basic formulations and subsequent administrative obligations

Formulations of the compendium and FoNo

2. Operation and quality assurance. In the process he / she is required to learn for the basic knowledgements:

administrative work in the pharmacy
standard procedures for workflow
how to check and document workflow
the rules pertaining to the examining and sampling incoming medications, documentation of examinations

3. Drug dispense. In the process he / she is required to learn for the basic knowledgements:
how to check the content and layout of the prescription
the database of nutrition complements and medicinal formulae
adequate application of the computer program. He / she is expected to get acquainted with the process and documentation of drug dispensing, and communication with patients
the notion of pharmacy care and its practical ramifications

4. Medicine ordering. In the process he / she is required to learn for the basic knowledgements:
how to order medicine
about narcotics and activities involving their handling
the rules pertaining to hazardous waste

Evaluation:

Keeping an electronic notebook: description of one syllabus-related practical problem in half / one page in every two weeks.

The pharmacist in charge of the training checks the work and description every second week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean's Office according to the rules of the place of training.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

Student evaluation:

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

State Exam Practice II. Pharmaceutical Business Administration

1. Syllabus for the practice in a public pharmacy before final examination

Duration of the practice is 2+3 months, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Main requirements for the student:

He/she should accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

He/she is expected to follow the guidance of the pharmacist in charge of the training.

The expected skills made on the student after completion of the practice:

practical application of the theoretical knowledge obtained during his / her studies,

the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,

he / she is required to have an appropriate working relationship with the co-workers at the pharmacy

he/ she is expected to communicate with the patients in an appropriate way,

he / she is required to appropriately inform and give advice in connection with the patients'

questions regarding self-healing and preparations without prescription (drugs and other products),

He / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

The student's tasks during the practice:

Under the supervision and instructions of the pharmacist in charge of the training he / she participates in the following activities:

1. Drug Dispense. In the process he / she is required to solve the following problems:

how to check the content and layout of the prescription

the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name,

appropriate patient information knowing the effects and adverse effects of drugs,

recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement),

characteristic/obligatory cases and methods of medical information and consultation,

duties in connection with the known/identified adverse effects of drugs,

adherence control and means of correction, common uses,

the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose,

the possibilities and rules of access to data regarding the patients' previous medication (OEP database),

the database of nutrition complements and medicinal formulae

proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to solve the following problems:

How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities

The legal possibilities of changing the original prescription

The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)

Documentation of preparation, and administrative obligations

Storage of materials, processing of basic formulations and subsequent administrative obligations

Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to solve the following problems:

administrative work in the pharmacy

the rules concerning the staff of the pharmacy; qualification, labor law requirements,

standard procedures for workflow

how to check and document workflow

the rules pertaining to the examining and sampling incoming medications,

documentation of examinations

4. Medication management. In the process he / she is required to solve the following problems:
 aspects of inventory management,
 how to order medicine
 duties in case of waste products, returned items, damage,
 withdrawal of products from circulation,
 duties regarding shift of prices,
 closings: daily, weekly, periodic as well as schedule of OEP reports,
 importance and practice of supervision of prescriptions,
 about narcotics and activities involving their handling,
 the rules pertaining to hazardous waste.

Evaluation:

Keeping an electronic workbook: the description of one practical problems in half/one page in every two weeks. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean's Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

2. Syllabus for the practice in a hospital pharmacy before final examination

Duration of the practice is 1 month, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a hospital pharmacy during their practice regarding the characteristics of supplying medicine: system of in-patient care and medicines financing, medication management (acquisition and selling), preparation of individual and multi-dose medicine, therapeutic consultation, system of quality assurance.

Main requirements for the student:

He/she should accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

Skills expected from the student after the completion of practice:

practical application of the theoretical knowledge obtained during his / her studies

the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,

appropriate communication with the co-workers at the pharmacy and the qualified and unqualified employees of the hospital,
appropriate communication with the in-patients.

The student's tasks during the practice:

He/she is required to participate in the following activities settled down in the regulations regarding hospital pharmacies (41/2007 Eü M) under the supervision and instruction of the pharmacist in charge of the training:

1. Ordering medicines / storage / dispensing to departments. In the process he / she is required to learn:
various ways of supplying medicines: „central procurement”, private tenders, supplying medicines in addition to procurement,
the IT system of medication management,
the ways of fulfilling the medicine claims of the departments / patients,
registry of controlled preparations,
procedure of fulfilling the individual import and „off-label” claims.
2. Individual and multi-dose sterile and non-sterile preparation of medicine. In the process he / she is required to learn:
the FoNo and manual drug making,
cytotoxic preparations, preparation of mixture infusion,
the possible solutions for individual needs.
3. Therapeutic consultant tasks. In the process he / she is required to learn:
therapeutic protocols (the circle of medicines which can be selected primarily),
the informational activity of the pharmacy; medicine-substitution, mistakes in connection with medication, side effects, monitoring, signaling, and reporting interactions.
4. Operation / quality assurance. In the process he / she is required to learn:
the place of the pharmacy in the in-patient institutional hierarchy,
the financing system of the in-patient care; HBCS, the place of the medicine in the HBCS,
the planning and documentation of dispensing in the in-patient departments,
the special techniques for subsidizing medication (itemized financing, individual equity, charities),
the aim and management of establishing a list of basic medicines,
the reason for medicine shortages and the handling of it,
duties in connection with the medicines of clinical medicine trials,
the participation of the pharmacy in hospital board meeting and work-groups
(pharmacotherapeutic, nutritional, etc.),
job descriptions, duties and competences,
plans for further trainings, the system of pharmaceutical reporters and professional meetings.

Evaluation:

Keeping an electronic workbook: the description of one practical problems in a half/one page in every two weeks. One of them should describe a therapeutic question in direct connection with the patient, the other topic can be chosen from the three other areas (supplying medicine, making of drugs, operation, making of drugs). The descriptions made during the practice should be concerned

with all the areas of the activities in a pharmacy. The instructing pharmacist checks the work and description weekly and evaluates them on a scale of 5. He/she should send the electronic workbook to the Dean's Office in accordance with the rules of the training location.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

Student evaluation:

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

State Exam Practice II. Pharmaceutical Management, Quality Assurance

1. Syllabus for the practice in a public pharmacy before final examination

Duration of the practice is 2+3 months, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Requirements for the student:

Accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

He/she is expected to follow the guidance of the pharmacist in charge of the training.

The expected skills made on the student after completion of the practice:

practical application of the theoretical knowledge obtained during his / her studies,
the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,

he / she is required to have an appropriate working relationship with the co-workers at the pharmacy

he/ she is expected to communicate with the patients in an appropriate way,

he / she is required to appropriately inform and give advice in connection with the patients'

questions regarding self-healing and preparations without prescription (drugs and other products),

He / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

The student's tasks during the practice:

Under the supervision and instructions of the pharmacist in charge of the training he / she participates in the following activities:

1. Drug Dispense. In the process he / she is required to learn:

how to check the content and layout of the prescription

the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of

international non-proprietary name,
 appropriate patient information knowing the effects and adverse effects of drugs,
 recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement),
 characteristic/obligatory cases and methods of medical information and consultation,
 duties in connection with the known/identified adverse effects of drugs,
 adherence control and means of correction, common uses,
 the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose,
 the possibilities and rules of access to data regarding the patients' previous medication (OEP database),
 the database of nutrition complements and medicinal formulae
 proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:

How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities

The legal possibilities of changing the original prescription

The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)

Documentation of preparation, and administrative obligations

Storage of materials, processing of basic formulations and subsequent administrative obligations

Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to learn:

administrative work in the pharmacy

the rules concerning the staff of the pharmacy; qualification, labor law requirements,

standard procedures for workflow

how to check and document workflow

the rules pertaining to the examining and sampling incoming medications,

documentation of examinations

4. Medication management. In the process he / she is required to learn:

aspects of inventory management,

how to order medicine

duties in case of waste products, returned items, damage,

withdrawal of products from circulation,

duties regarding shift of prices,

closings: daily, weekly, periodic as well as schedule of OEP reports,

importance and practice of supervision of prescriptions,

about narcotics and activities involving their handling,

the rules pertaining to hazardous waste.

Evaluation:

Keeping an electronic workbook: the description of one practical problems in half/one page in every two weeks. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic

notebook to the Dean's Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

Student evaluation:

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

2. Syllabus for the practice in a hospital pharmacy before final examination

Duration of the practice is 1 month, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a hospital pharmacy during their practice regarding the characteristics of supplying medicine: system of in-patient care and medicines financing, medication management (acquisition and selling), preparation of individual and multi-dose medicine, therapeutic consultation, system of quality assurance.

Requirements for the student:

Accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

Skills expected from the student after the completion of practice:

practical application of the theoretical knowledge obtained during his / her studies

the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,

appropriate communication with the co-workers at the pharmacy and the qualified and unqualified employees of the hospital,

appropriate communication with the in-patients.

The student's tasks during the practice:

He/she is required to participate in the following activities settled down in the regulations regarding hospital pharmacies (41/2007 Eü M) under the supervision and instruction of the pharmacist in charge of the training:

1. Ordering medicines / storage / dispensing to departments. In the process he / she is required to learn:

various ways of supplying medicines: „central procurement”, private tenders, supplying medicines in addition to procurement,

the IT system of medication management,

the ways of fulfilling the medicine claims of the departments / patients,

registry of controlled preparations,

procedure of fulfilling the individual import and „off-label” claims.

2. Individual and multi-dose sterile and non-sterile preparation of medicine. In the process he / she

is required to learn:

the FoNo and manual drug making,
cytotoxic preparations, preparation of mixture infusion,
the possible solutions for individual needs.

3. Therapeutic consultant tasks. In the process he / she is required to learn:
therapeutic protocols (the circle of medicines which can be selected primarily),
the informational activity of the pharmacy; medicine-substitution, mistakes in connection with
medication, side effects, monitoring, signaling, and reporting interactions.

4. Operation / quality assurance. In the process he / she is required to learn:
the place of the pharmacy in the in-patient institutional hierarchy,
the financing system of the in-patient care; HBCS, the place of the medicine in the HBCS,
the planning and documentation of dispensing in the in-patient departments,
the special techniques for subsidizing medication (itemized financing, individual equity, charities),
the aim and management of establishing a list of basic medicines,
the reason for medicine shortages and the handling of it,
duties in connection with the medicines of clinical medicine trials,
the participation of the pharmacy in hospital board meeting and work-groups
(pharmacotherapeutic, nutritional, etc.),
job descriptions, duties and competences,
plans for further trainings, the system of pharmaceutical reporters and professional meetings.

Evaluation:

Keeping an electronic workbook: the description of one practical problems in a half/one page every two weeks. One of them should describe a therapeutic question in direct connection with the patient, the other topic can be chosen from the three other areas (supplying medicine, making of drugs, operation, making of drugs). The descriptions made during the practice should be concerned with all the areas of the activities in a pharmacy. The instructing pharmacist checks the work and description weekly and evaluates them on a scale of 5. He/she should send the electronic workbook to the Dean's Office in accordance with the rules of the training location.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

Student evaluation:

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

CHAPTER 16

ACADEMIC PROGRAM FOR THE 1ST YEAR

Department of Anatomy, Histology and Embryology

Subject: **PHARMACEUTICAL ANATOMY I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **28**

Practical: **28**

1st week:

Lecture: 1. Covering and lining epithelia. Glandular epithelium. 2. Connective tissues, Adipose tissue. 3. Cartilage. Bone

Practice: -

2nd week:

Lecture: 1. Bone formation. Muscle tissue. 2. Blood vessels. Blood. 3. Bone marrow and blood formation.

Practice: Histology: Histology of epithelial tissues 1 Endothel (small intestine, HE). 2. Columnar epithelium (small intestine, brush border, HE) 3. Pseudostratified epithelium with cilia (trachea, HE) 4. Stratified squamos non-keratinizing epithelium (oesophagus, HE) 5. Stratified squamos keratinizing epithelium (fingertip, HE) 6. Sebaceous, sweat and apocrine glands (axillary skin, HE) 7. Mucous and serous glands (submandibular gland, HE)

3rd week:

Lecture: Histology of lymphatic organs I. 2. Histology of lymphatic organs II. 3. Fertilization. Cleavage. Gastrulation.

Practice: Histology: Connective tissue. Adipose tissue. 1. Fibroblasts (healing wound, HE) 2. Mast cell (healing wound, toluidine blue) 3. Macrophages (skin, trypane blue-nuclear fast red) 4. Collagen fiber (colon, HE) 5. Elastic fiber (aorta, orcein) 6. Reticular fiber (liver, AgNO₃

impregnation). **Demonstration:** 1. Mesenchyme (umbilical cord, HE) 2. Adipocytes (suprarenal gland, HE)

4th week:

Lecture: 1. Differentiation of the ectoderm and mesoderm. 2. Differentiation of the entoderm, folding of the embryo. Fetal membranes. Placenta. The fetal period. Twins.

Practice: Histology: Cartilage. Bone. 1. Hyaline cartilage (trachea, HE) 2. Elastic cartilage (epiglottis, orcein) 3. Fibrous cartilage and bone (knee joint, HE) 4. Bone, cross-section (Schmorl's stain).

5th week:

Lecture: 1. Osteology and arthrology 2. The upper limb. The lower limb.

Practice: Histology: Bone formation. Muscle tissue. 1. Enchondral ossification epiphyseal growth plate (knee joint, HE) 2. Skeletal muscle (HE) 3. Smooth muscle (small intestine, HE) 4. Cardiac muscle (PTAH). **Demonstration:** Skeletal muscle (ironhematoxylin)

6th week:

Lecture: -

Practice: Histology: Blood vessels. Blood. Bone marrow. Blood formation. 1. Elastic artery (orcein) 2. Muscular artery and vein (HE) 3. Arteriole, venule, capillary (colon, HE) 4. Blood

smear (May-Grünwald-Giemsa) 5. Bone marrow (HE).

Practice: Anatomy: Upper and lower limbs. The bones, joints, muscles, blood vessels and nerves of the upper limb. Sites of venous injections and measurement of blood pressure. Bones, joints, ligaments and membranes of the pelvis. The structure and function of the pelvic girdle. The bones, joints, muscles, blood vessels and nerves of the lower limb. Sites of muscular injections. Femoral canal.

7th week:

Lecture: CONSULTATION

Practice: Histology: Histology of lymphatic organs. 1. Thymus (HE) 2. Lymph node (HE) 3. Spleen (HE) 4. Palatine tonsil (HE).

Demonstration: Lymphatic follicle (colon, HE)

8th week:

Lecture: 1. The heart. 2. Circulatory system. The vascular system of the embryo.

Practice: 1st mid- semester test

9th week:

Lecture: 1. The trachea, lungs and pleura. Histology of the lung. Development of the lung and heart. 2. The oesophagus. The stomach.

Practice: Anatomy: Anatomy of the heart and the respiratory system. The structure of the wall of the thorax. Lymphatic drainage of the mammary gland. The lungs, pleura and pleural recesses. The root of the lung. The heart. The pericardium and its sinuses. The mediastinum and its major parts

10th week:

Lecture: 1. Small and large intestines. 2. The pancreas. 2. The liver. The system of the portal vein.

Practice: Histology: Histology of the respiratory system. 1. Larynx (HE). 2. Trachea (HE). 3. Lung

(HE). **Demonstration:** Lung injected with indian ink (HE).

11th week:

Lecture: 1. The peritoneum. The retroperitoneum. 2. The kidney. The urinary system.

Practice: Histology: Histology of the alimentary system. 1. The stomach (HE). 2. Jejunum (HE). 3. Colon (HE). 4. Liver (pig, HE). 5. Pancreas (HE)

Demonstration: Vermiform appendix (HE).

12th week:

Lecture: 1. Male genital organs. 2. Female genital organs. Development of the urogenital system.

Practice: Histology: Histology of the kidney and genital organs. 1. Kidney, transverse section (HE) 2. Testis and epididymis (HE) 3. Ovary (HE) **Demonstration:** Corpus luteum (HE), Uterus, progesteron phase (HE)

13th week:

Lecture: CONSULTATION

Practice: Anatomy: The anatomy of the alimentary system and the urogenital apparatus.

The structure and layers of the abdominal wall. The stomach, the duodenum, the liver, the pancreas and the spleen. **Demonstration** of some parts of the small and large intestines. The peritoneum. The abdominal aorta and its branches. Lymphatic drainage of the abdominal cavity. The diaphragm. Location and capsules of the kidney. The kidney in a transverse section. Visceral relation of pelvic organs. **Demonstration** of male and female pelvic organs. **Demonstration** of external genital organs. Internal iliac artery. Sacral plexus.

14th week:

Lecture: -

Practice: Histology: 2nd MID-TERM TEST

Requirements

The educational activities of 'Pharmaceutical Anatomy' course include lectures and practices.

Attendance of the practices is compulsory. The presence will be recorded. If one collects 2 or more seminar and practice absences (regardless of the reason of the absences) the course organizer may refuse the end-semester signature.

Note, however, that the requirements of the course include material delivered in the lecture hall only, not necessarily available in the recommended textbooks, while in other cases some information in the suggested textbook is not regarded as part of the exam material.

The program of the lectures/practices are written in the University Calendar and the materials will be uploaded to the eLearning website of the Anatomy Department.

Rules of examinations:

Midterm examinations: During the term, two self-control tests (SCTs) are organized on the 8th and the 14th week. The written exams cover the topics of lectures/practices and official textbooks of the second semester. The SCTs are conducted with the help of Moodle system. Attendance of the SCTs is compulsory. If one meets the passing conditions (see below), the end- semester examination may be substituted with the result achieved on the basis of these tests.

Evaluation of the midterm examinations: The midterm exams will be evaluated with points and the points of the two examinations will be added. Students with scores higher than 60% earn an exemption from the end-semester examination with a mark that will be calculated on the basis of the overall performance on the two midterm examinations.

End-semester exam: The end-semester exam (ESE) is a written exam, that is conducted with the help of Moodle system, and covers the topics of lectures and practices of the semester.

The ESE mark based on the average score of mid-semester tests will be offered if

- one's average score of the mid-semester tests is above 60%; and
- none of the individual tests' results are less than 50%.
- the the signature of semester is NOT refused by the course coordinator.

The mark based on the result of ESE or based on the average score of mid-semester tests is calculated according to the following table:

score mark

0 – 59.9%:	fail
60 – 69.9%:	pass
70 – 79.9%:	satisfactory
80 – 89.9%:	good
90 – 100%:	excellent

-If one is not satisfied with this result, (s)he may participate in ESE during the examination period.

Registration for the exam and postponement: Through the NEPTUN system.

Reading materials

A. Birinyi: Anatomy, 2nd edition, University of Debrecen, 2008.

M. Petkó: Histology, University of Debrecen

K.L. Moore, and A.M.R. Agur: Essential Clinical Anatomy 2nd Edition, Lippincott Williams and Wilkins, 2002. ISBN: 0-78172830-4.

L.P. Gartner: Concise Histology. Saunders Elsevier, 2011. ISBN: 978-0-7020-3114-4.

T.W.Sadler: Langman's Medical Embryology. 10.th Edition, Lippincott Williams and Wilkins 2006. ISBN: 0-7817-9485-4.

Sobotta: Atlas of Human Anatomy I-II. 14th Edition Urban and Schwarzenberg, ISBN: 978-0-443- 10349-0.

Department of Behavioural Sciences

Subject: **BIOETHICS**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Introduction

2nd week:

Lecture: General Ethics Introduction – philosophical and conceptual overview

3rd week:

Lecture: Modern Medical Ethics – its evolution, character-traits and relation to its predecessors.

4th week:

Lecture: Patient Rights – their history, importance and challenges in the modern healthcare systems

5th week:

Lecture: End of Life Decisions – withholding and –drawing treatments, futility, triage

6th week:

Lecture: Fundamental Ethical Questions of Human Trials and Research Integrity

7th week:

Lecture: Casuistry as a Means of Analysis – 1st case analysis

8th week:

Lecture: Questions of Patient Rights and Justice – 2nd case analysis

9th week:

Lecture: End of Life Decision, Questions re. Comatose and Vegetative patients – 3rd case analysis

10th week:

Lecture: Challenges of Research Ethics – 4th case analysis

11th week:

Lecture: Ethical Questions of Reproduction – abortion, eugenics, and the sociopolitical aspects of bioethics

12th week:

Lecture: Ethical Questions of Pharmacy – Marketing, COI

13th week:

Lecture: Ethical Questions of Pharmacy – RCT-s, research integrity

14th week:

Lecture: Wrap-up

Requirements

Requirements:

Grade: Colloquium, offered grade can be given based on activity and presentation

Requirement of the signature: making a presentation

Compulsory readings:

Gregory E. Pence - Medical Ethics -Accounts of Ground-Breaking Cases McGraw-Hill Education, 2016

Guidry-Grimes, Laura, Veatch, Robert - The Basics of Bioethics – Routledge, 2019

About the course:

The course outlines and explores the basics of modern bioethics. It helps students orienting in the diverse questions of contemporary bioethics – ranging from its ethical foundations, theories and argumentation, through patient rights and the questions of autonomy, to the end of life decisions and research ethics issues.

On top of laying down the theoretical and conceptual grounds of the subject matter, the course aims to map the national and international legal frameworks and policy environment. Besides, the course's purpose is to train those competences which enables the students to interpret and critically reflect upon the actual laws through general and professional ethical norms, by means of developing their rhetorical, logical and philosophical skills.

Department of Foreign Languages

Subject: **HUNGARIAN CRASH COURSE**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **36**

1st week:

1st day: 1. lecke, 2. lecke I. rész (Greetings, the alphabet, numbers 0-20, colours, everyday expressions, nationalities)

2nd day: 2. lecke II. rész, 3. lecke (languages, numbers 21-29, names of places, the days of the week, numbers 30-100, the time, hány óra van? -

3rd day: 4. lecke, 5. lecke I. rész (Test Your Knowledge 1, adjectives and adverbs, verbs expressing activities 1)

4th day: 5. lecke II. rész, 6. lecke (times of day, hány órákor?, numbers 1000-1000000000, verbs expressing activities 2, everyday expressions, ordinal numbers)

5th day: 7. lecke, 8. lecke (Revision 1, everyday objects, food and drink, adverbs of frequency)

2nd week:

1st day: 9. lecke, 10. lecke I. rész (Food, drink, fruit, vegetables, the menu, ordering in a restaurant, shopping in the market, the uses of tessék, the weather)

2nd day: 10. lecke II. rész, 11. lecke (the seasons and months, clothes, Test Your Knowledge 2) -

3rd day: 12. lecke, 13. lecke I. rész (body parts, adjectives and descriptions, accessories, jobs, places)

4th day: 13. lecke II.rész, 14. lecke (personal details and filling in a form, family relations, revision 2)

5th day: End course written and oral exam

Requirements

9.00 - 10.30: language classes
 10.30 - 11:00 break
 11.00 - 12.30: language classes

Attending the language classes is compulsory. Being late for a class is considered as an absence. In case of missing more than 8 lessons, students have to retake the course for an extra fee.

Assessment: five grade evaluation. The final mark is based on the written and oral tests at the end of the course, class participation is also considered. The oral exam consists of a role-play from a list of situations covered in the coursebook. A further minimal requirement is the knowledge of 200 words. Students have to pass all the word quizzes in order to take the final tests.

STUDENTS WHO DO NOT ATTEND THE HUNGARIAN CRASH COURSE DUE TO THEIR OWN FAULT OR FAIL THE COURSE HAVE TO TAKE AN EXTRA COURSE FOR AN ADDITIONAL FEE DURING THE FIRST SEMESTER.

The final grade is given based on the following:

<60%	fail (1)
60-69%	pass (2)
70-79%	satisfactory (3)
80-89%	good (4)
90-100%	excellent (5)

Subject: **HUNGARIAN LANGUAGE I/1.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **24**

1st week:

Practical: 1. lecke: Itt az ideje gyakorolni, 2. lecke: Zoli

2nd week:

Practical: 3. lecke: UniBike és a Nagyerdő

3rd week:

Practical: 4. lecke: Debrecenbe utazik a családom

4th week:

Practical: 5. lecke: Panoráma a Nagytemplomból

5th week:

Practical: 6. lecke: Együtt a család Debrecenben (Összefoglalás)

6th week:

Practical: Revision, Mid-term test (written)
Self Control Test (Mid-term test (written))

7th week:

Practical: 7. lecke: Van kedved moziba menni?

8th week:

Practical: 8. lecke: Megyünk az egyetemre

9th week:

Practical: 9. lecke: Mit csinálsz a Malomparkban?

10th week:

Practical: 10. lecke: Kirándulunk a Hortobágyon,
11. lecke: Ez az utolsó óra?

11th week:

Practical: Revision, End-term test (written)
Self Control Test (end-term test (written))

12th week:

Practical: End-term test (oral)
Self Control Test (end-term oral test)

Requirements

Requirements of the course:

Attendance

Attending language classes is compulsory. If a student is late it is considered as an absence. Students can miss only 10 percent of the classes that is maximum 2 occasions. Making up with another class is not allowed. Medical notes are not accepted.

The teacher evaluates active participation in each class. Students are not allowed to share coursebooks during classes; therefore, if a student fails to bring the coursebook for the second time, attendance for that class is not granted.

Testing, evaluation

In the Hungarian Language I/1 course, students must sit for two written language tests, and an oral exam. If a student is late for the test, he/she is not allowed to take it.

The tests are scheduled:

- Mid-term written test: week 6
- End-term written test: week 11
- End-term oral test: week 12

During written and oral examinations (mid-term and end-term exams), students are not allowed to bring any devices suitable for communication or data storage (e.g. electronic devices) into the examination venue. If the supervisor detects the presence of such a device, the examination will be suspended and disciplinary proceedings will be initiated in writing to the Dean.

A further minimum requirement is passing 8 word quizzes during the semester. There are four word quizzes before and another four after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all the words before the mid-term and end-term tests. A word quiz can be postponed by a week and students can take it only with their own teacher. Missed word quizzes cannot be made up for on the day of the test.

The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they will fail the whole course. The results of the written tests and the oral exam are combined and averaged.

Based on the final score the grades are given as follows.

Final score	Grade
0 - 59 %	fail (1)
60-69 %	pass (2)
70-79 %	satisfactory (3)
80-89 %	good (4)
90-100 %	excellent (5)

If the average score of the written tests is below 60%, the student is allowed one remedial written exam covering the failed material. The remedial exam must be completed before the end of Week 12. Failure to attend the remedial exam results in a score of 0% for that test. The oral exam may

only be taken if the written tests have been passed.

Coursebook: Fodor, Marianna – Mezei, Zsuzsa Livia: Szívből magyarul

Subject: **LATIN LANGUAGE I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Class Introduction. Historical and mythological background of healing. The Latin alphabet. Reading practice

2nd week:

Practical: Anatomical planes and directions. How to learn a word in Latin? Dictionary form of nouns and adjectives. Grammatical gender

3rd week:

Practical: Pharmaceutical substances and drug forms. Grammatical concord

4th week:

Practical: Numbers from 1 to 10. Anatomy of the human body I: Body parts

5th week:

Practical: The five declensions and the genitive case. Herbs and plant parts

6th week:

Practical: Human skeleton, bones; Practicing the concord of genders

7th week:

Practical: Mid-term test

8th week:

Practical: Types of prescriptions. Parts of

prescriptions. Pharmaceutical abbreviations I.

9th week:

Practical: Anatomical terms of the cardiovascular system; Names of ingredients on prescriptions: forms and functions of the possessive/genitive case. Numbers to 100

10th week:

Practical: Formation of adjectives (regions of the human body, veins and arteries, pharmaceutical substances)

11th week:

Practical: Pharmacy preparations and containers

12th week:

Practical: Greek roots: the importance of clinical terminology. Pharmaceutical abbreviations. Revision

13th week:

Practical: End-term test

14th week:

Practical: Evaluation

Requirements

Requirements of the course:

Attendance

- Language class attendance is compulsory. The maximum percentage of allowable absences is 10 % of the classes. Students arriving more than ten minutes late for the classes are not allowed to

enter the class. Being late is counted as an absence. If the number of absences is more than two, the final signature is refused and the student must repeat the course.

- Students are required to bring the coursebook (in a printed or digital format in which the student can take notes) or other study material given out for the course with them to each language class. Active participation is evaluated by the teacher in every class. Attendance might be refused if a student's behaviour or conduct does not meet the requirements of active participation or he/she fails to bring the coursebook in a printed or digital format to the class.

Testing, evaluation

- 2 written language tests (week 7 and week 13) (40 - 40% of the final score). Students have to reach at least 50% of the points in each test, otherwise they have to retake it in week 14.
- 2 vocabulary quizzes on the vocabulary of chapters 1-5 and 6-10. (Week 6 and week 12) (5-5% of the final score) The vocabulary quiz awards 5% if the student achieves 80% of the possible score in the quiz.
- 2 online assignments before the mid-term and the end-term tests (5 - 5% of the final score). The minimum requirement of a successful assignment is achieving at least 80% of the possible score. The final score is the total sum of the mid-term test score + end-term test score + 2 vocabulary quiz scores + 2 online assignment scores.

Based on the final score, the grades are given according to the following table:

Final score	Grade
0 – 59	fail (1)
60-69	pass (2)
70-79	satisfactory (3)
80-89	good (4)
90-100	excellent (5)

- If the mid-term or the end-term test score does not reach 50% or the final score is below 60%, the student once can take a remedial test on the failed parts of the material in week 14.

Rules on the use of unauthorized tools/methods during tests/examinations

(cf. Rules and Regulations 20/A. §)

- If the instructor, person supervising the exam recognizes the use of any not allowed tools or methods during the test, the test has to be suspended and the student has to be given grade 1 (fail) or qualification not compliant. In the case of examinations, it is to be registered in the electronic academic system and on the exam-sheet as well. In the case of other types of tests, it is to be registered in writing.
- If the instructor recognizes any not-allowed methods or tools on the student or the use of these during the examination that constitute the serious violation of academic obligations (e.g. to carry deactivated electronic or telecommunication devices, use of electronic or telecommunications devices), the test has to be suspended.
- During the test or exam, the student is obliged to co-operate with the supervising persons and act in accordance with their instructions, especially in case of the suspicion of owning or using unauthorized methods or tools. In order to keep the straightness of the examinations the student has to immediately present the tools that may be used as subsidiary instruments (even on their bodies or on their clothes) on notification, and temporarily give it to the supervising person, according to minutes, until the end of the possible investigation. The student acknowledges that in case the suspicion of owning or using not-allowed methods or tools during the examination rises,

disciplinary proceedings may be initiated.

Coursebook, assignments, vocabulary lists and further details can be found on the elearning site of the Department of Foreign Languages (www.elearning.med.unideb.hu).

Department of Medical Genetics

Subject: **PHARMACEUTICAL BIOLOGY I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **21**

Practical: **28**

1st week:

Lecture: (1) Introduction into cell biology. The most important organic and inorganic compounds of the living cells I. (2) Introduction into cell biology. The most important organic and inorganic compounds of the living cells II.

Practical: 1. Introduction of the subject, methods of studying, compulsory and recommended literature. Getting acquainted, lab safety education. Microscopy I. Theoretical background, components of a microscope. Basics of electron microscopic techniques.

2nd week:

Lecture: (3) Introduction into cell biology. The most important organic and inorganic compounds of the living cells III. (4) Structural and functional characteristics of the bacterial cell. Biosynthesis of the bacterial cell wall and the antibiotics that inhibit this process.

Practical: 2. Microscopy II. The principles of phase contrast, dark field and polarization microscopy. Setting up the microscope. Practicing the use of light microscope.

3rd week:

Lecture: (5) The most important morphological and functional characteristics of eukaryotic cell. The animal cell. (6) The most important morphological and functional characteristics of plant and fungal cell. The biotechnological importance of fungi.

Practical: 3. Chemical structure of proteins, nucleic acids, and carbohydrates and their biological significance.

Self Control Test (Test on Microscopy in extra time)

4th week:

Lecture: (7) Molecular structure and function of biological membranes. The eukaryotic and prokaryotic cell boundary. (8) Transport across membranes.

Practical: 4. Isoelectric point of ovalbumin and optimum pH of the beta-galactosidase. Examination on the use of light microscope.

5th week:

Lecture: (9) The cytoskeleton. (10) Intracellular compartments and protein sorting I.

Practical: 5. Comparison of the prokaryotic and eukaryotic cell. Eukaryotic cell types, organelles, cell components. Cytoskeleton. Study of electron micrographs.

6th week:

Lecture: (11) Intracellular compartments and protein sorting II. (12) Extracellular matrix, cell junctions and cell adhesion molecules.

Practical: 6. Chemical structure of lipids and their biological significance. The structure of membranes. Transport across membranes. Study of electron micrographs.

Self Control Test (1st self-control test in extra

time)	Study of electron micrographs.
7th week: Lecture: (13) Energy, catalysis, and biosynthesis. Practical: 7. The GERL system. Endocytosis. Cell junctions and extracellular matrix. Study of electron micrographs.	Self Control Test (2nd self-control test in extra time)
8th week: Lecture: - Practical: 8. General principles of cytological staining. Ionic dyes. Staining of wool: a model experiment. Differential staining of the nucleus and cytoplasm. Examination on the use of light microscope.	11th week: Lecture: (18) Cell proliferation. Mitosis. (19) Meiosis. Gametogenesis. Practical: 11. Immunocytochemical reactions. Demonstration of immunoglobulin producing lymphocytes. Selective staining of mitochondria by enzyme-cytochemical reactions. Examination on the use of light microscope.
9th week: Lecture: (14) The mitochondrion and the biological oxidation. (15) The chloroplast and the photosynthesis. Practical: 9. Cytochemical reactions. Detection of DNA and polysaccharides. Examination on the use of light microscope.	12th week: Lecture: (20) Cell signaling I. (21) Cell signaling II. Practical: 12. Cell nucleus, chromatin and chromosomes. Study of electron micrographs.
10th week: Lecture: (16) The cell nucleus, chromatin and chromosomes I. (17) The cell nucleus, chromatin and chromosomes II. Practical: 10. Reaction catalysis. Photosynthesis, glycolysis, fermentation, terminal oxidation.	13th week: Lecture: No lecture scheduled. Practical: 13. Cell division.
	14th week: Lecture: No lecture scheduled. Practical: 14. Signaling.
	Self Control Test (3rd self-control test in extra time)

Requirements

Pharmaceutical Biology I. (first semester subject) is a prerequisite of Pharmaceutical Biology II. (second semester subject).

Conditions of signing the subject:

1. Attendance

Concerning attendance, the rules laid out in the EER of the University are clear.

The presence of students at laboratory practices ("practices") and classroom practices ("seminars") is obligatory and will be recorded. The professor refuses his/her signature for the semester's course-work in the case of over four weeks of absence, even if the student has an acceptable excuse (like a medical certificate).

If the student is absent from more than two practices or seminars (taken together), the semester will be accepted only if they pass an examination based on the material covered by the laboratory classes and seminars of the semester (lab test).

Successful accomplishment of the laboratory practices will be acknowledged by signing the laboratory notes made by the student during the practicals. If 3 or more practices will not be accepted, the course will not be signed and accepted. These students must take part in a written exam from the material of practices.

2. Microscopy exam

The students also have to show up their knowledge in handling and setting the light microscope on an oral exam during the practices and also have to write a knowledge test about microscopy (passing limit is 50%). Both oral and written microscopy test have to be successfully completed for the signature. Unsuccessful exams can be repeated two times during the semester.

Self-control tests

During the semesters 3 Self Control Tests will be offered. Participation in self-control tests is not mandatory. There will be no make-up or remedial tests. Based on the average % of the three SCTs bonus % will be given (as explained below) and a final grade will be offered according to the next table::

Percentage (%)	Mark
50.00 – 61.99	pass (2)
62.00 – 69.99	satisfactory (3)
70.00 – 79.99	good (4)
80.00 – 100	excellent (5)

If a student has no offered grade or do not accept it, bonuses are calculated according to the percentage average of the 3 tests (see the table below), and are added to the percentage result of the ESE.

Rules concerning repeaters:

Attendance of labs and seminars for those repeaters who have a signed lecture book from the previous year (i.e. they are repeaters because they either failed the Pharmaceutical Biology I. exam, or they have never taken the exam) is not required. Students should register for the subject electronically during the first week of the semester to participate in the three midterm Self Control Tests in order to qualify for test bonuses an offered grade and they take the regular exam at the end of the semester. Students, who did not get a signature in the previous year, are required (as all the other students) to register for the course and have to attend the labs and seminars and they are regarded as the students registering the course at the first time.

End of semester examination (ESE)

There will be a written examination at the end of the first semester which covers all the material of the semester taken in the lectures, seminars, and practices (for a detailed list see the University Bulletin). The examination questions include multiple choice, and short essay questions, figures, definitions, etc. The marks are based on the student's performance, expressed in percentage (%) as shown in the table below:

Percentage (%)	Grade
0 - 49.99	fail (1)

50.00 – 61.99	pass (2)
62.00 – 69.99	satisfactory (3)
70.00 – 79.99	good (4)
80.00 – 100	excellent (5)

The percentage values include the student's performance at the ESE as well as the bonus percentage they have obtained by taking the three mid-semester tests.

The following table shows the awarded bonus percentage based on the average result of the Self Control Tests. Absenteeism from the test will be scored as 0%. Bonuses are calculated only in the year of acquisition.

Average of the 3 tests (%)	Bonus %
40.00 – 43.99	1
44.00 – 47.99	2
48.00 – 51.99	3
52.00 – 55.99	4
56.00 – 59.99	5
60.00 – 63.99	6
64.00 – 67.99	7
68.00 – 71.99	8
72.00 – 75.99	9
76.00 – 79.99	10

ESE grade may be considered as part of the Final Exam mark upon the request of the student (see Pharmaceutical Biology II.).

The slides of the lectures and up-to-date information can be found at <https://elearning.med.unideb.hu>, username and password is your network-id (same as Neptun-id) and password. You will be able to check the content after the Neptun has registered you to the subject.

Departmental homepage: <https://humangenetics.unideb.hu>

Department of Inorganic and Analytical Chemistry

Subject: **GENERAL CHEMISTRY PRACTICE**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **42**

1st week:

Practical:

General introduction to the laboratory rules and laboratory work. Safety training. Introduction to laboratory pieces of equipment. Overview of pieces of the received laboratory equipment.

2nd week:

Practical:

Mass and volume measurements: weighing on analytical and standard laboratory balances; introduction to volume measurement devices

(pipette, burette, volumetric flask). Calibration of volumetric measuring equipment (pipette or volumetric flask). Calculation the standard error between the measured and nominal values.

3rd week:

Practical:

Introduction to solution preparation: grinding, use of mortar, pestle, volumetric flask.

Preparation of a standard solution from a crystalline salt. Introduction to a density measurement. The use of the pycnometer. Determination of the density of the prepared solution by the help of a volumetric flask. Calculating the weight percent composition of the prepared solution.

4th week:

Practical: Introduction to separation methods: decantation, centrifuging, filtration. Purification of solids. Theoretical background heating, cooling and the use of hot water bath. Purification of a benzoic acid sample contaminated with sodium chloride.

5th week:

Practical: The use of gas burners. Preparation of a double salt from simple salts and basic laboratory procedures. Determination of the composition of mixture of potassium chloride and potassium chlorate.

6th week:

Practical: Review of different methods used to temperature measurements. Introduction to the measurements of melting point of the solid substances. Determination of the melting point of the 71 CHAPTER 16 purified benzoic acid sample. Determination of the contamination percentage of the purified benzoic acid sample. Theoretical background of liquidliquid extractions and demonstration of the separation techniques. Dependence of reaction rate of concentration of reactants. Studying the factor affecting the reaction rates. Determination of the reaction rate and the rate law of the studied

reaction.

7th week:

Practical:

Demonstration of acid-base titration. Preparation of a standard solution of NaOH. Concentration determination of the standard NaOH solution by acid-base titration. Determination of the molar weight of the recrystallized sample of benzoic acid by acid-base titration. Comparing the result with the literature value and calculating the standard error between the given and measured data. Purified benzoic acid due in. The previously double salt due in.

8th week:

Practical: Laboratory work with gases: introduction to the use of gas cylinders, simple gas generator, Kipp's apparatus. Studying the chemical and physical properties of gases. Demonstration of hydrogen preparation. The hydrogen explosion test. Preparation of oxygen in a laboratory gas generator and burning of sulphur in oxygen. Study of the observations during the reaction (oxidation product of sulphur). Determination of molecular weight based on the ideal gas law.

9th week:

Practical: Quantitative study of a precipitation reaction to determine the stoichiometric composition of water insoluble precipitates using the method of continuous variation. Study of reactions involving gas formation and precipitation.

10th week:

Practical: Hydrolysis of salts to study the acid-base properties of ionic and covalent compounds in aqueous solutions or in reactions with water. Writing of the ionic equations based on the observed chemical reactions. General introduction to electrochemistry. Study of redox reactions. Prediction of the direction of spontaneous processes based on standard potentials. Factors affecting the order of the

deposition of different metals during electrolysis (study of Daniell cell). Return of the received pieces of laboratory equipment.

11th week:

Practical:

General test from the whole material of the

semester.

12th week:

Seminar: Calculation of pH of strong acids and strong bases.

Requirements

The objective of the laboratory work is to introduce first-year students of different background to laboratory work, the use of basic laboratory equipment, simple laboratory operations and measurements. In addition, students are expected to prepare certain simple chemicals and run various basic experiments to familiarize themselves with chemical laboratory work.

It is not allowed to miss any laboratory practices. If a student misses one lab practice, medical certification is needed and the experiments should be performed another day based on a prior consultation with the instructors. If a student misses two or more lab practices even for any medical reasons, the student's lecture book won't be signed and she or he has to retake the course next year.

The Lab Manual is available for the students at the beginning of the semester as an English translation of the Hungarian original.

The Weekly schedule lists the particular topics covered and gives a full description of the experiments. The word 'demonstration' in the syllabus refers to experiments that the instructors carry out for the students in person, while 'video demonstration' means that students are required to prepare for the lab individually based on the video demonstrations that are available in the e-learning system. These videos are recorded in Hungarian but subtitled in English language. In addition, youtube links as video demonstrations are also involved in the timetable.

Students should come to lab sessions fully prepared. Students should watch the videos and learn the core theoretical background of the experiments (reading the material once is insufficient) and solve the pre-lab exercises in the lab manual every week before the lab session. At the beginning of each laboratory practice the instructors check the "Pre-lab exercises" part in the students' lab manuals. If it is not completed, the student must leave the laboratory and it is taken as an absence. The sections 'Laboratory notes' and 'Review exercise and problems' should be completed during the laboratory session. After each session the instructors collect the lab manuals to overview the lab notes, make corrections if necessary and to decide if it is acceptable or not.

From the second session, the laboratory practice begins with a short test (about 20-25 minutes) based exclusively on the preparatory material of that week and the previous week and the results of the experiments carried out the previous week. Beside this, each short test contains questions relating to basic knowledge in chemistry the topics of which are indicated with yellow highlight in the weekly schedule. With each short test a student can collect 30 points (5 points for basic knowledge in chemistry and 25 points for the other topics of the certain week). Altogether there are nine short tests during the semester. Students are also required to write a general test which is based on the whole material of the course for weeks 1-10. The general test is worth 60 points.

It is not possible to miss short tests at the beginning of the laboratory practice. If a student misses more than two short tests, the laboratory practice will not be accepted for him or her. The students cannot miss the general test, otherwise no signature and final grade is given to the student.

Grading is based on a five-level scale: 1 (fail), 2 (pass), 3 (average), 4 (good), 5 (excellent). The final course grade is given based on the results of these tests, the quality of the laboratory notes and

the quality of laboratory work.

Criteria to obtain the final grade:

- attendance at all of the sessions (or in case of one missing session for medical reason, make up for the laboratory practice)
- filling the pre-lab exercises and proper documentation of the experiments carried out
- average score from the short tests must be above 50%
- average score from the basic knowledge in chemistry must be above 50%
- min. 40% result in the general test

Students with 'fail' final course grade due to inadequate laboratory work have to retake the course next year. Students with 'fail' final course grade due to low test results have a single opportunity to re-take a comprehensive test exam in the examination period.

'Signature denied' final course is given:

- absence of two laboratory practices or absence of one laboratory practice without making it up for
- lab manuals with "not acceptable" qualification
- average score from the basic knowledge in chemistry is lower 50%
- average score from the short tests is lower than 35%
- general test result is lower than 25%

Subject: **GENERAL CHEMISTRY THEORY**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **42**

Seminar: **28**

1st week:

Lecture: Classification of natural sciences, history and development of chemistry. The concept of chemical change. The SI system of units, the most important physical quantities and units. Conservation of mass and energy. The law of definite proportions, the law of multiple proportions, law of combining gas volumes, Avogadro's law. Dalton's atomic theory. Relative atomic and molecular weights. Amount of substance and the definition of mole. Notations for elements and compounds, symbol, empirical formula, molecular formula, structure, isomerism.

Seminar: Determination of atomic weight, molecular weight, empirical formula, molecular formula, amount of substance. Determination of empirical formula based on weight percent

composition and on elemental analysis.

2nd week:

Lecture: Valency and oxidation number. Oxidation number in inorganic compounds. Types of chemical reactions. Latin names of compounds. Experimental background of the atomic theory, discovery of the nucleus. Discovery and basic properties of subatomic particles (electron, proton, neutron). Isotopes. **Seminar:** General introduction to the units of concentration. Interconversion of units. Calculation problems connected to solution preparation. Introduction of the SI system. Mass concentration, molarity, mass percent composition, molar percent composition.

3rd week:

Lecture: Types and properties of radioactive radiation. Laws of radioactive decay, decay series. Medical and other practical importance of radioactive isotopes. The mass defect. Einstein's equation on mass-energy equivalence. Nuclear energy, nuclear fission and fusion. Quantized changes in the energy states of atoms. The photon hypothesis. The Bohr model of the atom. Characteristics of electromagnetic radiation, atomic line spectra, X-ray radiation.

Seminar: Review exercises concerning on the first two weeks. Interconversion of concentration units. Density measurements. Mixing equations.

4th week:

Lecture: The dual nature of matter. Heisenberg's uncertainty principle. Schrödinger's equation and its application for the hydrogen atom. Quantum numbers and their importance. The shape of atomic orbitals. Characterization of polyelectronic atoms. Principles of the periodic table.

Seminar: Theoretical background of crystallization. Exercises calculation problems of crystallization.

5th week:

Lecture: Electronegativity, ionization energy, electronaffinity, atomic and ionic radii and their change across the periodic table. The ionic bond. Calculation of the lattice energy. Metallic bonding.

Seminar: Theoretical backgrounds of gas and solids. Composition of solid and gas mixtures. Introduction to basic chemical equations. Stoichiometric calculations based on chemical equations. Preparation of salts, calculation of theoretical and percent yield. Dissolving of metal mixtures in acids.

6th week:

Lecture:

The covalent bond. Basic characteristics of the molecular orbital (MO) theory and its application for diatomic molecules. The valence shell electron pair repulsion (VSEPR) model. The

shape of molecules, bond angles, bond orders, hybridization. Polarity of covalent bonds, polar and nonpolar molecules.

Seminar: Acid-base equilibria. Theory of acid-base reactions and titrations. Exercises based on acid-base titrations. Stoichiometric calculations based on chemical equations. Determination of molar weight based on titration results.

7th week:

Lecture:

Intermolecular forces. London forces, dipole-dipole interaction. Hydrogen bond and its importance in inorganic and organic chemistry. General characterization of molecular, ionic, metallic, and network atomic solids.

Seminar: Review exercises in stoichiometry and concentration calculations.

8th week:

Lecture:

Classification and structure of chemical systems. General characterization of different states of matter. The kinetic molecular theory of gases, ideal and real gases. Gas laws: Boyle's law, Charles's law, the ideal gas law. Gas mixtures, partial pressure. General characterization of liquids, surface tension, viscosity. General characterization and classification of solids. Changes of state: melting, freezing, evaporation, condensation, sublimation.

Seminar: Introduction to basic gas laws.

Laboratory preparation of gases. Calculation problems connected to evolution of gases based on chemical equations.

9th week:

Lecture:

Classification of multicomponent systems, properties of solutions and mixtures. Solubility and units of concentration. Vapor pressure, freezing and boiling point of solutions. Osmosis pressure. Determination of molecular weight. Phase diagrams, critical temperature and pressure. Thermodynamic temperature.

Seminar: Theory of redox reactions. Balancing

of redox reactions. Calculations based on redox reactions. Preparation of salts from its metal.

10th week:

Lecture:

Basics of thermochemistry. Heat of reaction, Hess's law. The importance of heat of formation. Heat of reaction and bond energies. The direction of spontaneous chemical reactions: internal energy, enthalpy, free energy and entropy.

Seminar: Review exercises in balancing of redox and acid-base reactions.

11th week:

Lecture:

Dependence of reaction rates on concentrations and the temperature. Order of reactions. Activation energy. Catalysts, homogeneous and heterogeneous catalytic reactions. Enzymes. Photochemical processes. The equilibrium condition and the equilibrium constant. Possibilities to shift the composition of equilibria. Dependence of the equilibrium constant on temperature and pressure. Le Chatelier's principle.

Seminar: Definition of pH. Theoretical background of pH calculation. Introduction to water ionisation constants. Relationship between the K_w and H^+ .

12th week:

Lecture: Solubility equilibria, solubility product. Temperature dependence of solubility. Gas-liquid and liquid-liquid equilibria. Extraction. Different theories of acid-base reactions (Arrhenius,

Brønsted, Lewis). Characterization of aqueous solutions, electrolytic dissociation. Strength of acids and bases. Super acids. Dissociation constant and degree of dissociation.

Seminar: Calculation of pH of strong acids and strong bases.

13th week:

Lecture: Self-ionization of water. Ionic product of water. The definition and calculation of pH. Amphoteric substances. Buffer solutions and acid-base indicators. Acid-base properties of salts. Complex ion equilibria. Pearson's hard-soft theory.

Seminar: Calculation of pH of weak acids and weak bases. Determination of dissociation rate. Theoretical background of buffer systems, buffer capacity. Calculation problems regarding the pH of buffer systems.

14th week:

Lecture: Basics of electrochemistry. Galvanic cells and the concept of electrode potential. Standard electrode potentials, oxidizing and reducing agents. Water as a redox system. Electrolysis, voltage needed in electrolytic cells, overvoltage. Quantitative laws of electrolysis. Galvanic cells and batteries.

Seminar: Electrochemical exercises. Fundamental of galvanic cells (Daniell cell). The concept of electromotive force, redox potential, standard redox potential. Nernst equation. Review exercises of pH calculations.

Requirements

Minimum requirements of the seminar:

1. The presence of students at seminars is obligatory. If a student misses three seminars even for any medical reasons, the student's lecture book won't be signed.
2. During the semester, the students are required to write two tests. The sum of scores from both tests must be at least 50% to get the signature and these students are eligible to register for the theoretical exam. The students with low test results (the score of both tests are between 20 and 40%) can take a comprehensive test (Test III) in the examination period and the passing level is 60%. Test III will be organized only once in the examination period. If the score of the individual tests is less than 20%, the student's lecture book won't be signed and the student has to retake the

course next year.

Department of Pharmaceutical Technology

Subject: **GENERAL COMMUNICATION**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **14**

1st week:

Practical: The basics of communication I.

2nd week:

Practical: The basics of communication II.

3rd week:

Practical: Verbal communication I.

4th week:

Practical: Verbal communication II.

5th week:

Practical: Non-verbal communication I.

6th week:

Practical: Non-verbal communication II.

7th week:

Practical: Metacommunication I.

8th week:

Practical: Metacommunication II.

9th week:

Practical: Congruent and incongruent communication I.

10th week:

Practical: Congruent and incongruent communication I.

11th week:

Practical: Vegetative communication I.

12th week:

Practical: Vegetative communication II.

13th week:

Practical: Situations I.

14th week:

Practical: Situations II.

Requirements

Attendance in the lectures is required.

Subject: **PHARMACY PROPEDEUTICS**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: The methods of Greek, Roman and Arab treatments.

2nd week:

Lecture: Pharmaceutics in ancient times and in middle ages.

3rd week:

Lecture: The development of anatomical and morphological thinking.

4th week:

Lecture: The development of bacteriological thinking.

5th week:

Lecture: The development of physiological thinking.

6th week:

Lecture: The history of the development of medical departments.

7th week:

Lecture: Factors that helped in the development of theoretical and practical pharmacy in Hungary.

8th week:

Lecture: The development of pharmacies.

9th week:

Lecture: The pharmaceutical career as a profession.

10th week:

Lecture: The structural build-up of the Hungarian public health.

11th week:

Lecture: Drug as remedy.

12th week:

Lecture: Grouping of drugs. (origin, therapeutic effect, the area of utilization, the method of administration)

13th week:

Lecture: Drug supply. The functional conditions of pharmacies (personal, material).

14th week:

Lecture: The professional books, journals in a pharmacy. (Pharmacopoeia, Hungarian/foreign). Formulae Normales (pharmaceutical and medical edition). Prescriptions.

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn't attend 30% of lectures.

Division of Biomathematics

Subject: **MATHEMATICS**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **14**

Practical: **28**

1st week:

Lecture: Introduction to mathematics: sets and classification of numbers. Order of operations, rounding numbers, scientific notation, direct and

inverse proportionality, units and their conversions, prefixes.

Practical: Introduction to mathematics: sets and classification of numbers. Order of operations,

rounding numbers, scientific notation, direct and inverse proportionality, units and their conversions, prefixes.

2nd week:

Lecture: Linear and quadratic equations, systems of equations. Logarithms and exponentials.

Practical: Linear and quadratic equations, systems of equations. Logarithms and exponentials.

3rd week:

Lecture: Vectors, coordinate geometry and functions (basic types, transformations, inverse functions). Slope and equations of a line.

Fundamentals of trigonometry. Area and volume of geometrical figures.

The concept of limit, some limit theorems, continuity, some theorems on continuous functions.

Practical: Vectors, coordinate geometry and functions (basic types, transformations, inverse functions). Slope and equations of a line. Fundamentals of trigonometry. Area and volume of geometrical figures.

The concept of limit, some limit theorems, continuity, some theorems on continuous functions.

4th week:

Lecture: Infinite series, compound interest, limit of sequences.

Practical: Infinite series, compound interest, limit of sequences.

5th week:

Lecture: Some definitions of derivatives, limit of sequences.

Practical: Some definitions of derivatives, limit of sequences.

6th week:

Lecture: The Chain rule, derivatives of trigonometric functions, Implicit differentiation and higher derivatives.

Practical: The Chain rule, derivatives of trigonometric functions, Implicit differentiation

and higher derivatives.

7th week:

Lecture: Differentials and Newton-Raphson approximations, L'Hopital's rule, application of derivatives.

Practical: Differentials and Newton-Raphson approximations, L'Hopital's rule, application of derivatives.

8th week:

Lecture: Integration, an area problem, definition of definite integral, some theorems on integral calculus, fundamental theorem of calculus.

Practical: Integration, an area problem, definition of definite integral, some theorems on integral calculus, fundamental theorem of calculus.

9th week:

Lecture: Area between graphs, more applications of integral calculus.

Practical: Area between graphs, more applications of integral calculus.

10th week:

Lecture: Formal integration, indefinite integrals, integration by parts, trigonometric integrals.

Practical: Formal integration, indefinite integrals, integration by parts, trigonometric integrals.

11th week:

Lecture: Integration by trigonometric substitution, partial fraction.

Practical: Integration by trigonometric substitution, partial fraction.

12th week:

Lecture: Numerical integration, trapezoidal rule, Simpson's rule.

Practical: Numerical integration, trapezoidal rule, Simpson's rule.

13th week:

Lecture: Differential equations.

Practical: Differential equations.

enzyme kinetics.

14th week:

Lecture: Application of differential equations in biochemistry, Michaelis-Menten equation of

Practical: Application of differential equations in biochemistry, Michaelis-Menten equation of enzyme kinetics.

Reading materials:

Fong Yuen, Wang Yuan: Calculus.

Springer, Singapore, 2000.

Requirements

1. Lectures: Attendance to lectures is emphatically recommended. All material covered in the lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Some concepts and ideas are discussed in the lectures only and are not in the textbook. A student may collect 10 bonus points at the seminars if she/he adequately answers the questions in the 5-minute tests at the beginning of the seminars. These bonus points are added to the result of the final exam and/or the course test according to point 5.
2. Seminars: Attendance to seminars is compulsory, however a student may miss maximum 4 (four) seminars. The teacher will discuss the material of the lectures in more detail on seminars. In the seminars, students are encouraged to ask questions related to the topic of the lectures discussed.
3. Exemptions: Applications for exemption from the mathematics course has to be turned in to the Credit Transfer Committee. Such requests are not accepted by the Biomathematics Division or the Department of Biophysics and Cell Biology. The deadline for such applications is Friday on the third week. No application will be considered after this date.
4. Requirements for signing the lecture book: Maximum 4 absences are allowed from the seminars. If the number of absences from the seminars is more than four, we will not sign the lecture book.
5. Self-control tests (STC) and final exam (FE): Students will have two STCs during the semester. One on week 7 and the other one on week 13 whose structure will be identical to those of the final exam. None of the SCTs are obligatory. Each SCT will be graded (0-100 %, 0% for absence) and the results of the two SCTs will be averaged (Xave). The missed test will be counted as 0% in the average. Missed SCTs cannot be made up at a later time. Based on the SCTs students may obtain the following grades:

X ave percentage	Mark
0-59.99	FAIL(1)
60-69.99	PASS(2)
70-79.99	SATISFACTORY(3)
80-89.99	GOOD(4)
90-100	EXCELLENT(5)

Students who could not meet the above described conditions for exemption during the two semesters must sit for the FE from the whole material of the semester. Students have three chances

(A, B, C) for passing the mathematics FE in the winter exam period after the semester in which the course was taken. On the FE students may obtain the following grades:

Percentage	Mark
49.99	FAIL(1)
50-64.99	PASS(2)
65-74.99	SATISFACTORY(3)
75-84.99	GOOD(4)
85-100	EXCELLENT(5)

6. Compulsory reading:

Belágyi, Mátyus, Nyitrai: Mathematics, ISBN: 978-963-343-8

Yuen & Yuan: Calculus, Springer-Verlag Singapore Pte. Ltd. 2000, ISBN: 981-3083-8, 981-3083-2

7. Rules for calculator usage during course tests and the final examination

In order to ensure a fair evaluation, to avoid disturbances in the testing room, and to protect the security of the test material the following types of calculators are NOT permitted:

- Calculators with built-in computer algebra systems (capable of simplifying algebraic expressions)
- Pocket organizers, handheld or laptop computers
- Any device capable of storing text. Calculators with a typewriter keypad (so-called QWERTY devices), electronic writing pads and pen-input devices are not allowed either. Calculators with letters on the keys (e.g. for entering hexadecimal numbers or variable names) are permitted as long as the keys are not arranged in QWERTY format
- Calculators or other devices capable of communicating with other devices
- Calculators built into wireless phones
- Calculators with paper tape or models that make noise

In general, students may use any four-function, scientific or graphing calculator except as specified above. Sharing calculators during tests is not allowed, and the test proctor will not provide a calculator.

Subject: **PHYSICS**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: Lecture:1-2. Kinematics and dynamics of a point of mass. Basic kinematics concepts: coordinate system, reference frame, position vector, trajectory, path, displacement, velocity vector, acceleration vector. Mean, change, rate of change, average rate of change of a time-dependent quantity. Graphical introduction and illustration of time differentiation and integration: tangent to direction, area under curve. Free falls

and deflections. Basics of the dynamics of a point of mass. Axioms of mechanics. Inertia system. Types of forces. Equation of motion. Mass and weight.

2nd week:

Lecture: Lecture:3-4. Energy and momentum conservation. Work, energy, performance. Kinetic energy and work rate. Conservative force field and potential energy. Conservation of mechanical

energy theorem. Momentum and conservation of momentum in collisions.

3rd week:

Lecture: Lecture:5-6. Circular motion, harmonic oscillation, wave motion. Circular motion, uniform circular motion. Harmonic oscillatory motion as a projection of circular motion, damped oscillation, forced oscillation, resonance. Waves. Frequency, amplitude, wavelength. Interference.

4th week:

Lecture: Lecture:7-8. Fluid mechanics. Statics of fluids, location dependence of pressure in gravity: hydrostatic pressure, buoyancy, Archimedes' law, buoyancy. Pascal's law. Fluid flow. Types of flow, basic laws of steady flow: continuity equation, Bernoulli's equation and applications. Surface tension, capillarity.

5th week:

Lecture: Lecture:9-10. Fundamentals of thermodynamics. Empirical temperature. Zero Theorem. Measurement of temperature. Thermal

expansion. Work and heat. Volumetric work. Internal energy. First law of thermodynamics. Heat capacity, specific heat. Equations of state of an ideal gas. Reversible and irreversible processes. Second law of thermodynamics. Entropy. Probabilistic interpretation of diffusion, Brownian motion, Fick's laws.

6th week:

Lecture: Lecture:11-12. Electric charge, Coulomb's law, electric field characteristics. Electric potential, voltage. Direct current. Ohm's law. Kirchhoff's laws. Work of direct current. Electric work, power.

7th week:

Lecture: Lecture:13-14. Magnetism. Magnetic field properties. Flux. Magnetic induction: rest, motion. Lorentz force. Induction of alternating current, its properties, alternating current resistors. Work, power of alternating current.

Requirements

Required textbooks:

The materials (lectures, practical descriptions) on the e-Learning page of the course.

Recommended readings:

Serway-Vuille College Physics 11th edition

Teaching website: biophys.med.unideb.hu

Physics subject requirements:

1. Lectures:

Attendance of lectures is not compulsory, but recommended.

Students will write a grade offering exam during the semester in the 8th educational week. The test will be test-type (true-false, relational analysis, completion of statements, etc.) and will consist of short expository (sometimes arithmetic) questions. The exact date of the tests will be published on the Institute's website during the first week of the semester. It is not compulsory to take the test.

Based on midterm test performance, students may earn an offered grade as follows:

below 50%: no grade offered

50-59%:	satisfactory (2)
60-69%:	moderate (3)
70-79%:	good (4)
80%:	excellent (5)

In the case of an unsuccessful or non-written grade-offering test, the course will end with a written examination for students who have registered for the course in NEPTUN and registered for the examination.

The result of the examination is calculated as follows:

Below 50%:	unsatisfactory (1)
50-59%:	pass (2)
60-69%:	average (3)
70-79%:	good (4)
80%:	excellent (5)

2. Exemptions:

Requests for waivers from the entire physics course must be submitted to the Educational Office. The Department of Biophysics and Cell Biology does not accept such requests. The request for exemption must include: 1. a brief statement of the reasons why the student is requesting exemption; 2. a certificate of the courses taken as the basis for the request; 3. a reliable description of the curriculum of the courses taken (if not taken at the University of Debrecen). Applicants will be informed in writing of the decision.

3. Exams:

The student has three examination chances (A, B, C) for the Physics Colloquium in the examination period following the course.

Educational manager: Dr. Enikő Nizsalóczki, e-mail: biophysedu@med.unideb.hu

Division of Pharmacognosy

Subject: **BOTANY PRACTICE**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Structure of plant cells, Diagnostic plant cell constituents, Inclusions, Vacuoles, Staining plant cells (Neutral Red, Lugol Solution etc.), Plasmolysis of plant cells, Preparation of your own microscopic samples.

2nd week:

Practical: Epidermis studies, Stomata, Primary and secondary epidermis, Digitalis purpureae folium, Salviae folium, Absinthii folium, Altheae folium, Thymi folium, Types of ti-chomes in Lamiaceae. Frangulae cortex, Analysis of Periderms and lenticels. Studying of Parenchymas and Collenchymas, Salep tuber,

Calami Rhysoma, Marrubi herba, Capsici fructus, Cydonae fructus, Foeniculi fructus, Auranti pericarpium, pericarpium, i fructus, Coriandri fructus, Juniperus galbulus, Fruits of Apiaceae.

3rd week:

Practical: Studies on vascular tissues, Xylem - Tracheas, Tracheides, Xylemparenchymas, Fiber cells, Types of thickening, Phloem - Sieve cells, Sieve tubes, Sieve plates, Companion cells, Albuminous cells, Types of Vascular Bundles, Veratri radix, Agrimo-niae herba, Calami rhizoma, Belladonae folium, Filicis maris rhizoma.

4th week:

Practical: Tissues of Primary and Secondary Roots, Veratri radix, Valerianae radix, Primulae radix, Liquiritiae radix, Saponariae albae readix, Belladonae radix, Gentianae radix, Altheae radix.

5th week:

Practical: Tissues of Secondary roots, Ipecacuanhae radix, Ononidis radix, Ratanhia radix, Tissues of rhizomes, Graminis rhizoma, Veratri rhizoma, Rhei rhizoma.

6th week:

Practical: Tissues of Stems (Monocotyledonopsida, Dicotyledonopsida), Characterization of Cortex, Agrimoniae herba, Stem of Equisetum arvense, Chinae cortex, Frangula cortex, Cinnamoni cassiae Cinnamon ceylonici cortex, Quercus cortex.

7th week:

Practical: Tissues of leaves, Sennae folium, Absinthii folium, Uvae ursi folium, Belladonae folium, Stramonii folium, Hyoscyami folium, Calciumoxalate inclusions.

8th week:

Practical: Fruit studies, Foeniculi fructus, Carvi fructus, Anisi vulgaris fryctus, ConiAuranti

9th week:

Practical: Seed studies, Tisseus of seeds, Lini semen, Strophanti semen, Sinapis nigrae semen, Strychni semen, Myrysticae semen, Stereomicroscopic studies on seeds, Identifying characters of drugs.

10th week:

Practical: Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Dicotyledonopsida, Ranunculaceae, Helleboraceae, Papaveraceae, Fumariaceae.

11th week:

Practical: Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Rosaceae, Fabaceae, Apiaceae, Brassicaceae.

12th week:

Practical: Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Apocynaceae, Rubiaceae, Boraginaceae,

13th week:

Practical: Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Lamiaceae, Solanaceae, Scrophulariaceae, Asteraceae.

14th week:

Practical: Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Monocotyledonopsida, Liliaceae, Poaceae.

Requirements

Detailed information is given in the first practical course and via the e-learning system.

Completion of the practice requires:

-completion of the practical tests (in person, or on e-learning platform, depending on the situation)

Subject: **BOTANY THEORY**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: History of pharmaceutical botany and pharmaceutical plant science. Anatomy, structure, function and metabolism of plant cells. Basic plant cell types, function of plant organelles.

2nd week:

Lecture: Anatomy of plant tissues, Meristems, Parenchymas, Collenchymas, Sclerenchymas, Epidermis (types of stomata), Vascular tissues, Ground tissues, Secretory tissues.

3rd week:

Lecture: Primary and Secondary plant body, Tissues of the Root and Stem, Xylem and Phloem, Function of Vascular Cambium. Organs Organizations of Root and Stem systems.

4th week:

Lecture: Primary and Secondary plant body, Tissues of Leaves and Reproductive Organs (anatomy of flowers), Organization of Leaves and Reproductive Organs, Plant Life Cycle, Gametophyte and Sporophyte, Sexual Reproduction of Plants, Double Fertilization and Pollination of Plants.

5th week:

Lecture: Inflorescens. Fruit Types (true and accessory fruits) and Seed Dispersal. Plant Embryo and Seed Anatomy, Development of Seeds, Types of Seedlings.

6th week:

Lecture: Classification and Systematic of Plants, Historical Aspects of Plant Classification, Artificial- versus Natural System of

Classification, Levels of Taxonomic Categories, Phenetic, Numeric- and Applied Taxonomy.

7th week:

Lecture: Kingdoms of Living Creatures, Cyanobacteria, Algae and Origin of Eukaryotes, Endosymbiont Theory, Embryophyta, Cormophyta and Spermatophyta Plants, (Mosses, Liverworts and Hornworts, Lichenophyta, Pteridophyta, Gymnospermatophyta, Angiospermatophyta).

8th week:

Lecture: Characterization of spermatophytes. Orders, families and important taxa of gymnosperms.

9th week:

Lecture: Taxonomy of Angiosperms. Orders, families and important taxa of Magnoliidae.

10th week:

Lecture: Dicotyledonopsida: Orders, families and important taxa of Hamamelididae and Dilleniidae.

11th week:

Lecture: Dicotyledonopsida: Orders, families and important taxa of Rosidae.

12th week:

Lecture: Dicotyledonopsida, Orders, families and important taxa of Asteridae.

13th week:

Lecture: Monocotyledonopsida: Orders, families and important taxa of Liliidae.

14th week:

Lecture: Monocotyledonopsida: Orders, families

and important taxa of Commelinidae and Arecidae.

Requirements

Detailed information is given in the first lecture and via the e-learning system.

Completion of the lecture requires:

-examination during the exam period based on the uploaded lectures (in person, or, on video platform face-to-face, depending on the situation).

Department of Anatomy, Histology and Embryology

Subject: **PHARMACEUTICAL ANATOMY II.**

Year, semester: 1st year – 2nd semester

Number of teaching hours

Lecture: 23

Practice: 18

1st week:

Lecture: 1. Anatomy of the head and neck. Nasal cavity 2..Oral cavity. The pharynx and the larynx.

Practice: Anatomy: -

2nd week:

Lecture: 1. Introduction. Development of the nervous system. Parts of the nervous system. 2. Meninges. Circulation of the brain. Blood-brain barrier.

Practice: Anatomy: The skull. Subdivisions of the skull. Calvaria and base of the skull. Sutures and fontanelles. The bony orbit, nasal cavity and paranasal sinuses. Temporomandibular, atlantooccipital and atlantoaxial joints.

3rd week:

Lecture: 1. Histology of the nervous system. 2. Morphological basis of the neurotransmission. The chemical synapses.

Practice: Anatomy: Anatomy of the head and neck. Overview of the anatomy of the head and neck. Sensory and motor innervation of the face. Muscles of facial expression. The parotid gland. Common carotid artery and its branches. Internal and external jugular veins. Cervical plexus. Define the location of the hyoid bone, thyroid gland and thyroid cartilage. Site of conicotomy. Surface projection of the apex of the lung. The

larynx and the pharynx.

4th week:

Lecture: 1. Axonal transport. Degeneration and regeneration in the nervous system. 2. Structure of the telencephalon and diencephalon.

Practice: Histology: Neural tissue. histology of the spinal cord. 1. Peripheral nerve (HE) 2. Spinal ganglion (HE) 3. Spinal cord (HE) 4. Spinal cord (Bielschowsky impregnation)

5th week:

Lecture: 1. Structure of the brainstem and cerebellum. 2. Stucture of the spinal cord.

Practice: Anatomy: Gross anatomy of the spinal cord and the brain.

6th week:

Lecture: 1 Somatomotor function of the spinal cord. 2. The somatomotor system.

Practice: Histology: Histology of the cerebral and cerebellar cortex. 1 Cerebellum (HE) 2 Cerebellum (Golgi impregnation) 3 Cerebrum (Golgi impregnation)

7th week:

Lecture: CONSULTATION

Practice: -

8th week:

Lecture: -

Practice: *Histology*: 1st practice test (optional)

9th week:

Lecture: 1. General principles of somato-viscerosensory system. The skin. 2. Anatomy of the eye.

Practice: *Histology*: Functional microscopic anatomy of the skin 1 Fingertip skin (HE) 2 Scalp (HE)

10th week:

Lecture: 1. Anatomy of taste and smell sensation. 2. Anatomy of the auditory and vestibular system.

Practice: *Anatomy*: Anatomy of sensory organs.

11th week:

Lecture: 1. Structure of the autonomic nervous system. 2. Structure of monoaminergic and limbic systems.

Practice: *Histology*: Microscopic anatomy of the eyeball and the inner ear. 1 Eye (HE) 2. Inner ear (HE)

12th week:

Lecture: 1. Neuroendocrine regulation. The hypothalamo- hypophyseal system. 2. The pineal, thyroid, parathyroid and suprarenal glands.

Practice: *Histology*: The histology of endocrine system. 1. Pituitary gland (HE). 2. Thyroid gland (HE). 3. Parathyroid gland (HE). 4. Suprarenal gland (HE).

13th week:

Lecture: CONSULTATION

Practice: -

14th week:

Lecture: -

Practice: *Histology*: 2nd practice test (optional)

Requirements

The educational activities of the Pharmaceutical anatomy II course include lectures and practices. In the detailed program of the course (which, in fact, corresponds to the list of requirements) as well as here, both the compulsory and suggested textbooks are listed. Note, however, that the requirements of the course include material delivered in the lecture hall only, not necessarily available in the recommended textbooks, while in other cases some information in the suggested textbook is not regarded as part of the exam material.

Attendance of the seminars and practices is compulsory, although one may have two practice absences. If one collects three or more practice absences (regardless of the reason of the absences) the course organizer may refuse the end-semester signature.

End semester exam: The end-of-semester comprehensive exam is conducted in the form of a written test. The exam covers the material from both semesters (Pharmaceutical Anatomy I and II), including all lectures, seminars, and practical sessions.

The assessment is carried out in the form of multiple-choice questions through the Moodle system. The results of the written exam will be converted into a final grade based on the following scale:

Score mark

0 – 59.9 %: fail

60 – 69.9 % pass

70 – 79.9 % satisfactory

80 – 89.9 % good

90 – 100 % excellent

RETAKING A SUCCESSFUL EXAMINATION is possible. The grade for a revision examination is final unless the result is 'fail', in which case it may be revised in accordance with the rules applicable to failed examinations.

Department of Foreign Languages

Subject: **HUNGARIAN LANGUAGE I/2.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Orientáció, 1. Emlékszel?

2nd week:

Practical: 2. Napirend

3rd week:

Practical: 3. Melyik a jobb?

4th week:

Practical: 4. A testem

5th week:

Practical: 5. Beteg vagyok

6th week:

Practical: 6. Ismétlés a tudás anyja

7th week:

Practical: Revision, Mid-term test (written)

Self Control Test (written test)

8th week:

Practical: 7. A család

9th week:

Practical: 8. Zumbázni szeretnék!

10th week:

Practical: 9. Mit csináltál tegnap?

11th week:

Practical: 10. Hol nyaraltatok?

12th week:

Practical: 11. Vizsga lesz!

13th week:

Practical: Revision, End-term test (written)

Self Control Test (written test)

14th week:

Practical: End-term test (oral)

Self Control Test (oral test)

Requirements

Requirements

Attendance

Attendance at language classes is compulsory. If a student is late, it is considered an absence. Students may miss no more than 10% of classes, which means a maximum of two occasions. Making up missed classes by attending another group is not allowed. Medical notes are not

accepted.

The teacher evaluates active participation in each class. Students are not allowed to share coursebooks during classes; therefore, if a student fails to bring the coursebook for the second time, attendance for that class is not granted.

Testing and Evaluation

During the course, students must take two written language tests and one oral exam. If a student is late for a test, they are not allowed to take it. If a student misses the mid-term test with approval from the Head of the Department, they may take it in Week 13.

Schedule for the tests:

- Week 7: mid-term written test
- Week 13: end-term written test
- Week 14: end-term oral test

During written and oral examinations (mid-term and end-term exams), students are not allowed to bring any devices suitable for communication or data storage (e.g. electronic devices) into the examination venue. If the supervisor detects the presence of such a device, the examination will be suspended and disciplinary proceedings will be initiated in writing to the Dean.

A further minimum requirement is knowledge of approximately 200 words per semester, assessed through 10 vocabulary quizzes. Five quizzes are held before and five after the mid-term test. If a student fails or misses any vocabulary quiz, they are not allowed to start the written test and must take a vocabulary exam covering all 100 words from the relevant period (before the mid-term or end-term test).

Missed word quizzes cannot be made up for on the day of the test.

A vocabulary quiz may be postponed by one week only and must be taken with the student's own teacher. Students may earn bonus points (5% + 5%) by completing two extra quizzes, each consisting of 20 sentences, before the mid-term and end-term tests. The sentences are taken from the units of the course book.

The oral exam consists of a role-play based on a list of situations covered in the course book. If a student fails the oral exam, they fail the entire course. The results of the written tests and the oral exam are combined and averaged.

Grading

Grades are awarded based on the final score as follows:

Final score	Grade
0–59%	Fail (1)
60–69%	Pass (2)
70–79%	Satisfactory (3)
80–89%	Good (4)
90–100%	Excellent (5)

If the average score of the written tests is below 60%, the student is allowed one remedial written exam covering the failed material. The remedial exam must be completed before the end of Week 14. Failure to attend the remedial exam results in a score of 0% for that test. The oral exam may only be taken if the written tests have been passed.

Coursebook: Györffy, Erzsébet–Mezei, Zsuzsa Livia: Magyarules

Subject: **LATIN LANGUAGE II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Class introduction, revision

2nd week:

Practical: Effect denoting expressions. Dosage forms

3rd week:

Practical: Gastrointestinal system and related disorders

4th week:

Practical: Numbers to 2000, numbers with multiple forms.

5th week:

Practical: Route of drug administration. Medications of the digestive system.

6th week:

Practical: Accusative case. Prepositions taking the accusative. The 4th declension.

7th week:

Practical: Mid-term test

Self Control Test

8th week:

Practical: Respiratory system. Respiratory conditions and medications.

9th week:

Practical: Prepositions taking the ablative case. The 5th declension.

10th week:

Practical: Skin. Anatomy, related problems, action and use expressions, prescriptions

11th week:

Practical: Prescribing powders and suppositories.

12th week:

Practical: Revision of prescription writing, genitive form and numbers

13th week:

Practical: End-term test

Self Control Test

14th week:

Practical: Evaluation

Requirements

Requirements of the course:

Attendance

- Language class attendance is compulsory. The maximum percentage of allowable absences is 10% of the classes. Students arriving more than ten minutes late for the classes are not allowed to enter the class. Being late is counted as an absence. If the number of absences is more than two, the final signature is refused and the student must repeat the course.
- Students are required to bring the coursebook (in a printed or digital format in which the student can take notes) or other study material given out for the course with them to each language class. Active participation is evaluated by the teacher in every class. Attendance might be refused if a student's behaviour or conduct does not meet the requirements of active participation or he/she

fails to bring the coursebook in a printed or digital format to the class.

Testing, evaluation

- 2 written language tests (week 7 and week 13) (40-40% of the final score). Students have to reach at least 50% of the points in each test, otherwise they have to retake it in week 14.
- 2 vocabulary quizzes on the vocabulary of chapters 1-5 and 6-10. (Week 6 and week 12) (5-5% of the final score) The vocabulary quiz awards 5% if the student achieves 80% of the possible score in the quiz.

• 2 online assignments before the mid-term and the end-term tests (5-5% of the final score). The minimum requirement of a successful assignment is achieving at least 80% of the possible score.

The final score is the total sum of the mid-term test score + end-term test score + 2 vocabulary quiz scores + 2 online assignment scores.

Based on the final score, the grades are given according to the following table:

Final score	Grade
0-59	fail (1)
60-69	pass (2)
70-79	satisfactory (3)
80-89	good (4)
90-100	excellent (5)

- If the mid-term or the end-term test score does not reach 50% or the final score is below 60%, the student once can take a remedial test on the failed parts of the material in week 14.

Rules on the use of unauthorized tools/methods during tests/examinations

(cf. Rules and Regulations 20/A. §)

- If the instructor, person supervising the exam recognizes the use of any not allowed tools or methods during the test, the test has to be suspended and the student has to be given grade 1 (fail) or qualification not compliant. In the case of examinations, it is to be registered in the electronic academic system and on the exam-sheet as well. In the case of other types of tests, it is to be registered in writing.
- If the instructor recognizes any not-allowed methods or tools on the student or the use of these during the examination that constitute the serious violation of academic obligations (e.g. to carry deactivated electronic or telecommunication devices, use of electronic or telecommunications devices), the test has to be suspended.

- During the test or exam, the student is obliged to co-operate with the supervising persons and act in accordance with their instructions, especially in case of the suspicion of owning or using unauthorized methods or tools. In order to keep the straightness of the examinations the student has to immediately present the tools that may be used as subsidiary instruments (even on their bodies or on their clothes) on notification, and temporarily give it to the supervising person, according to minutes, until the end of the possible investigation. The student acknowledges that in case the suspicion of owning or using not-allowed methods or tools during the examination rises, disciplinary proceedings may be initiated.

Coursebook, assignments, vocabulary lists and further details can be found on the elearning site of the Department of Foreign Languages (www.elearning.med.unideb.hu).

Department of Medical Genetics

Subject: **PHARMACEUTICAL BIOLOGY II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: **35**

Practical: **28**

1st week:

Lecture: (1) Basic principles of nucleic acid structure and gene expression I. (2) Basic principles of nucleic acid structure and gene expression II. (3) Chromosomal abnormalities and structural variants I.

Practical: Seminar: Introduction to genetics. DNA replication, transcription, translation.

2nd week:

Lecture: (4) Chromosomal abnormalities and structural variants II. (5) Patterns of inheritance I. (6) Patterns of inheritance II.

Practical: Practice: Study of sex chromatin. Demonstration of mammalian chromosomes. Preparation of metaphase spreads.

3rd week:

Lecture: (7) Core DNA technologies I. (8) Core DNA technologies II. (9) Genetic testing in healthcare.

Practical: Seminar: Cytogenetics.

4th week:

Lecture: (10) Analyzing the structure and expression of genes and genomes. (11) Gene regulation and the epigenome I. (12) Gene regulation and the epigenome II.

Practical: Seminar: Transmission genetics. Multifactorial inheritance.

5th week:

Lecture: (13) Gene regulation and the epigenome III. (14) Uncovering the architecture and workings of the human genome. (15) An overview of human genetic variation I.

Practical: Seminar: Pedigree analysis. Polymorphisms. Problem solving and seminar on

mendelian genetics.

6th week:

Lecture: (16) An overview of human genetic variation II. (17) An overview of human genetic variation III. (18) Human population genetics.

Practical: Seminar: Core DNA technologies.

7th week:

Lecture: (19) Molecular pathology: connecting phenotypes to genotypes I. (20) Molecular pathology: connecting phenotypes to genotypes II. (21) Molecular pathology: connecting phenotypes to genotypes III.

Practical: Seminar: Gene regulation and epigenome.

Self Control Test (1st self-control test in extra time.)

8th week:

Lecture: (22) Mapping and identifying genes for monogenic disorders. (23) Complex disease: identifying susceptibility factors and understanding pathogenesis. (24) Cancer genetics and genomics I.

Practical: Seminar: Genetic variations.

9th week:

Lecture: (25) Cancer genetics and genomics II. (26) Pharmacogenetics I. (27) Pharmacogenetics II.

Practical: Seminar: Molecular pathology.

10th week:

Lecture: (28) Pharmacogenetics III. (29) Comparative genomics and genome evolution. (30) Human evolution.

Practical: Practice: Detection of human

polymorphism by polymerase chain reaction.

11th week:

Lecture: (31) Principles of genetic manipulation of mammalian cells. (32) Model organisms and modeling disease. (33) Genetic approaches to treating disease I.

Practical: Practice: PCR evaluation of the human polymorphism experiment.

Self Control Test (2nd self-control test in extra time.)

12th week:

Lecture: -

Practical: Seminar: Cancer genetics.

13th week:

Lecture: (34) Genetic approaches to treating disease II. (35) Personalized medicine.

Practical: Seminar: Pharmacogenetics.

14th week:

Lecture: -

Practical: Seminar: Genomics. Molecular genetics of inherited human diseases. Internet search in databases.

Self Control Test (3rd self-control test in extra time.)

Requirements

The prerequisite of Pharmaceutical Biology II. (second semester subject) is Pharmaceutical Biology I. (first semester subject). Students are not allowed to register until they have a successful ESE in Pharmaceutical Biology I.

Conditions of signing the lecture book:

Attendance

Concerning attendance, the rules laid out in the EER of the University are clear.

The presence of students at laboratory practices ("practices") and classroom practices ("seminars") is obligatory and will be recorded. The professor refuses his/her signature for the semester's course-work in the case of over four weeks of absence, even if the student has an acceptable excuse.

If the student is absent from more than two practices or seminars (taken together), the semester will be accepted only if they pass an examination based on the material covered by the laboratory classes and seminars of the semester (lab test).

Successful accomplishment of the laboratory practices will be acknowledged by signing the laboratory notes made by the student during the practicals. If 3 or more practices will not be accepted, the course will not be signed and accepted. These students must take part in a written exam from the material of practices.

Self-control tests

During the semesters 3 Self Control Tests will be offered. Participation in self-control tests is not mandatory. There will be no make-up or remedial tests. Based on the average % of the three SCTs bonus% will be given (as explained below) to students and are added to the percentage result of the FE.

Rules concerning repeaters:

Attendance of labs and seminars for those repeaters who have a signature from the previous year (i.e. they are repeaters because they either failed the Pharmaceutical Biology I. exam, or they have never taken the exam) is not required. Students should register for the subject electronically during

the first week of the semester. They can participate in the three midterm Self Control Tests in order to qualify for test bonuses and they take the regular exam at the end of the semester. They cannot collect home-work bonus %. Students, who did not get a signature in the previous year, have to register and attend the labs and seminars and they required (as all the other students) to register for the course.

Final Examination (FE):

There will be a written examination at the end of the semester which covers all the material of the two semesters taken in the lectures, seminars, and laboratory practices (for a detailed list see the University Bulletin). The examination questions include multiple choice, and short essay questions, figures, definitions, etc. The marks are based on the student's performance, expressed in percentage (%) as shown in the table below:

Percentage (%)	Grade
0-49.99	fail (1)
50.00 – 61.99	pass (2)
62.00 – 69.99	satisfactory (3)
70.00 – 79.99	good (4)
80.00 – 100	excellent (5)

The percentage values include the student's performance at the FE as well as the bonus percentage they have obtained by taking the three mid-semester tests.

The following table shows the bonus percentage based on the average result of the semester tests. Absenteeism from the test will be scored as 0%.

Average of the 3 tests (%)	Bonus (%)
40.00 – 43.99	1
44.00 – 47.99	2
48.00 – 51.99	3
52.00 – 55.99	4
56.00 – 59.99	5
60.00 – 63.99	6
64.00 – 67.99	7
68.00 – 71.99	8
72.00 – 75.99	9
76.00 – 79.99	10
80.00 – 83.99	11
84.00 – 100	12

Further bonuses can be given for the correct solution of one extra question in each midterm test.

Maximum number of the bonuses in the second semester is 15. Bonuses are calculated only in the year of acquisition.

FE includes cell biology (Pharmaceutical Biology I.) and genetics & molecular biology (Pharmaceutical Biology II). Those students, who ask in advance to have their ESE mark in Pharmaceutical Biology I. to be considered as a part of their grade on the FE will be exempted from

cell biology. They have to take examination only in genetics & molecular biology. However, this examination includes the following topics from the first semester: DNA, chromatin, chromosomes, nucleus, cell cycle and cell division of eukaryotes and prokaryotes, since these topics are covered by genetics, as well. In this case the final grade of the FE is calculated as the average of the results of the ESE and the genetics exam taken at the end of the second semester. None of the grades can be Fail (1) and in dubious cases the result of the genetics exam is weighted more.

Based on the experience of previous years, we assume as a default that students only take exams on the second semester material, and the academic advisor must be notified at least 3 working days before the exam if the student would still take an exam on the first semester material.

The slides of the lectures and up-to-date information can be found at <https://elearning.med.unideb.hu>, username and password is your network-id (same as Neptun-id) and password. You will be able to check the content after the Neptun has registered you to the subject.

Departmental homepage: <https://humangenetics.unideb.hu>

Department of Inorganic and Analytical Chemistry

Subject: **INORGANIC CHEMISTRY PRACTICE**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Practical: **42**

1st week:

Practical: 1. General rules of laboratory work, requirements of laboratory practice (Documented with signature)
2. Safety training (Documented with signature)
3. Light a Bunsen-burner
4. Laboratory preparation of hydrogen with the use of Kipp's apparatus and combustion of hydrogen (demonstration, 1.2)
5. Inventory check of laboratory equipment

2nd week:

Practical: 1. Laboratory scale preparation of chlorine (2.2)
2. Reaction of chlorine with metals (2.6)
3. Burning of hydrogen in chlorine (reading, 2.10)
4. Detection of fluoride ions (2.14)
5. Formation and dissolution silver halides (2.15)
6. Detection of bromide and iodide ions next to each other by using chlorine water (2.16)
7. Detection of chloride ion next to bromide and

iodide ions (Berg reaction) (2.17)
8. Purity test with chemical methods (Ph. Hg. VII. I/186-189. reading)
9. Purity test: Investigation of bromate impurity in potassium bromide (Ph. Hg. VII. II/1066-1067. [12])
10. Unknown sample: Detection of two anions from the following ones: F⁻, Cl⁻, Br⁻, I⁻.

3rd week:

Practical: 1. Electrolytic preparation, detection and oxidizing ability of ozone (reading 3.6)
2. Detection of hydrogen peroxide (3.8.a)
3. Preparation of hydrogen sulfide and its aqueous solution, detection of H₂S. (reading, 3.14)
4. Differentiation of sulfite and sulfate ions (3.27)
5. Formation of nitrogen by synproportionation (reading 4.1)
6. Detection of ammonia and ammonium ions (4.13)
7. Identification of nitrite ions (4.29)

8. Identification of nitrate ions (4.30)
9. Identification of nitrite and nitrate ions with Griess-Ilosvay reagent (4.31)
10. Identification of orthophosphate ions (4.36)
11. Preparation and properties of carbon monoxide (reading, 5.13)
12. Unknown sample: Detection of two anions from the following ones: S^{2-} , SO_3^{2-} , PO_4^{3-} , SO_4^{2-} , Cl^- , NO_2^- , NO_3^- , NH_4^+

4th week:

- Practical: 1. Interaction of lead with acids (5.4.a)
2. Chemical reactions of aluminum with acids and bases (6.3)
 3. Crown ether complexes of alkali metal ions (reading 7.16.a)
 4. Preparation of one of the following complexes:
 - potassium [tetracyanonickelate(II)] (9.37)
 - ammonium [octaiaicozaoxa-decavanadate(V)] hydrate (1/6) (9.33)
 - [tris(2,4-pentanedionato)iron(III)] (9.46.4)
 - Bis(2,4-pentanedionato)vanadium(IV) oxide
 5. Purity test: Investigation of lead impurity in boric acid (Ph. Hg. VII. II/668-669. [5] and I/189. C.7.1.2., standard solution: I/597.)

5th week:

- Practical: 1. Reaction of Ag^+ ; Cd^{2+} ; Hg_2^{2+} ; Hg^{2+} ; Pb^{2+} ; Bi^{3+} and Cu^{2+} on filter paper with iodide ions (demonstration)
2. Oxidation states of 3d transition metals in aqueous solution (9.1)
 3. Aluminothermic preparation of transition metals (reading, 9.2.2)
 4. Formation of transition metal hydroxides and hydroxo complexes (9.23)
 5. Transition metal hydroxides and ammine complexes (9.25)
 6. Formation and investigation of transition metal

sulfides (9.35.a,b,c,d)

1. Detection of a few ions with organic reagents (GEL 9.45.2, 9.45.3, 9.45.4.)
8. Due in of the preparations
9. Unknown sample: Detection of two cations from the following ones: Cu^{2+} , Cd^{2+} , Hg_2^{2+} , Co^{2+} , Ni^{2+} , Zn^{2+} , Mn^{2+} , Fe^{3+} , Cr^{3+}

6th week:

- Practical: 1. Preparation of one of the following complexes:
- $(\text{NH}_4)_3[\text{Cr}(\text{SCN})_6] \cdot 4\text{H}_2\text{O}$ 9.40
 - cis- $\text{K}[\text{Cr}(\text{C}_2\text{O}_4)_2(\text{H}_2\text{O})_2]$ 9.46.1
 - $[\text{Cr}(\text{OCN}_2\text{H}_4)_6]\text{Cl}_3 \cdot 3\text{H}_2\text{O}$ 9.46.3
 - $[\mu\text{-Hydroxo-bis}\{\text{pentaammin-cromine(III)}\}]\text{-chloride}$ 9.26
2. Classification of cations. Reactions of group cation group IV and V.
 1. Study of poorly water soluble alkali metal salts (GEL 7.15.1-3.)
 4. Low-solubility alkaline earth metal salts (reading 8.4)
 5. Flame tests and flame emission spectra of the alkali metals (7.1)

7th week:

- Practical: 1. Due in of the preparations
2. Purity test: Investigation of silver impurity in "bismuth subnitrate, heavy" (Ph. Hg. VII. II/819. [4] and [6]) (0,5 g solid material dissolved in 10,0 cm³ of HNO_3)
 3. Unknown sample: Detection of two cations from the following ones: Na^+ , K^+ , NH_4^+ , Mg^{2+} , Ca^{2+} , Sr^{2+} , Ba^{2+} (One component is a cation of group IV., and the other one is from cation group V.)
 4. Inventory and return of laboratory equipment

Requirements

Requirements

The laboratory course of 42 hours consists of seminars (1 class hours per week) and laboratory practices (5 hours per week). The course is given during 7 weeks. In the seminars the theoretical background of the laboratory investigations and some special or particular problems of analytical

operations of the current experiments are discussed. The practices help students to get knowledge of material and to have training in the qualitative analytical laboratory operations and in compilation of laboratory reports.

Subject: **INORGANIC CHEMISTRY THEORY**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Introduction. Nomenclature of the inorganic compounds and ions. The periodic table. The structure of the periodic table, its relationship with the development of the electronic structure. Blocks within the periodic table. Lattice types. The most important characteristics of ionic, atomic, layered, molecular and metallic lattices. About the elements in general. Grouping of the elements, their abundance. Production of the elements by physical and chemical (metallurgical) methods. Production of non-metallic elements by oxidation. Reduction of metal oxides and halides with carbon, hydrogen and metals. Thermal decomposition of metal halides and carbonyls. Extraction and purification of elements by electrolysis.

2nd week:

Lecture: The hydrogen. Atomic and physical properties, occurrence, chemical properties. Deuterium and tritium. Production and use of hydrogen. Noble gases (Group 18). Atomic and physical properties, occurrence, chemical properties of noble gases. Covalent compounds of the noble gases.

3rd week:

Lecture: The halogens (Group 17). Occurrence, physical and chemical properties of halogen elements. Hydrogen and oxygen compounds and oxoacids of the halogen elements. Structure and strength of oxoacids. Their production and use. The chalcogen elements (Group 16). Occurrence, physical and chemical properties of the

chalcogen elements. The production and use of oxygen and sulphur.

4th week:

Lecture: Hydrogen compounds of oxygen and sulfur. Water, hardness of water and water softening. Complexes of oxygen, their biological importance. General characterization of oxides and oxoacids.

5th week:

Lecture: Oxygen compounds and oxoacids of sulfur. The nitrogen group (Group 15). Occurrence, physical and chemical properties of elements of the nitrogen group. Production and use of nitrogen and phosphorus. Production and use of ammonia.

6th week:

Lecture: Nitrogen oxides and oxoacids: structure, chemical properties, practical significance. General characterization of oxoacids of phosphorus, their practical significance.

7th week:

Lecture: The carbon group (Group 14). Occurrence, physical and chemical properties of the elements of carbon group. Production and use of elements. Characteristic features of the chemistry of carbon and silicon. The main types of carbon compounds. Carbon and silicon oxides, oxoacids and their derivatives.

8th week:

Lecture: General characterization of the metals. The elements of the boron group (Group 13).

Occurrence, physical and chemical properties of aluminum. Production and use of aluminum. The most important compounds of aluminum.

9th week:

Lecture: Elements of the s-block (Group 1-2). Physical and chemical properties of the alkali metals, their occurrence, production and use. Dissolution of alkali metals in liquid ammonia. Covalent compounds, complexes, crown ethers and cryptands of the alkali metals. Physical and chemical properties of alkaline earth metals, their occurrence, production and use. The most important compounds of alkaline earth metals: hydrides, halides, oxides, hydroxides, salts formed with mineral acids, complexes. The role of alkali metal and alkaline earth metal ions in biological systems.

10th week:

Lecture: d-block metals (Group 3-12): general characterization of the transition metals. The electronic structure of the transition metals, change in oxidation numbers, atomic and ion size. Horizontal and vertical similarity of transition metals. Physical and chemical properties of transition metals, their occurrence and production. The basics of the hard-soft acid-base (HSAB) theory. Ions of transition metals in aqueous solutions, conditions for the existence of hydrated cations, oxocations and oxoanions. Formation of iso- and heteropolyacids.

11th week:

Lecture: General characterization of compounds of the transition metals: lattice types of halides,

their grouping. Oxides of transition metals, their acid-base character. Transition metal sulfides. Elements of the d-block. Physical and chemical properties of chromium, molybdenum and manganese, their occurrence, production and use. Compounds of manganese with different oxidation states and their practical importance. The biological role of molybdenum and manganese.

12th week:

Lecture: Physical and chemical properties of iron, cobalt and nickel, their occurrence, production and use. Chemistry of iron and steel production. The biological role of iron. Physical and chemical properties, occurrence and use of platinum metals (Ru, Rh, Pd; Os, Ir, Pt). The role of platinum metals in medicine.

13th week:

Lecture: Physical and chemical properties of copper, silver and gold, their occurrence, production and use. The role of copper in biological systems, the medicinal applications of silver and gold. Physical and chemical properties of zinc, cadmium and mercury, their occurrence, production and use. Biological role of zinc.

14th week:

Lecture: f-block metals: the lanthanoids and actinoids. Electronic structure, changes in properties within the period. The role of thorium and uranium in the utilization of nuclear energy. The use of rare earth metals and other radioactive isotopes in medicine.

Department of Organic Chemistry

Subject: **ORGANIC CHEMISTRY PRACTICE I.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Seminar: **14**

Practical: **42**

1st week:

Seminar: Receiving of laboratory equipments, safety education. Crystallization from water and organic solvent. Controlling of purity by thin-layer chromatography (TLC), and determination of melting point. Filling in of laboratory notes.

Practical: Receiving of laboratory equipments, safety education. • Crystallization. • Crystallization of acetanilide from water. (p. 62.) • Crystallization of benzanilide from methanol. (p. 62.) • Controlling of the purity by thin-layer chromatography (TLC), and determination of melting point. (p. 64.) • Filling of laboratory notes

2nd week:

Seminar: Vacuum, simple and steam distillation. Isolation of nicotine from tobacco leaves.

Practical: • Distillation. • Vacuum and simple distillation of water. (p. 63.) • Steam distillation. • Isolation of nicotine from tobacco leaves. (p. 64.) • Filling of laboratory notes.

Self Control Test

3rd week:

Seminar: Isolation of caffeine from tea leaves. Separation of organic compounds with liquid-liquid extraction.

Practical: • Liquid-liquid extraction. • Isolation of caffeine from tea leaves. (p. 65.) • Separation of 1,3-dinitrobenzene and 3-nitroaniline with liquid-liquid extraction. (p. 67.) • Filling of laboratory notes.

Self Control Test

4th week:

Seminar: Column chromatography. Identification of hydrocarbons with test tube reactions.

Practical: • Separation of acetanilide and m-dinitrobenzene by column chromatography. (p. 73.) • Identification of hydrocarbons (test tube reactions). (p. 68.) Determination of unknown compound.

Self Control Test

5th week:

Seminar: Identification of organic halides with test tube reactions.

Practical: • Identification of organic halides (test tube reactions). (p. 72.) Filling in of laboratory notes. Cleaning of the laboratory glasswares. Deposit the laboratory equipments.

Self Control Test (Comprehensive written test)

Requirements

Conditions on signing the lecture book: The laboratory work is evaluated by a five-level practical grade.

Prerequisite: General Chemistry Theory and Practice.

The Organic Chemistry Seminar and Laboratory Practice will be kept in three groups. Each group will exercise for 5 weeks.

Subject: **ORGANIC CHEMISTRY THEORY I.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: **56**

1st week:

Lecture: The definition and brief history of organic chemistry. Overview of the basic general chemical concepts needed for this subject. The basic nomenclature systems in organic

chemistry: common or trivial names and systematic nomenclature. Basic rules to generate systematic names of organic compounds; substitutive and functional class nomenclature. The rules to generate the names the groups

derived from hydrocarbons. The rules to generate the names of unbranched and branched (saturated and unsaturated) hydrocarbons. Description of functional groups in organic compounds. An overview of the most important organic compound groups based on their functional groups. The effect of functional groups on the electron structure of compounds.

2nd week:

Lecture: Classification and chemical bond of hydrocarbons. A brief summary of the theories of the chemical bond: the shared electron pair model, the valence bond model. Covalent and ionic bonds. The basics of LCAO-MO theories, types of atomic and molecular orbitals. Bi- and polycentric molecular orbitals, delocalization. VB theory, resonance structures and rules of their writing. Hybridization.

3rd week:

Lecture: Electron shift phenomena, inductive and mesomeric effects, conjugation and hyperconjugation. Secondary bonds, intermolecular interactions, hydrogen bond, dipole-dipole, dipole-induced dipole interactions.

4th week:

Lecture: Characterization of the structures of alkanes and cycloalkanes. Review their conformational and physical properties. Basics of stereochemistry: characterization of constitutional, conformational and configurational isomers. Chirality, types of chiral molecules. The concept of enantiomers and diastereomers, general comparison of their chemical and physical properties. Absolute and relative configuration. Optical activity. The representation of organic molecules. The absolute configuration of chiral compounds, Fischer and Cahn-Ingold-Prelog convention. The role of chirality in drug chemistry.

5th week:

Lecture: Basics of the structure elucidation of organic compounds.

6th week:

Lecture: Elemental reactions. Definitions of transition state, intermediates, Gibbs energy, kinetical and thermodynamical parameters of chemical reactions. Multi-step reactions (consecutive reactions), intermediates. Hammond postulate. Parallel (competitive) reactions. Thermodynamic and kinetic control. Reactivity and selectivity. Reagents and reactive intermediates. Classification of organic chemical reactions based on attack agent and type of the reaction. Brönsted and Lewis acid-base theory, "hard" and "soft" acids and bases.

7th week:

Lecture: Chemical properties of alkanes, radical substitution, chain reaction. Statistical and regioselective halogenation and interpretation based on radical stability in alkane halogenation. Sulphonation, sulphochlorination, nitration and oxidation of alkanes. The basic petrochemical processes (pyrolysis, cracking, isomerization) and their industrial significance. The most important natural sources and the synthetic methods of alkanes. Steroids

8th week:

Lecture: The characterization of the structure of alkenes, cycloalkenes, di- and polyenes. The hindered rotation: characterization of E / Z isomers. Synthesis of alkenes, cycloalkenes. Physical and chemical properties of alkenes and cycloalkenes. Electrophilic and radical addition reactions and practical significance. Interpretation of the regioselectivity of the addition reactions; the Markovnikov's rule.

9th week:

Lecture: Types of polymerization. Substitution in allylic position, interpretation of the stability of allylic intermediates. Oxidation of alkenes. Addition of conjugated dienes, partial and complete addition. 1,2 and 1,4 addition and its interpretation based on kinetic and thermodynamic control. Diels-Alder

cycloaddition.

10th week:

Lecture: Characterization of the structure of alkynes and their physical properties. The stability and synthesis of alkynes. Chemical transformations of alkynes: C-H acidity, addition reactions and their significance. The role of acetylene in the chemical industry, coal-based chemical industry

11th week:

Lecture: The concept and the interpretation of aromaticity. Neutral and charged homo and heteroaromatic systems. The type and mechanism of the most important aromatic electrophilic substitution reactions (halogenation, nitration, sulphonation, Friedel-Crafts acylation and alkylation). The SEAr reactions of substituted benzene derivatives – the reactivity and regioselectivity. Classification of substituents and interpretation of their effect on reactivity and regioselectivity.

12th week:

Lecture: Electrophilic substitution reactions of five- and six-membered heteroaromatic base compounds. Addition reactions of monocyclic aromatic hydrocarbons. Reactions of aromatic hydrocarbons containing alkyl substituents, the stability of benzyl-type reactive intermediates.

Most important representatives of polycyclic aromatic hydrocarbons.

13th week:

Lecture: Classification of halogenated hydrocarbons, characterization of their structure and physical properties. The effect of the structure of the hydrocarbon skeleton, and the quality of the halogen on the strength of the C-Hlg bond and reactivity. Synthesis of halogenated hydrocarbons. Reactions of halogenated hydrocarbons. Interpretation of decreased, normal and high reactivity of halogenated hydrocarbons. Nucleophilic substitution and elimination of halogenated hydrocarbons. Interpretation of the mechanism of these reaction (SN1, SN2; α - and β -elimination; E1, E2 and E1cB).

14th week:

Lecture: Reaction of halogenated compounds with metals. The basics of chemistry of organometallic compounds. Their bonding system, the term "umpolung". Synthesis and reactivity of organometallic compounds. Organometallic compounds as nucleophiles and carbanion equivalents. C-C bond formation with organometallic reagents Grignard compounds and their application. Synthesis and interconversion of organometallic compounds, transmetallation.

Requirements

Lecture: terminal examination.

Requirement level: Sufficient level of acquisition of the knowledge given in the lecture.

Prerequisite for applying for the exam: Obtaining a signature, for which the lectures are min. 30% must attend. This is checked electronically via the eLearning system.

Department of Physical Chemistry

Subject: **COLLOID AND SURFACE CHEMISTRY THEORY**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: "A": What is colloid and surface chemistry. Classification of the dispersed systems. Type of colloids. Typical everyday colloids. Preparation of colloids.

"B": The basic characteristics of colloid systems: dispersity, morphology, spatial distribution, interparticle interactions, normal distribution. Thermodynamic and kinetic stability.

2nd week:

Lecture: "A": Definition of energy of activation. Basic transport properties. Description of Brownian motion, random walk. Diffusion coefficient, average distance. Einstein-Stokes equation. Sedimentation equation. Diffusion flux and diffusion equation. Measuring of size distribution with different techniques (osmosis, diffusion, light scattering, Donnan potential).

"B": Interfacial chemistry. Definition of interfacial region, types of interfaces. Surface tension. Surface tension depends on the intermolecular interactions. Determination of surface tension. Temperature dependence of surface tension. Spreading. Monomolecular films.

3rd week:

Lecture: "A": Curved interfaces. The effect of surface curvature on the vapor pressure of a liquid. Kelvin equation. Meniscus, contact angle, wetting, spreading. Hydrophilic, hydrophobic surfaces.

"B": Adsorption. Hardy-Harkins best continuity rule. Surface activity and inactivity. Gibbs isotherm equation. Monolayer and multilayers (Langmuir-Blodgett). Physical state of the monolayers. Application of monolayers. Film formation. Analysis, membrane modeling, water

conservations, sensors. Vesicles, liposomes.

4th week:

Lecture: "A": Solid surfaces. Molecular structure and characterization. Adsorption at the gas-solid interface, adsorption isotherms. Type of isotherms. Langmuir, BET. Freundlich. Capillary condensation. Adsorption from solutions.

Applications. Theory and types of chromatographies. Retention time.

"B": Association colloids. Amphipathic molecules. Surfactants, physical properties of solutions of surfactants. Micelles. CMC, dependence on chain length and salt concentration. The Krafft point. Detergency, chemistry of washing. Solubilization. Applications in medicine. Lung surfactants.

5th week:

Lecture: "A": Charged surfaces. Origin of surface charge, electrodes. Mulliken experiment, elementary charge. Electrical double layer models. Hemholtz, Gouy Chapman and Stern models.

"B": Electrical double layer. Zeta-potential. Electrophoresis. Reversal of sign of the Zeta-potential. Overcharge.

6th week:

Lecture: "A": Stability of dispersion colloids.

Electrostatic theory: DLVO. Inter-particle forces. Hamaker-equation. Hardy-Schulze rule. Stability ratio. Critical coagulation concentration.

Applications of the DLVO theory. Steric and electrostatic stabilization.

"B": Macromolecules. Definitions and types. Structure and size of polymers. Determination of size. Sorption of polymers. Bridging flocculation. Depletion flocculation lyophilic colloids as

sensitizers. Targeted medicine.

7th week:

Lecture: "A": Emulsion. Emulsion types. Identification of emulsion type. Emulsion stability. Emulsifiers HLB (hydrophilic -lipophilic balance) values. Physical properties of emulsions. Breaking emulsions. Foam. Foam Stability. Inhibition and breaking of foam.

Examples.

"B": Rheology. Theory and definition of viscosity. Rheological types of matter. Shear rate, basic equations. Viscosity- and rheometers. Viscosity of solutions of colloids. Response of matter to shear: typical cases. Structure of coherent systems. Gels, creams: thixotropy.

Requirements

Attendance on the lectures is highly recommended. The evaluation is based on the total score of a written test, 50% is necessary to pass. More detailed information will be presented on the first lecture.

Subject: **PHYSICAL CHEMISTRY THEORY**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: **28**

Seminar: **14**

1st week:

Lecture: General information.

Seminar: General information.

2nd week:

Lecture: Basic notions of thermodynamics.

Seminar: Basic notions of thermodynamics.

3rd week:

Lecture: First law of thermodynamics.

Seminar: First law of thermodynamics.

4th week:

Lecture: Second and third laws of thermodynamics.

Seminar: Second and third laws of thermodynamics.

5th week:

Lecture: Phase transitions.

Seminar: Phase transitions.

6th week:

Lecture: Mixtures.

Seminar: Mixtures.

7th week:

Lecture: Chemical equilibrium.

Seminar: Chemical equilibrium.

8th week:

Lecture: Transport processes.

Seminar: Transport processes.

9th week:

Lecture: Electrical conductance.

Seminar: Electrical conductance.

10th week:

Lecture: Galvanic cells.

Seminar: Galvanic cells.

11th week:

Lecture: Reaction kinetics - 1

Seminar: Reaction kinetics - 1

12th week:

Lecture: Reaction kinetics - 2

Seminar: Reaction kinetics - 2

13th week:

Lecture: Interfacial phenomena

Seminar: Interfacial phenomena

14th week:

Lecture: Colloids.

Seminar: Colloids.

Requirements

The semester is closed with written examination. The examination contains theoretical material as well as problems from those solved in the seminars.

The prerequisite of the examination is the successful completion of the seminars.

Seminar requirements:

-Attendance at seminars is mandatory.

(Properly justified absence is possible up to 3 times - the seminar leader must be notified in advance of the planned absence or a medical certificate is required. In case of a larger number of absences, we cannot accept the semester.)

-Successful writing of tests.

(It is obligatory to write 2 tests during the semester. Successful writing of these and the achievement of at least 50% on the basis of the average of the two ZHs is a necessary condition for admission to the exam.)

Division of Biophysics

Subject: **BIOPHYSICS**

Year, Semester: 1st year/2nd semester

The number of teaching hours:

Lecture: **14**

Practical: **15**

1st week:

Lecture: Introduction to the course. Generation and absorption of X-rays. X-ray contrast materials.

Lecture: Fluorescence spectroscopy, fluorescence techniques.

Practical: Introduction.

2nd week:

Lecture: Lasers and their biomedical applications. Photodynamic therapy.

Lecture: Optical and electron microscopy.

Practical: P1: Measurement of nuclear radiation

3rd week:

Lecture: Ionizing radiations and their interaction with materials. Dosimetry, tissue effects, detection of radiation.

Lecture: Research, diagnostic, and therapeutic application of stable and radioactive isotopes. Contrast materials, radiopharmaceutical.

Practical: P2: Spectrofluorimetry

4th week:

Lecture: Medical imaging (CT, PET, SPECT, MRI)

Lecture: Diffusion at the molecular level,

statistical interpretation. Fick's 1st law. Thermo-diffusion. Osmosis	Lecture: Methods of pharmacological research. Gel electrophoresis, isoelectric focusing, blotting. Detecting molecular interactions (SPR, FCS, FRET)
Practical: P3: Determination of diffusion constant	
5th week: Lecture: Structure of biological membranes. Membrane transport.	Lecture: Biophysics of drug delivery. Nanotechnology approaches.
Lecture: Pharmacology of ion channels (gating, selectivity). Patch-clamp technique.	Practical: Spare practical(s)
Practical: P4: Refractometry	8th week: Practical: Spare practical(s)
6th week: Lecture: Origin of membrane potential Resting potential, action potential, electric excitability.	9th week: Practical: Practical exam
Lecture: Fluid mechanics, blood circulation. Newtonian fluids, viscosity, creams, and emulsions.	10th week Self-control and grade offering test.
Practical: P5: Light microscopy, Optical measurements	Online materials: Department: https://biophys.med.unideb.hu/en Physics: http://hyperphysics.phy-astr.gsu.edu/hbase/index.html . Society: http:// https://www.biophysics.org/
7th week:	

Requirements

Compulsory reading:

Lecture materials and description of lab practical (published on the department web page).
Medical Biophysics (Editors.: S. Damjanovich, J. Fidy, J. Szöllösi, Medicina, Budapest, 2009, ISBN: 978-963-226-127-0)

Condition for signing the lecture book:

- All labs have been done (if one is missed, only one repetition option is available)
- Lab exam attended (no make-up is available)
- Signing up for the electronic course PHARM-Biophysics at the exam.unideb.hu website by the end of week 3 (the site can only be reached from inside the University network)
- Lecture attendance is strongly recommended.

Practical requirements

Completing the laboratory practical exercises is mandatory. Before the lab, students complete a short test (solving the tasks may require simple calculations), which measures their preparation for the lab on a scale of 1 to 5. The student must achieve at least 50% of the maximum score on the test to begin the lab. If the test is unsuccessful, it must be repeated at a specified time. If the lab is missed, the lab must be made up. The average of the tests yields one exam mark. If the average of the tests

for all labs is excellent (5), the student receives one (1) bonus exam mark.

A lab measurement protocol (a notebook with fixed pages) must be recorded during the labs to reconstruct the measurements from the notes. Students must arrive prepared for the labs, which including writing of the theoretical part of the lab to be performed. Each lab exercise is graded on a scale of 1 to 5. If unprepared, the exercise must be repeated, in which case a maximum of 2 points can be obtained. The student's responsibility is to immediately organize the make-up lab by obtaining written permission from the tutor at the end of the logbook.

Students take a lab practical exam at the end of the semester, in which they receive a grade between 1 and 5.

Exams and grades:

- **Lab (test grade, lab practical grade, lab practical exam grade) – max. 15+1 points**
- **Biophysics grade-offering exam or written exam (electronic) – max. 85 points**

Total: 100+1 points.

Grades:

- 50< pass (2)
- 60< satisfactory (3)
- 70< good (4)
- 80< excellent (5)
- Please note that lab and biostatistics work completed during the semester constitutes a compulsory part of the final score, which cannot be changed during the exam period. Therefore, take studies seriously throughout the semester.

Repeaters

The signature obtained for the subject earlier is preventing students from attending labs.

Exempted students can choose to keep their scores from last year or take the exams with the rest of the class during the semester. Exemption-related decisions must be made before the end of the third week of education, and the study advisor at biophysedu@med.unideb.hu should be notified accordingly. Without written notification, we assume that the score from last year remains in effect and that no further changes will be possible. Lab exemptions, scores, and exams are independent of each other.

Course Coordinator: Zsolt József Bacsó M.D., Ph.D.

Division of Biomathematics

Subject: **BIOSTATISTICS**

Year, Semester: 1st year/2nd semester

The number of teaching hours:

Lecture: **14**

4th week:

Lecture: 1. Set theory, Venn diagrams. Probability, conditional probability. Independent events. Descriptive statistics (measures of central tendency and spread; percentiles, quartiles). Histograms, box and whisker plot.

5th week:

Lecture: 2. Discrete random variables. Characterization and graphical representation of discrete distributions (probability distribution and cumulative distribution function). Binomial and Poisson-distribution.

6th week:

Lecture: 3. Continuous random variables; probability density function. Normal and standard normal distribution. Sampling. Biased and unbiased estimation. Central limit theorem. Standard error of the mean.

7th week:

Lecture: 4. Basics of hypothesis testing: null and alternative hypothesis, level of significance, one and two-tailed tests. Type I and type II error. z-test and one sample t-test.

8th week:

Lecture: 5. Statistical tests: paired t-test, F-test, unpaired t-test.

9th week:

Lecture: 6. Clinical implications of conditional probability, screening tests (specificity, sensitivity, positive- and negative predictive value). ROC curve. Epidemiologic investigations: odds ratio and relative risk. Kaplan-Meier curve.

12th week:

Lecture: 7. Biostatistics grade offering test.

Requirements

1. The aim of the course:

The aim of the subject is to give an introduction to biostatistical methods, which can be used in different branches of medicine to solve biostatistical problems and to evaluate experimental results. In addition, providing a solid theoretical foundation the course will also introduce the students to the art and science of performing the simplest calculations.

2. Short description of the subject:

Set theory, probability, conditional probability. Descriptive statistics (determination of mean, median, mode, standard deviation from data set; construction of histograms, box and whisker plot). Discrete and continuous random variables; cumulative distribution function and density function. Binomial, Poisson, normal, and standard normal distribution. Sampling techniques and characterization of samples, biased and unbiased estimate, the central limit theorem. Hypothesis testing (z, t, and F tests). Screening tests and epidemiologic investigations in medicine.

3. Type of the exam:

Colloquium (written).

4. Requirements for the Biostatistics course

4.1. Lectures:

Attendance to classes is mandatory. Students must not miss more than two classes. No certificates, including a medical certificate, are accepted for the absences. Making up for missed classes is not possible.

4.2. Requirements for signing the lecture book

Signing of the lecture book is denied if there are more than two absences from groupwise classes.

4.3. Grade-offering course test and final exam:

Students will write a grade-offering course test on week 12. Writing the grade-offering course test is not compulsory but strongly recommended. The grade-offering test does not count as an A chance exam. Writing the grade-offering test is only possible at the appointed time and there will not be any alternative appointment for writing it. The structure of this test will be identical to that of the final exam. A grade of pass (2) or better achieved on the grade-offering test is valid for the final exam.

Students must take a written exam. Exams will be held once per two weeks during the exam period.

The exam is written.

Structure and evaluation of the grade-offering test and the final exam:

The structure of the final exam: theoretical questions (true or false questions, multiple choice questions, fill-in questions etc.), graphs and calculations. A maximum 100 points can be obtained in the test. Based on the final score (FS) of the exam the following grades are offered:

FS<55	fail (1)
55≤FS<65	pass (2)
65≤FS<75	satisfactory (3)
75≤FS<85	good (4)
85>=FS	excellent (5)

Evaluation of the grade-offering test and the final exam is identical.

A grade of 2 (pass) or better achieved on the grade-offering test is valid for the final exam.

4.4. Rules for C chance exams:

Evaluation of C-chance exams is performed according to the following table:

	Outcome of the exam
Result of the test is a pass ($\geq 55p$)	exam grade is according to the result of the test (see section 4.3)
Result of the test is a fail, but at least 40% ($\geq 40 p$)	oral exam
Result of the test is less than 40% ($< 40 p$)	final exam grade: FAIL

5. Compulsory reading material:

Educational material published on the eLearning platform of the course can be downloaded as pdf format (elearning.med.unideb.hu – Department of Biophysics and Cell Biology/English Courses/2nd semester/Biostatistics (MB_E))

6. Recommended reading material:

- Wayne W. Daniel: Biostatistics, A foundation for Analysis in the Health Sciences, John Wiley&Sons
- Practice problems in biostatistics (editors: Zoltán Varga and Tibor G. Szántó). University of Debrecen, Department of Biophysics and Cell Biology, Division of Biomathematics, 2022, ISBN 978-963-490-459-5.

7. Exemptions:

Applications for exemption from the biostatistics course must be turned in to the Credit Transfer Committee. Such requests cannot be directly turned in to the Biomathematics Division or the Department of Biophysics and Cell Biology.

8. Information for repeaters:

For repeaters the attendance on lectures is not compulsory. Students repeating the course are subject to the same rules and requirements as those taking the course for the first time.

9. Rules for calculators:

Rules for calculator usage during course tests and the final examination. To ensure a fair evaluation, to avoid disturbances in the testing room, and to protect the security of the test material the following types of calculators are NOT permitted:

- calculators with built-in computer algebra systems (capable of simplifying algebraic expressions)
- pocket organizers, handheld or laptop computers
- any device capable of storing text. Calculators with a typewriter keypad (so-called QWERTY

devices), electronic writing pads and pen-input devices are not allowed either. Calculators with letters on the keys (e.g., for entering hexadecimal numbers or variable names) are permitted if the keys are not arranged in QWERTY format.

- calculators or other devices capable of communicating with other devices
- calculators built into wireless phones
- calculators with paper tape or models that make noise

In general, students may use any four-function, scientific or graphing calculator except as specified above. Sharing calculators during tests is not allowed, and the test proctor will not provide a calculator.

CHAPTER 17 ACADEMIC PROGRAM FOR THE 2ND YEAR

Department of Foreign Languages

Subject: **HUNGARIAN LANGUAGE II/1**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Emlékszik?

2nd week:

Practical: Tegezés-Önözés

3rd week:

Practical: Élelmiszerek 1.

4th week:

Practical: Élelmiszerek 2., Étkezések, étteremben 1.

5th week:

Practical: Étkezések, étteremben 2.

6th week:

Practical: Összefoglalás

7th week:

Practical: Mid-term test (written)

Self Control Test

8th week:

Practical: A városban 1.

9th week:

Practical: A városban 2.

10th week:

Practical: Édes otthon 1.

11th week:

Practical: Édes otthon 2.

12th week:

Practical: Összefoglalás

13th week:

Practical: End-term test (written)

Self Control Test

14th week:

Practical: End-term test (oral)

Self Control Test

Requirements

Requirements

Attendance

Attending language classes is compulsory. If a student is late it is considered as an absence.

Students can miss only 10 percent of the classes that is maximum 2 occasions. Making up with another class is not allowed. Medical notes are not accepted.

The teacher evaluates active participation in each class. Students are not allowed to share coursebooks during classes; therefore, if a student fails to bring the coursebook for the second time, attendance for that class is not granted.

Testing, evaluation

Students must sit for two written language tests, and an oral exam. Schedule for the tests:

- Week 7: mid-term written test
- Week 13: end-term written test
- Week 14: end-term oral test

During written and oral examinations (mid-term and end-term exams), students are not allowed to bring any devices suitable for communication or data storage (e.g. electronic devices) into the examination venue. If the supervisor detects the presence of such a device, the examination will be suspended and disciplinary proceedings will be initiated in writing to the Dean.

A further minimum requirement is passing 10 word quizzes during the semester. There are five word quizzes before and another five after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all the words before the mid-term and end-term tests. A missed word quiz can be postponed by a week and students can take it only with their own teacher. Missed word quizzes cannot be made up for on the day of the test. Students can get bonus points (5-5%) by taking two extra quizzes containing 20 sentences each, before the mid-term and end-term tests. The sentences are taken from the units of the coursebook.

The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they will fail the whole course. The results of the written tests and the oral exam are combined and averaged.

Based on the final score the grades are given as follows.

Final score	Grade
0-59 %	fail (1)
60-69 %	pass (2)
70-79 %	satisfactory (3)
80-89 %	good (4)
90-100 %	excellent (5)

If the average score of the written tests is below 60%, the student is allowed one remedial written exam covering the failed material. The remedial exam must be completed before the end of Week 14. Failure to attend the remedial exam results in a score of 0% for that test. The oral exam may only be taken if the written tests have been passed.

Coursebook: Fodor, Marianna – Rozman, Katalin: Beszélek magyarul?! I.

Department of Inorganic and Analytical Chemistry

Subject: **ANALYTICAL CHEMISTRY THEORY**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **42**

1st week:

Lecture: Introduction: Analytical chemistry and

its objectives. The analytical process.

Measurements. Equilibria in solution and their

quantitative analytical applications.

The need for industrial and laboratory separations, a summary characterization of the most important general methods. The relationship of the separations with the physical and chemical properties of the materials, corresponding to the properties. Overview and planning of separation operations that utilize them. Processes for partial or complete removal of solvent: concentration, partial evaporation, complete evaporation. Laboratory and industrial evaporation equipments. Features, equipments, importance, scope of use of film evaporation. Structure and operation of a centrifugal evaporator, and evaporation equipment using a rotating gas stream.

2nd week:

Lecture: Acid-base equilibria (based on Brönsted-Lowry theory). Basic concepts: bases, acids, ampholytes, self-dissociation, base strength, acid strength, dissociation constant, association constant, pH calculations: pH of strong acids and strong bases, weak acids, weak bases and buffers, pH of polyprotic acids and bases, overlapping parallel acid-base equilibria: macro- and micro constants.

Concentration by partial freezing of solvent, complete evaporation (to dryness). Scopes of application. Basic principles of spray drying, its implementation on a small and large scale, its use in the food and pharmaceutical industries.

Physical principles of freeze-drying (lyophilization), phenomenon of vacuum sublimation. Construction and operation of freeze-drying equipment. The importance of freeze-drying in the production of food and pharmaceutical products. Separation of a mixture of solid materials based on different physical properties: sorting, edging, magnetic separation, flotation.

3rd week:

Lecture: Acidimetric and alkalimetric titrations: titration curves and their calculations, factors influencing the shape of the titration curves, end-

point, equivalence point, methods of endpoint indication (Gran function and its applications).

Applications of acid-base titrations.

Separation of substances based on differences in solubility, selective dissolutions, crystallizations.

Removal of solid materials from a fluid medium.

General features of sedimentation, analysis and use of Stokes' law in sedimentation and filtration processes.

Laboratory and industrial implementations of sedimentation. Decanting.

Application of centripetal force to accelerate sedimentation processes, theory and practice of centrifugation.

Laboratory and industrial centrifuges, ultracentrifugation. Break-down and separation of emulsions by centrifugation.

Separation of gas mixtures by centrifugation, isotope enrichment by gas centrifuge.

Separation of gas mixtures by centrifugation, isotope enrichment by gas centrifuge.

Separation of gas mixtures by centrifugation, isotope enrichment by gas centrifuge.

4th week:

Lecture: Complex formation equilibria. Basic concepts: stepwise equilibrium, equilibrium constants, concentration distribution curves, simultaneous equilibria influencing complexometric reactions, conditional stability constant, chelate effect.

Filtration. Filtration from a liquid medium. The theory of filtration, the importance and role of the filter cake design, and the correct practice of its design. Filter aids, The correct practice of laboratory filtration. Filtration from a gas stream, filtration using a filter medium, dust separation with electric charges.

Filtration. Filtration from a liquid medium. The theory of filtration, the importance and role of the filter cake design, and the correct practice of its design. Filter aids, The correct practice of laboratory filtration. Filtration from a gas stream, filtration using a filter medium, dust separation with electric charges.

5th week:

Lecture: Complexometric titrations: titration curves and their calculations, factors influencing the shape of the titration curves, indication in complexometry, selective complex formation reactions. Applications of complexometric titrations.

The types of filtration, the classification of filtrations based on the quality of the filtered particles, the materials and porosity of the filter medium, the applied pressure, and the direction of the filtration. Filtering tools and equipments. Classification of filters based on the pressure

used, the geometric design of the filter medium, Classification of filters based on the direction of the liquid flow. Atmospheric and vacuum filtration, microfiltration, ultrafiltration, nanofiltration, tangential filtration.

6th week:

Lecture: Precipitation equilibria: Basic concepts: solubility, solubility product, factors influencing the solubility (the common ion effect, temperature effect, solvent effect, effects of simultaneous solution equilibria: protonation/hydrolysis or complex formation). Titration based on precipitate formation: titration curves and their calculations, shape of titration curves, endpoint indication. Practical applications (argentometry).

General discussion of extraction, the most important types of extraction procedures.

Implementation of liquid-liquid extraction, design of the extraction process based on its characteristics and distribution properties.

Characteristics of solid-liquid extraction, Soxhlet extraction, methods of implementation, operation of its devices. Characteristics, comparison, scope of use of solid phase extraction (SPE) and solid phase microextraction (SPME). The phenomenon of osmosis, its significance, the phenomenon of reverse osmosis, analytical and practical uses of osmosis and reverse osmosis. Concept of dialysis, comparison with reverse osmosis.

Dialysis manually and with mechanical equipment, importance of hemodialysis.

7th week:

Lecture: Equilibria of redox systems: Basic concepts: redox potential, Nernst equation, equilibrium redox potential, equilibrium constant and redox potential, factors influencing the redox potential. Redox titrations (oxidimetry, reductometry): titration curves and their calculations, shape of titration curves, practical applications (permanganometry, chromatometry, bromatometry, iodometry).

About chromatographies in general. Comparison of column chromatography and planar

chromatography. Properties of paper chromatography, its current role in the separation of radioisotopes. General description of thin layer chromatography, its properties, scope of use, significance in pharmaceutical research and quality control. Thin layer chromatography devices range from simple manual implementation to the most advanced instrumental versions. The most important types, characteristics, scope of use of chromatographic layers. Applying patterns to the layers (spotting). The most important features and requirements of manual and automatic developing chambers. Drying, heat treatment, development of developed plates, making spots or bands visible. Documentation, evaluation and quantitative analysis of the layers. Two-dimensional thin-layer chromatography features, importance, application possibilities.

8th week:

Lecture: Methods of analytical separation. Basic concepts: distribution constant, distribution coefficient, separation factor. Separation methods with phase transition. Theory and practice of gravimetry. Extraction methods: liquid-liquid, solid-liquid extraction, distillation. pH dependence of solute partitioning processes. Determination of metal ions by extraction. Gas chromatography. General construction of gas chromatographs, requirements for the gas supply system, properties of the most important GC gases, purity requirements. The role, importance, and most important requirements of sample preparation for GC or other chromatographic methods. Possibilities of sampling. Handling of liquid samples, head space sampling. Automatic and manual solid phase microextraction (SPME), adsorption and thermal desorption.

9th week:

Lecture: Chromatographic methods: Basic concepts: classification, separation techniques, chromatographic process (HETP, number of theoretical plates, basic equation of chromatography, peak broadening, van Deemter

equation, resolution and its optimization), characteristic values of a chromatogram (retention parameters, quantitative evaluation methods).

The role of GC oven, its most important features. Evaporator (inlet): the role, characteristics, most important constructions. Types, structure, polarity, scope of use of GC columns. The most important representatives of GC detectors. Flame Ionization Detector (FID), Electron Capture Detector (ECD), Mass Spectrometer Detector (MSD). Possibility of preparative gas chromatography. Implementation of two-dimensional (2D-GC, GCxGC) gas chromatography, its importance and scope of use. Chromatographic measurement systems - network communication.

10th week:

Lecture: Gas chromatography: components of a gas chromatograph, detectors, role of temperature in gas chromatography, practical applications. Liquid chromatography: modules of a liquid chromatograph, detectors. Electrophoresis: slab gel electrophoresis and capillary electrophoresis. High pressure liquid chromatography. (HPLC) and ultra-high pressure chromatography (UHPLC). The structure of the devices, the function of each component. Solvent supply, eluent storage vessels, solvent delivery lines. Degassing task, importance, types. Ultrasonic degassing, helium degassing. vacuum degassing, preparation of eluents, possibilities and means of gradient formation.

11th week:

Lecture: Basic concepts: signal, noise, sensitivity, limit of detection, reproducibility, accuracy, precision, calibration, signal to noise ratio, basics of error calculation. Discarding questionable data points. Q-test, t-test. GLP, GMP. The most important types and operation of the HPLC pump. The role and most important features of the autosamplers (automatic sample changer and automatic injector). Sample injection with a six-port valve. HPLC columns, the main

types of HPLC separations, normal phase chromatography, reversed phase chromatography, the concept, implementation, role and significance of isocratic and gradient elution.

12th week:

Lecture: Spectroscopic methods: Origin of spectrum. Classification of spectroscopic methods. Molecular spectroscopy, UV-VIS. Analytical applications of fluorescence and phosphorescence. Lambert-Beer law. Construction of spectrometers, detectors, monochromators. Applications of spectrophotometry. General overview and importance of chromatographic parameters. Description of the most important types of HPLC detectors, their structure, operating principle, and scope of use. refractive index (RI) detector, UV-Vis spectrophotometric detector, diode array (DAD) detector, fluorescence detector, mass spectrometry detector (MSD), evaporative light scattering detector (ELSD), electrochemical detector, conductivity detector. Comparison of analytical and preparative HPLC separations.

13th week:

Lecture: Atomic spectroscopic methods. Atomic spectrum, spectral lines. Atomization, ionization. Construction of the atomic spectrometers. Sample introduction. Flame atomic absorption spectrometry (FAAS), graphite furnace AAS. ICP, ICP-MS Interferences in atomic spectrometry. Speciation analysis. Low pressure column chromatography procedures. Traditional column chromatography, dry column chromatography, flash chromatography, affinity chromatography. Commonly used chromatographic columns and devices, theory and practice of low-pressure gel chromatography, molecular weight determination. Additional chromatographic devices. High pressure gel permeation chromatography analytical methods, determination of molecular weights and polydispersity in the case of polymers.

14th week:

Lecture: Fundamentals of electrochemistry.

Analytical applications of the interaction between electric current and matter. Potentiometry, Electrodes. Direct and indirect potentiometry and conductometry.

Gel electrophoresis. Theory and practice of gel electrophoresis Migration of ions under the influence of an electric field. Practice of gel

preparation, properties of gel materials, preparation of gels, cross-linking. The most typical representative of gel materials: the properties of agarose and polyacrylamide gels, the range of compounds that can be separated on them. DNA and protein analyses, implementation of SDS-PAGE. sample application, running, staining, blotting, detection, evaluation, computer programs.

Subject: **PHARMACEUTICAL BIOCHEMISTRY I.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **26**

Practical: **4**

1st week:

Lecture: Order of the academic year, requirements, exam, resources. Introduction to biochemistry. The role of water in life. Molecular dimensions of life. Secondary interactions, high-energy compounds. Carbohydrates, glyco conjugates, lipids. Biological membranes. Main groups of membrane lipids. Membrane models, types of membrane transport, their importance in metabolism.

2nd week:

Lecture: Protein structure and function, primary, secondary and tertiary structure. Enzymes as biocatalysts. Enzyme function in general.

Enzyme structure, cofactors, coenzymes. Classification of enzyme reactions. Regulation of enzyme activity.

3rd week:

Lecture: Enzyme kinetics. Introduction and definitions. Meaning and definition of K_M and v . Enzyme activation and inhibition. Kinetic interpretation of types of inhibition. Enzyme applications, laboratory diagnostic significance of some enzymes. Discussion of a practical exercise.

4th week:

Lecture: Energy production pathways in living cells: the biochemical anatomy of the mitochondrion. Structure and function of the pyruvate dehydrogenase complex, formation of acetyl-CoA. Energy production and regulated steps of the citrate cycle. Anaplerotic reactions and their significance. Components and function of the electron transport chain. The relationship between electron transport and ATP synthesis. Oxidative phosphorylation. The ATP synthetase enzyme and the mechanism of ATP synthesis.

5th week:

Lecture: Carbohydrate metabolism. Digestion and absorption of dietary carbohydrates. Types and function of glucose transporters. Glycolysis. Fate of pyruvate. Transport of NADH into mitochondria: glycerophosphate shuttle, malate-aspartate shuttle. Entry of fructose and galactose into glycolysis

6th week:

Lecture: Gluconeogenesis. The Cori cycle and the glucose-alanine cycle. Glycogen metabolism. Regulation of glycogen synthesis and degradation. Specific pathways of carbohydrate breakdown: the pentose phosphate

cycle and its significance. Polysaccharide degradation. Medical aspects of carbohydrate metabolism.

7th week:

Lecture: Lipid metabolism, digestion of fats. Mobilization of fat stores: lipogenesis. Metabolism of fatty acids: oxidation of fatty acids, energy balance of degradation. Formation and utilization of ketone bodies

8th week:

Lecture: Localization of fatty acid synthesis, enzymes, conditions of synthesis. Synthesis of unsaturated fatty acids, possibilities of chain extension. Fatty acid metabolism and the citrate cycle. Relationship with carbohydrate metabolism.

9th week:

Lecture: Biosynthesis of triacylglycerols and phospholipids. Biosynthesis of cholesterol. Clinical aspects of lipid metabolism. Obesity.

10th week:

Lecture: Protein metabolism, enzymes of protein digestion and breakdown, their regulation. Amino acid metabolism. The central role of aminotransferases and glutamate dehydrogenase in nitrogen metabolism. Pathways of amino acid degradation. The urea cycle and its relationship to the citrate cycle.

11th week:

Lecture: The fate of the amino acid carbon skeleton. Essential and non-essential amino acids, starting compounds for the synthesis of amino acids, main reactions. Relationship with carbohydrate metabolism and the citrate cycle. Inherited enzyme defects in amino acid metabolism.

12th week:

Lecture: Nucleic acid metabolism. Biosynthesis of purine and pyrimidine nucleotides. Degradation of purine and pyrimidine nucleotides. Degradation and synthesis of nucleic acids. Diseases of nucleotide metabolism.

13th week:

Lecture: Biochemistry of vitamins. Water soluble and fat soluble vitamins, vitamin deficiencies. Biochemistry of one-carbon (C1) units: trans-methylation, trans-sulphuration, folic acid transport, folate trap.

14th week:

Lecture: Measuring parameters of enzyme activity. Solving individual problems using enzyme kinetics simulation software. Summary.

Reading materials:

Berg J.M., Tymoczko, J. L., Stryer, L.: Biochemistry. 7th edition. W. H. Freeman, 2010. ISBN: 1-4292-2936-5.
C.K. Mathews, K.E van Holde, K..G. Ahern: Biochemistry. 3. ed. Addison Wesley Longman, 2000. ISBN: 0-8053-3066-6.
Lehninger Albert L, Nelson David L: Principles of biochemistry. 3. ed. Worth, 2000. ISBN: 1572591536.

Requirements

Requirements for signing the semester:

Students must fulfil the practice and attend the lectures. There is one practice, which is obligatory for every student.

The final exams are oral or written exams. In case of written exams, students have to take e-exams that take place at the Kassai Street Campus of the University of Debrecen (TEOK107 – e-exam lecture hall; [https://unideb.hu/hu/elerhetosegek/?poi\[860\]](https://unideb.hu/hu/elerhetosegek/?poi[860])).

If a student fails the „C” written exam, the faculty provides a chance for an oral exam in front of an examination committee. There are no exam questions, student can be asked from any part of the lectures. If the student passes the oral “C” exam, he/she will be given a grade 2 (pass).

Improvement exam: Students who wish to improve their grades can take one improvement exam during the exam period. In case of the improvement exam we will count the better grade.

Please follow the announcements of the Faculty of Pharmacy via the e-learning page (login with your university network ID and password).

Department of Organic Chemistry

Subject: **ORGANIC CHEMISTRY PRACTICE II.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Practical: **42**

1st week:

Practical: Receiving of laboratory equipments.
Safety educations. Repetition: crystallization from water, filtration, TLC, determination of melting point.

2nd week:

Practical: Repetition: distillation of acetone from KMnO₄ and vacuum distillation of water.
Separation of benzoic acid and benzanilide by liquid-liquid extraction.

Self Control Test (Short written test from the safety rules and laboratory equipments.)

3rd week:

Practical: Identification of hydroxyl derivatives of hydrocarbons. Test tubes reaction.
Identification of unknown compounds.

Self Control Test (Short written test: purification and identification of solid compounds and distillation methods.)

4th week:

Practical: Preparation of benzotriazole and 3-nitroaniline.

Self Control Test (Short written test:

chemistry of hydroxy derivatives of hydrocarbons: alcohols; phenols.)

5th week:

Practical: Identification of amino derivatives of hydrocarbons. Identification of unknown compounds

Self Control Test (Short written test: preparation and chemistry of diazonium salts.)

6th week:

Practical: Identification of oxo derivatives of hydrocarbons. Identification of unknown compounds. Preparation of cyclohexanone-2,4-dinitrophenylhydrazone.

Self Control Test (Short written test: Preparation and chemistry of amines.)

7th week:

Practical: Preparation of benzamide and benzoic acid.

Self Control Test (Short written test: Preparation and chemistry of aldehydes and ketones.)

8th week:

Practical: Synthesis and separation of 4-chlorobenzoic acid and 4-chlorobenzyl alcohol. TLC, determination of melting point.

Self Control Test (Short written test: Synthesis and chemistry of carboxylic acid derivatives.)

9th week:

Practical: Preparation of 2,3-diphenyl-quinoxaline and 2,6-dibenzylidene-cyklohexanone. TLC, determination of melting point.

10th week:

Practical: Isolation and saponification of the glyceride of nutmeg. TLC, determination of melting point.

11th week:

Practical: Complex practical test: Identification of unknown compounds with test tube reactions.

12th week:

Practical: Preparation of O-Acetyl-salicylic acid
Self Control Test (Final written test.)

13th week:

Practical: Isolation of anethole from anise with steam distillation. Synthesis of p-anisic acid.

14th week:

Practical: Filling of laboratory notes. Cleaning of the laboratory glasswares. Deposit of the laboratory equipments. Assessment of laboratory practice.

Requirements

Compulsory literature: The hand-out provided by the leader of the laboratory practice.

Suggested Reading: The hand-out of the lecture of organic chemistry II as well as its compulsory and suggested literature.

Conditions on signing the lecture book: The laboratory work is evaluated by a five-level practical grade.

Subject: **ORGANIC CHEMISTRY THEORY II.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **56**

1st week:

Lecture: Classification and characterization of hydroxyl derivatives of hydrocarbons (alcohols, phenols) and their thio analogues. Interpretation of their physical properties derived from their bonding system. The acid-base properties of alcohols, phenols and thio analogues. Preparation of alcohols, ethers, phenols and thio analogues.

2nd week:

Lecture: Alcohols and phenols as nucleophiles: alkylation, acylation, formation of sulphonate and inorganic esters; acid catalyzed transformations of alcohols (conversion of alcohols to

halogenated derivatives, elimination reactions).

Oxidation of alcohols and phenols. The characterization of ethers; synthesis and cleavage of ethers. Characterization of the special ether derivatives: epoxides, semi-acetals, acetals and enolethers. Cumene-based phenol synthesis.

3rd week:

Lecture: Overview of the organic compounds possessing C-N single bond. Classification of amines and characterization of their bonding systems. Interpretation of their physical derived from their bonding system. Synthesis of aliphatic and aromatic amines; industrial methods. Review

and interpretation of basicity of amines.
Chemical transformation of amines: alkylation, acylation of amino group. Synthesis of sulfonamide and reaction with nitric acid.
Oxidation of the amines. SEAr reactions of anilines.

4th week:

Lecture: Characterization of nitro compounds: the bonding system, interpretation of electron-withdrawing effect and C-H acidity. Synthesis of nitro compounds. Preparation of diazonium salts, reactions of diazonium salts and their practical significance. Azo compounds and their industrial significance.

5th week:

Lecture: Classification and characterization of oxo compounds: the bonding system and stability of carbonyl group. Physical properties of oxo compounds. Acid-base properties of aldehydes and ketones: acidity of α -hydrogen, keto-enol tautomerism. Synthesis of aldehydes and ketones.

6th week:

Lecture: Reactions of aldehydes and ketones. Nucleophilic addition with O-, S-, N- and C-nucleophiles, the reversibility of the additions. Condensation reactions. Oxidation and reduction. Reactions on α -carbon; aldol dimerization, α -halogenation. Nucleophilic addition reactions of α,β -unsaturated oxo compounds.

7th week:

Lecture: Classification of carboxylic acids and their derivatives, description and comparison of their bonding systems. Stability and reactivity of the carboxylic acid derivatives. Physical properties and synthesis of carboxylic acids.

8th week:

Lecture: Review and interpretation of the acid-base properties of carboxylic acids and their derivatives (O-H, N-H and C-H acidity). Interconversion of the carboxylic acid derivatives, acyl nucleophilic substitution.

Reductive transformations of carboxylic acid derivatives, transformation of their carbon skeleton.

9th week:

Lecture: β -Dicarbonyl and α,β -oxo-carboxylic acid derivatives, C-H acidity and basic of enolate chemistry: formation of carbon-carbon bond, malonic ester, acetoacetic ester and cyanoacetic ester syntheses. Substituted (halogenated, hydroxy and oxo) carboxylic acid derivatives and their interconversion. Synthesis and interconversion of carbonic acid derivatives and their major representatives. Practical significance of carbonic acid derivatives.

10th week:

Lecture: Structure, synthesis and chemical properties of amino acids. Characterization of α -amino acids which are forming protein/peptides. Structure and determinations of peptides. Determination of amino acid sequence by chemical and enzymatic methods, possibility of automation. Synthesis of peptides. The basic protecting groups and activation methods for peptide synthesis. Solid phase synthesis, automation. The occurrence, classification and functions of proteins. Levels of protein structure: primary, secondary, tertiary and quaternary structures, structure formation. Structure and function relationship.

11th week:

Lecture: Classification, structure and nomenclature of carbohydrates. Basic configuration and conformational conditions of monosaccharides. Most important chemical properties of monosaccharides: mutarotation, transformation of oxo group and hydroxyl groups, synthesis of glycosides. Most important representatives of di- and oligosaccharides (sucrose, maltose, cellobiose, lactose, cyclodextrins), factors determining their structure. Synthesis of di- and oligosaccharides, basic protecting groups and activation methods.

12th week:

Lecture: Structure of heterocyclic compounds. Three-, four-, and five-membered heterocycles containing one heteroatom. β -lactam antibiotics. Porphyrins. Five-membered ring systems with two or more heteroatoms. Six-membered ring systems containing one heteroatom.

13th week:

Lecture: Characterization and significance of six-membered heterocycles with multiple heteroatoms. The significance and types of

alkaloids, flavonoids and vitamins.

14th week:

Lecture: Classification and characterization of nucleic acids, their building blocks. Synthesis of nucleosides and nucleotides. Primary, secondary and tertiary structure and biological function of DNA and RNA. The genetic code. Information content of the nucleotide, amino acid and carbohydrate code and their correlation. Nucleotide coenzymes.

Requirements

Terminal examination, comprehensive examination.

Requirement level: Sufficient level of acquisition of the knowledge given in the lecture.

Prerequisite for applying for the exam: Obtaining a signature, for which the lectures are min. 30% must attend. This is checked electronically via the eLearning system.

Department of Pharmaceutical Technology

Subject: **PHARMACEUTICAL TECHNOLOGY THEORY I.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture:

Pharmaceutical Technology and the task of Pharmaceutical technology.

Definition of drug and dosing. Prescription.

The connection between biopharmacy and pharmaceutical technology.

Basic principles of pharmacokinetics.

The connection between pharmaceutical preparation and drug effect.

2nd week:

Lecture: Materials, materials knowledge, (small and medium scale). Instruments. Pharmaceutical metrology.

3rd week:

Lecture:

Pharmaceutical operations: Introduction. Basic

operation concepts. Water purification methods.

4th week:

Lecture:

The thermodynamics of dissolution, solubility, diffusion, dissolution rate. Possibilities for increasing solubility. Colligative properties.

5th week:

Lecture:

Di- and polyphasic systems. Interfacial occurrence: interface, interfacial tension. Wetting angle. Disperse polyphasic systems, viscosity of disperse polyphasic systems, sedimentation and flocculation, electrostatic occurrence, coagulation

6th week:

Lecture:

Colloidal systems. Molecular colloids.

Associative colloids (thermotropic, lyotropic

associative colloids).

7th week:

Lecture:

Physical and chemical theoretical bases of drug formulation. Monophasic-systems. Mechanical properties of liquids, viscosity, bases of rheology. Determination of viscosity.

8th week:

Lecture:

Aseptic formulation of drug. "Clear surface". Microbiological purity of dosage forms. Principles for aseptic formulation. Disinfections. Preservation.

9th week:

Lecture:

Sterilization. Theoretical bases of sterilization. Methods of sterilization. Methods of physical sterilization. (heat sterilization, sterilization with radiation, sterilization with ultrasound.)

10th week:

Lecture:

Filtration. Theoretical bases of filtration,

equipment. Types of filters.

11th week:

Lecture:

Drying. Theoretical bases of drying. Methods of drying. Heating transfer at room temperature. Fluidization. Lyophilization.

12th week:

Lecture:

Mixing. Quality of mixing. Duration of mixing. Instruments for mixing. Homogeneity.

13th week:

Lecture:

Pharmaceutical dosage forms formulated by extraction. Basic requirements of extraction. Factors influenced by extraction. Methods of extraction. (Maceration, turbo-extraction, hydro-extraction, perfusion extraction, extraction with reverse flow.) Extracts, tinctures. Decoctions, Infusions. Tea-mixtures.

14th week:

Lecture: Consultation.

Requirements

Students have to attend 30% of the lectures.

Requirements for signing the Lecture book: The Department may refuse to sign the subject if the student didn't attend 30% of lectures according to attendance list.

At the end of semester students have oral exam. The prerequisite of oral exam is a written test before exam. If student doesn't write more than 60% and fail the written test, it is prohibited to take an oral exam and get a fail (1) mark.

Department of Physical Chemistry

Subject: **COLLOID AND SURFACE CHEMISTRY PRACTICE**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Practical: **28**

8th week:

Practical: 1. Rheological characterization of concentrated emulsions (creams).

9th week:

Practical: 2. Measurement of surface tension of solutions by Du Nouy tensiometer.

10th week:

Practical: 3. Polymer's relative molecular masses from viscosity measurements.

11th week:

Practical: 4. Adsorption from solution.

12th week:

Practical: 5. Solubilization.

13th week:

Practical: 6. Determination of size distribution of a sedimenting suspension.

14th week:

Practical: 7. Experiments on thixotropic or other anomalous fluids with a rotation viscometer

Requirements

Attendance on all practice is compulsory. Preparation of lab notebooks is necessary to get the signature. More detailed instructions will be given on the first lab course.

Subject: **PHYSICAL CHEMISTRY PRACTICE**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Practical: **28**

1st week: General Information and Safety training

2nd week:

Practical: One of the following topics: Measuring the concentration of a colored solute by spectrophotometry or Determination of thermodynamic quantities

3rd week:

Practical: One of the following topics: Measuring electrical conductivity of solutions or Measuring densities by pycnometer

4th week:

Practical: One of the following topics: Measuring electromotive force, Investigation the validity of the Nernst equation or Determination of activity

coefficient for concentration galvanic cell

5th week:

Practical: One of the following topics: Distillation or Determination of enthalpy of dissolution

6th week:

Practical: One of the following topics: Determination of colligative phenomena or Gas volumetry

7th week:

Practical: One of the following topics: Kinetic measurements: Mutarotation of glucose measured by polarimetry or Hydrolysis of esters or Initial rates and activation energy of the iodine clock

Requirements

The measurements and knowledge of the associated theory are graded and an overall mark will be

given.

Safety training is mandatory before the first lab practice.

Everybody should work and do the measurement individually according to the pre-set schedule (it will be provided prior to the first lab). The laboratory practices are 4-hrs long. In accordance with the regulations of University of Debrecen, attendance is compulsory with the exception of health or family problems. In this case, the students should agree with the teacher on replacement dates for the missed experiments.

Department of Physiology

Subject: **HUMAN PHYSIOLOGY I.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **42**

Seminar: **14**

1st week:

Lecture: Introduction

Basic receptor function

Passive and active transport

2nd week:

Lecture: Resting membrane potential

Ion channels

3rd week:

Lecture: The mechanism of action potential

Physiology of synapse and neuromuscular junction

Skeletal muscle

4th week:

Lecture: Smooth muscle

Cardiac action potential

ECG

5th week:

Lecture: Contractile properties of the heart

The cardiac output and the cardiac cycle

Autoregulation of cardiac output

Self Control Test

6th week:

Lecture: Neuroendocrine control of cardiac

functions, Cardiac work and energetics

General properties of circulation

Arterial circulation

7th week:

Lecture: Microcirculation, venous circulation

Cardiovascular reflexes

Humoral control of cardiovascular function

8th week:

Lecture: Nervous control of cardiovascular function

Circulation of special areas: Brain, Heart, Splanchnic area, skin and skeletal muscle

9th week:

Lecture: Cardiovascular Shock

Physiology of the body fluids

Red blood cells, Blood types

10th week:

Lecture: Iron circulation; Jaundice

Self Control Test

11th week:

Lecture: Hemostasis

Mechanics of respiration, compliance, work of

breathing

Gas transport in the blood

12th week:

Lecture: Central control of breathing

Neural and hormonal control of the GI tract

Motor functions of the gastrointestinal tract

13th week:

Lecture: Secretion of saliva and gastric juice

Exocrine functions of the pancreas and liver

Absorption of nutrients

14th week:

Self Control Test

Requirements

1. Signature of the Semester

Attendance of the lectures and seminars are compulsory. The signature of the semester may be refused if one has more than four absences from the seminars. Students must attend on seminars with the group specified by the Registrar's Office. The program of the Human Physiology I lectures is listed at the e-learning web site of the Department of Physiology. For continuous updates on all education-related matters, please check the elearning.med.unideb.hu web site (Department of Physiology menu item).

2. Evaluation during the semester (mid-semester tests)

The progress of students will be tested three times during the semester in the form of a written test (multiple choice questions). Participation on mid-semester written tests is compulsory.

3. Examination

The first semester is closed by an oral end-semester exam (ESE) covering the topics of all lectures and seminars. The list of oral exam questions is available on the elearning.med.unideb.hu web site (Department of Physiology menu item). Students may be exempted for ESE if the average score of the three mid-semester tests is higher than 60%, and (s)he has fewer than 4 - 4 lecture and seminar absences. If all these conditions are met, the offered mark will be calculated according to the following table:

Score	Mark
60 – 69.9%	pass (2)
70 – 79.9	satisfactory (3)
80 – 89.9 %	good (4)
90 – 100%	excellent (5)

The student can refuse to accept the offered mark based on the results of mid-semester tests and choose to take ESE.

If one wishes to improve his/her former Physiology exam mark, it is possible to take improvement exam. Note that the mark of improvement exam depends on the actual actual performance, even if it is worse than the previous result!

Division of Pharmacognosy

Subject: **PHARMACOGNOSY THEORY I.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **28**

Seminar: **28**

1st week:

Lecture: The origins of pharmacognosy. The nomenclature of plant drugs; Sources of drugs, Production of drugs; Basic metabolic pathways, Origin of primary and secondary metabolites. The biosynthetic pathways.

2nd week:

Lecture: Basic principles in phytochemistry, plant biochemical pathways, primary and secondary metabolism, classification of secondary metabolites. Chemistry of secondary metabolites.

3rd week:

Lecture: Nature as a source of medicine, sources of bioactive natural products. Natural products as lead compounds. Plant tissue cultures, biotechnology, bioprospecting, search for new bioactive natural products. Gathering and cultivation of herbal material. Industrial crops as medicinal plants. Possible roles of phytotherapy in evidence-based medicine.

4th week:

Lecture: Quality assurance of medicinal plants and products. Identification by macro-, and micromorphology. Detection of adulterants and contaminants in medicinal plant products. Pharmaceutical quality: impurities, pesticide residuals, heavy metals, microbiological contamination. Phytochemistry in quality assurance: methods of analysis, threshold values.

5th week:

Lecture: Carbohydrate containing drugs. Amylums, gums.

6th week:

Lecture: Organic acids: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy. Fixed oils, waxes, fats: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

7th week:

Lecture: Amino acids, proteins, peptides and enzymes: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy. Isoprenoids in general. Essential oils: production, biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

8th week:

Lecture: Monoterpenes and derivatives: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

9th week:

Lecture: Oxidized monoterpenes: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

10th week:

Lecture: Sesquiterpenes and derivatives: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

11th week:

Lecture: Diterpenes (resins and balsams), triterpene derivatives: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy. Saponins.

12th week:

Lecture: Steroids and steroid saponins, furostanol and spirostanol derivatives: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

13th week:

Lecture: Cardenolid glycosides and

miscellaneous terpenoids: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

14th week:

Lecture: Consultation.

Requirements

Detailed information is given in the first lecture and via the e-learning system.

Completion of the lecture requires:

- examination during the exam period based on the uploaded lectures (in person, or, on video platform face-to-face, depending on the situation).
- we offer an optional pre-examination test for offered grade, before the exam period (in person, or, on e-learning platform, depending on the situation).

Department of Foreign Languages

Subject: **HUNGARIAN LANGUAGE II/2.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Emlékszel?

2nd week:

Practical: Testrészek

3rd week:

Practical: Tünetek

4th week:

Practical: Gyógyszerek

5th week:

Practical: Jó és rossz szokások I.

6th week:

Practical: Jó és rossz szokások II.

7th week:

Practical: Mid-term test (written)

Self Control Test

8th week:

Practical: Klinikák és szakorvosok

9th week:

Practical: Utasítások

10th week:

Practical: Tessék mondani! I.

11th week:

Practical: Tessék mondani! II.

12th week:

Practical: Anamnézis, Összefoglalás

13th week:

Practical: Összefoglalás, End-term test (written)

Self Control Test

14th week:

Practical: End-term test (oral)

Self Control Test

Requirements

Attendance

Attendance at language classes is compulsory. If a student is late, it is considered an absence. Students may miss no more than 10% of classes, which means a maximum of two occasions. Making up missed classes by attending another group is not allowed. Medical notes are not accepted.

The teacher evaluates active participation in each class. Students are not allowed to share coursebooks during classes; therefore, if a student fails to bring the coursebook for the second time, attendance for that class is not granted.

Testing and Evaluation

During the course, students must take two written language tests and one oral exam. If a student is late for a test, they are not allowed to take it. If a student misses the mid-term test with approval from the Head of the Department, they may take it in Week 13.

Schedule for the tests:

- Week 7: mid-term written test
- Week 13: end-term written test
- Week 14: end-term oral test

During written and oral examinations (mid-term and end-term exams), students are not allowed to bring any devices suitable for communication or data storage (e.g. electronic devices) into the examination venue. If the supervisor detects the presence of such a device, the examination will be suspended and disciplinary proceedings will be initiated in writing to the Dean.

A further minimum requirement is knowledge of approximately 200 words per semester, assessed through 10 vocabulary quizzes. Five quizzes are held before and five after the mid-term test. If a student fails or misses any vocabulary quiz, they are not allowed to start the written test and must take a vocabulary exam covering all 100 words from the relevant period (before the mid-term or end-term test).

Missed word quizzes cannot be made up for on the day of the test.

A vocabulary quiz may be postponed by one week only and must be taken with the student's own teacher. Students may earn bonus points (5% + 5%) by completing two extra quizzes, each consisting of 20 sentences, before the mid-term and end-term tests. The sentences are taken from the units of the course book.

The oral exam consists of a role-play based on a list of situations covered in the course book. If a student fails the oral exam, they fail the entire course. The results of the written tests and the oral exam are combined and averaged.

Grading

Grades are awarded based on the final score as follows:

Final score	Grade
0–59%	Fail (1)
60–69%	Pass (2)
70–79%	Satisfactory (3)

80–89%	Good (4)
90–100%	Excellent (5)

If the average score of the written tests is below 60%, the student is allowed one remedial written exam covering the failed material. The remedial exam must be completed before the end of Week 14. Failure to attend the remedial exam results in a score of 0% for that test. The oral exam may only be taken if the written tests have been passed.

Coursebook: Fodor, Marianna – Rozman, Katalin: Beszélek magyarul?! II.

Department of Inorganic and Analytical Chemistry

Subject: **ANALYTICAL CHEMISTRY FINAL EXAM**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **14**

Requirements

In the oral exam two topics are randomly selected, one from the first (1-12) and the other from the second (13-26) part of the list. During preparation one topic (of your choice) needs to be written in detail while the other will be the subject of an oral exam. The final mark will be determined by the results of the two topics.

Subject closing topic list for pharmacy students

1. Chemical reactions in qualitative analysis. Selective, specific and group reactions. Identification tests, purity tests, content analysis. Ways of reporting the sensitivity of test reactions. Masking.
2. Quantitative description of acid-base equilibria. The Brönsted equation and its use.
3. Complex formation equilibria, apparent stability constants.
4. Precipitation equilibria. Factors influencing the solubility of precipitates.
5. Redox equilibria and redox titration curves.
6. Titration curves and their significant points: equivalent volume, end point, titration errors. Chemical end point detection in titrimetric analysis. Chemical requirements for reagents and standard solutions in titrimetric analysis.
7. Practice of acid-base titrations, possibilities of application.
8. Theoretical background and practice of complexometric titrations. The chelate effect.
9. Permanganometry.
10. Bromatometry and iodometry.
11. Analytical applications of precipitation reactions. Argentometric titration curves. Practice of argentometry.
12. Gravimetry (theoretical background, practical steps, examples).
13. Background of separation methods based on extraction. pH dependence of solute partitioning processes. Determination of metal ions by extraction. Distillation.
14. Statistical evaluation of the experimental data. Experimental errors. S/N. Statistical tests. Evaluation of the experimental results (types and possible errors of the calibration). Analytical performance parameters.

15. Sampling and sample pretreatment methods used in analytical chemistry.
16. Theoretical basis of the formation of molecular and atomic spectra. Main application fields of the spectroscopic methods.
17. Construction of the UV-Vis spectrometers (constructions, main parts, principles).
18. The practice of UV-Vis spectroscopy (analytical procedures, application areas, basic law).
19. Theoretical basis of atomic spectroscopy. Main methods and applications of atomic spectroscopy.
20. Potentiometry and its application in analytical chemistry.
21. Conductometry and its application in analytical chemistry.
22. Theoretical basis of chromatography (types, principles, instrumentation (injection, separation, detection), band spreading, separation efficiency, evaluation of chromatograms).
23. Construction and operation of gas chromatographic instruments.
24. Construction and operation of HPLC instruments.
25. Other chromatographic methods (affinity chromatography, gel chromatography).
26. Electrophoresis.

Subject: **BASICS OF INSTRUMENTAL ANALYTICS**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Seminar: **14**

Practical: **28**

1st week:

Practical: Thin layer chromatography

2nd week:

Practical: Conductometry

3rd week:

Practical: Atomic spectroscopy

4th week:

Practical: pH-metry

5th week:

Practical: Gelelectrophoresis

6th week:

Practical: Size exclusion chromatography

7th week:

Practical: UV-VIS spectrophotometry

Requirements

The instrumental analysis part will introduce the student to the practice of atomic and molecular spectroscopy, and different electrochemical methods.

Attendance is compulsory at all of the sessions of the laboratory practice. All practice sessions involved short oral or written tests in order to make sure that student come to the lab fully prepared.

-the average grade of instrumental analysis lab sessions (an average of them at least 2.0 is necessary to avoid a "fail" final grade).

Subject: **QUANTITATIVE ANALYTICAL CHEMISTRY PRACTICE**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Introduction to the Quantitative

Analytical Chemistry Laboratory.

Laboratory Safety Information.

Review of lab equipment.

2nd week:

Practical: Preparation of ~0.1 M HCl titrant (250 ml).

Determination of the exact concentration of the HCl titrant solution using potassium hydrogen carbonate stock solution.

Determination of HgO in a HgO-KCl mixture (unknown sample).

3rd week:

Practical: Preparation of ~0.1 M NaOH titrant by the Sørensen (500 ml) and determination of its exact concentration.

Determination of oxalic acid (unknown sample).

Simultaneous determination of sulfuric acid and boric acid in a mixture (unknown sample).

Preparation of 0.02 M potassium permanganate titrant (250 ml).

4th week:

Practical: Preparation of 0.05 M sodium oxalate stock solution (100.00 ml).

Determination of the exact concentration of the potassium permanganate titrant solution using sodium oxalate stock solution.

Determination of ferrous oxalate by

permanganometric titration (unknown sample).
Determination of hydrogen peroxide (unknown sample).

5th week:

Practical: Preparation of 0.02 M sodium thiosulfate titrant (250 ml) and determination of its exact concentration using 0.003 M potassium iodate stock solution.

Determination of copper(II) (unknown sample).
Determination of iodide ion (unknown sample).

6th week:

Practical: Preparation of 0.02 M potassium bromate titrant (250.00 ml).

Determination of ascorbic acid active ingredient content of vitamin C tablet (unknown sample).

Determination of the composition of KCl-KBr mixture using 0.05 M silver nitrate stock solution (unknown sample).

7th week:

Practical: Preparation of 0.01 M Na₂EDTA titrant solution (250.00 ml). Simultaneous determination of calcium(II) and magnesium(II) ions (unknown sample).

Determination of Al(III) (unknown sample).

Lab equipment return.

Requirements

The classical quantitative analysis part involved acid-base, redox, argentometric and complexometric titrations as well as two gravimetric procedures.

Attendance is compulsory at all of the sessions of the laboratory practice. All practice sessions involved short oral or written tests in order to make sure that student come to the lab fully prepared.

Grading is based on two separate factors:

-the average grade of short test written at the beginning of the classical quantitative analysis lab sessions (an average grade of them at least 2.0 is necessary to avoid a "fail" grade),

-the average grade of unknown samples at the classical quantitative analysis lab sessions (an average of them at least 2.0 is necessary to avoid a "fail" final grade),

Department of Pharmaceutical Chemistry

Subject: **PHARMACEUTICAL CHEMISTRY PRACTICE I.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Lab safety instructions, requirements.

2nd week:

Practical: Analytical exercises of selected inorganic compounds according to the Pharmacopeia.

3rd week:

Practical: Analytical exercises of selected inorganic compounds according to the Pharmacopeia.

4th week:

Practical: Analysis of alcohols, citric acid, urea.

5th week:

Practical: Benzoic acid, resorcinol, thymol, methenamine.

6th week:

Practical: Vitamines.

7th week:

Practical: Pain killers

Requirements

Laboratory practices are grouped into quaterly blocks. Attendance at the laboratory practices is obligatory. If a student is absent from more than one practice for any reason (including cases where the student was not permitted to start the practice), the semester will not be accepted. There is no possibility to arrange additional or make-up laboratory practices.

The semester of the student's lab practice will not be accepted in either of the following cases:

1. Four unacceptable written tests/demos with the evaluation "Failed" (Mark 1), or three unacceptable written tests/demos with the evaluation "Failed" (Mark 1) along with a certified absence,
2. The student was not permitted to start the Lab Practice in two occasions*,
3. Two missed labs for any reason (illness or unsuccessful lab practice with Mark "0"),
4. The student presented two unacceptable Lab Practice written tests/demos with the evaluation "Failed" (Mark 1), and was not permitted to start the Lab Practice in one occasion*,
5. Five demos or lab notebooks with the evaluation "Failed" (Mark 1) or "Zero" altogether in any combination,
6. The final average (the average of the demos and the notebooks) is below 2.0.

The student will not be permitted to start a Lab Practice in either of the following cases:

1. The student does not show up in the laboratory in 20 minutes from the scheduled starting date of the Practice,
2. The student cannot present her/his Lab Practice Notebook prepared according to the said requirements,
3. The student is unable to reach at least 6.0 points (50%) of the maximum score (12.0 points) related to the questions asked in connection with the topics of the Laboratory Practice!
4. When writing the test, cabs and other illegal sources are not allowed to use. If the student is found out in a cheating, the student must leave the Lab, and the Practice will be considered unsuccessful (Mark "0").

Detailed requirements will be provided in the first lab practice.

Subject: **PHARMACEUTICAL CHEMISTRY THEORY I.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **42**

1st week:

Lecture: Topics and history of pharmaceutical chemistry. Pharmacopeia, as the standard of quality control. Physical and chemical investigations. Methods for the identification and control of medicinal substances. Nomenclature of the medicinal substances.

Practical: Short introductory practice.

2nd week:

Lecture: Pharmacologically important inorganic compounds.

Practical: Analytical exercises of selected inorganic compounds according to Pharmacopeia.

3rd week:

Lecture: General anesthetics: inhalation anesthetics, barbitol and non-barbitol-type narcotics. Anesthetics with pregnane skeleton. Sedatives and hypnotics: alcohols, aldehydes, urethanes, barbiturates and with 4-quinazolone, bezodiazepine and piperidine skeleton.

Practical: Alcohols, solvents. Barbituric acid derivatives.

4th week:

Lecture: Antiepileptic agents (anticonvulsants):

compounds with barbiturate, hydantoin, oxazolidin-dione, succinimide and acylurea structure.

Practical: Aminophenazon derivatives, urethan, phenytoin.

5th week:

Lecture: Narcotic Analgetics: codeine, morphine, thebaine derivatives Morphinane, bezomorphane, phenylpiperidine and metadone derivatives. Non-diphenylmethane -type amines. Another major analgetics. Competitive antagonists of morphine and morphine derivatives.

Practical: Selected aromatic compounds: resorcinol, thymol, acetylsalicylic acid etc.

6th week:

Lecture: Analgetic antipyretics: derivatives of salicylic acid, aniline, and anthranilic acid. Pyrazolone- and arylacetic acid-type analgetics.

Practical: Phenothiazin derivatives; methenamine.

7th week:

Lecture: Analgetic antipyretics: steroid anti-inflammatory agents. Antihistamines.

Practical: Carbohydrates, ascorbic acid, citric acid.

8th week:

Lecture: Psychopharmacones: anxiolytics (minor tranquilizers): carbamates, benzodiazepines, and diphenylmethane-type compounds. Another anxiolytics.

9th week:

Lecture: Antipsychotics, neuroleptics (major tranquilizers): Reserpine. Derivatives of phenothiazine and butyrophenone. Diphenylbutyl piperidines.

10th week:

Lecture: Antiparkinson agents: piperidylphenyl propanols, diphenyl-methanes, phenothiazines, thioxanthenes.

11th week:

Lecture: Psychostimulants: Analeptics. Phenylethyl amine, piperidine, morpholine and oxazoline derivatives. Anorectic agents. Psychoenergetic agents: monoamin-oxidase (MAO) inhibitory compounds, tricyclic antidepressants. Psychomimetics: LSD,

psilocibine, mescaline, tetrahydrocannabinol.

12th week:

Lecture: Central and peripheral antitussive agents. Expectorants. Bronchodilators. Medicines effective on the nasal and other mucosa, and on the respiratory system.

13th week:

Lecture: Central Muscle relaxants: ethers of glycerol and derivatives of 1,3-propanediol. Peripheral muscle relaxants: substances with membrane-stabilizing and depolarizing effects.

14th week:

Lecture: Parasympathomimetics: acetylcholin and the direct parasympathomimetics. Nitrogen-containing, and organophosphoric ester-type cholinesterase inhibitors (paralysers). Insecticides. Cholinesterase-reactivating antidote. Parasympatholytics; alkaloids with tropane skeleton. Synthetic tropane derivatives. Another parasympatholytics without tropane skeleton.

Requirements

Prerequisite: Organic Chemistry successful comprehensive examination.

Lectures: Attendance to lectures is emphatically recommended. All material covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Several new concepts and ideas are discussed in the lectures only and are not present in the textbook.

Prerequisite for the examination: a successfully finished Pharmaceutical Chemistry Practice I.

Department of Pharmaceutical Technology

Subject: **PHARMACEUTICAL BIOCHEMISTRY II.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **44**

Practical: **5**

1st week:

Lecture: Biochemistry of signaling I (3 hrs)

The concept and levels of regulation. Receptors and signaling systems. Ion channel type

receptors. Seven transmembrane type receptors. G proteins and GTPases. The adenylate cyclase system, the phospholipase C signaling pathway. Guanylate cyclase system. Receptors with a hydrophobic domain. Cytosolic tyrosine kinase, Guanylate cyclase (ANF receptor) Ser / Thr kinase (TGF family), Tyr kinase (growth receptors). Cytosolic tyrosine kinases (integrin, T / b cell, cytokine rec). Cytosolic Ser / Thr kinases. Caspase activating signaling pathways (TNF receptor). Cytosolic receptors and nuclear receptors. Hypoxia signaling.

2nd week:

Lecture: AMPK signaling, sport biochemistry. Stress biochemistry (3 hrs) Direct energy sources during physical activity. The effect of training on aerobic and anaerobic performance. Function and effect of AMP-activated protein kinase (AMPK) on metabolism and performance. Training with drugs, doping agents. Function of stress proteins under physiological and pathological conditions. The formation of stress proteins, the heat shock factor cycle. Groups of stress proteins and their function. Folding diseases. Chaperone therapies

3rd week:

Lecture: Biochemistry of the extracellular matrix. Biochemistry of chromatin and transcription factors (3 hrs) Glycosaminoglycans and proteoglycans. Collagens: structure, function and genetic origin. Collagenopathies. Fibrillin, Elastin. Adhesive proteins and their function. Cell-ECM junctions. Levels of regulation of eukaryotic gene expression. The active chromatin. Regulation of transcription. mRNA level regulation. Regulation of translation. Post-translational modifications. Gene therapy: restoration of biochemical function.

4th week:

Lecture: Medical lipid metabolism (3 hrs) Cholesterol derivatives. Synthesis and biochemistry of steroid hormones, bile acids and vitamin D. Organization of lipid structures. Mixed micelles in the digestive tract.

Lipoproteins in blood plasma. Synthesis of cholesterol Cholesterol transport in the body. The LDL receptor and its gene. Excretion of cholesterol. Biochemical explanation of elevated blood cholesterol levels. Biochemical explanation of obesity.

5th week:

Lecture: Liver biochemistry I (3 hrs) Structural and functional units of the liver (classical lobule, acinus). Blood supply and cell types of the liver. Liver filtering (first-pass) function in the example of glucose metabolism and ammonia detoxification. Zonal heterogeneity of the liver: comparison of the biochemistry of periportal and perivenous regions, overview of relevant metabolic pathways. Glutathione metabolism in the liver: GSH synthesis and transport, the antioxidant role of GSH. Biotransformation. Xenobiotic receptors and their function. Phase I reactions. Role and function of CYP450 genes and enzymes.

6th week:

Lecture: Liver biochemistry II (2 hrs) Biotransformation Phase 2 reactions: glucuronidation, sulfatation, conjugation with amino acids, acetyl-CoA, and glutathione. Function of GST genes and enzymes. The mercapturic acid pathway. Alcohol metabolism. Biochemical mechanism of alcohol-drug interactions (with examples) and medical consequences (cirrhosis, fibrosis, fatty liver, necrosis). The role of the liver in inflammation: acute phase reaction and acute phase proteins.

7th week:

Lecture: Biochemistry of inflammation (3 hrs) The early stage of inflammation: damage signals, pattern recognition receptors, activation of inflammatory signaling pathways, release of inflammatory mediators, their effects on the liver, central nervous system, and blood vessels. Transmigration of leukocytes. Phagocytosis, oxidative burst, NADPH oxidase complex function. Acquired and inherited

immunodeficiency conditions.

8th week:

Lecture:

Iron metabolism. Synthesis of porphyrins (3 hrs)
Iron-containing proteins and their biological role.
Uptake, transport and storage of dietary iron.
Regulation of iron utilization: stability of transferrin receptor and ferritin mRNA, the IRE binding protein. Role of the liver in iron metabolism: hepcidin function and regulation of hepcidin gene activity. Regulation of iron uptake in hypoxia and inflammation. Iron metabolism disorders: anemia and haemochromatosis.
Synthesis and catabolism of porphyrins.
Biochemical interpretation of porphyrias

9th week:

Lecture: Metabolism of porphyrins. Hemoglobin and myoglobin (3 hrs)
Catabolism of porphyrins. Formation, conjugation, and excretion of bile dyes.
Biochemical interpretation of jaundice (icterus).
Structure of hemoglobin and myoglobin and their O₂ binding. Bohr effect. Pathological hemoglobin, glycated hemoglobin, thalassemias.

10th week:

Lecture: Biochemistry of blood clotting (3 hrs)
Blood clotting factors and cascades. Limiting factors, inhibitors and activators of blood coagulation. Fibrinolysis. Contact phase of blood coagulation. Blood clotting in the test tube and in the body. Classification of blood coagulation. Role of thrombocytes and the vascular endothelium. Activation of thrombocytes. The role of liver in hemostasis. Anticoagulant drugs.

11th week:

Lecture: Neuroenergetics, Neurotransmitters (3 hrs)

Reading materials:

Thomas M. Devlin: Textbook of Biochemistry with Clinical Correlations.
7th edition. John Wiley & Sons, 2010. ISBN: 978-0-470-28173-4.

Characteristics of CNS metabolism: energy-gaining processes in neurons. Use of sugars and ketone bodies. Biochemical basis for the toxic effects of ammonia. Hepatic encephalopathy.
Biochemical background of the detrimental effect of oxygen deficiency on CNS. The biochemical background of Alzheimer's disease and its comprehensive therapeutic approach.
The metabolism of the central nervous system, the function of the blood-brain barrier. Classical neurotransmitters: synthesis, transport, exocytosis, activated signaling pathways, biological effects. Non-classical neurotransmitters. Influencing neurotransmission with drugs and poisons.

12th week:

Lecture: Biochemistry of cell proliferation (3 hrs)
The cell cycle and the mitotic cascade. M-phase kinase. Products and functions of proto-oncogenes. Biochemical mechanisms of oncogenesis. Tumor suppressor genes and their biochemical functions. Biochemistry of natural cell death.

13th week:

Lecture: Tumor cell metabolism (3 hrs)
Signal pathways that alter tumor metabolism. Increased glycolysis and Warburg effect. The role of Ser, Gly metabolism and C1 fragments. Significance of the pentose phosphate pathway. Biochemical interpretation of enhanced glutaminolysis. Co-occurrence of fatty acid synthesis and degradation.

14th week:

Lecture: Summary, discussion of thematic questions for final exam (5h)
Practical: Measuring cell viability.

Requirements

Requirements for signing the semester:

Students must fulfil the practice and attend the obligatory lectures. Students cannot miss any obligatory lecture, otherwise the subject won't be signed, and the student can't take the final exam. Lectures are not compulsory for repeaters (if they got signature previously). The lecture slides will be uploaded to the e-learning site of the Faculty of Pharmacy.

There is one practice on the 13th week, which is obligatory for every student. Those who don't attend the practice, they can't get signature for the semester and can't take the final exam. Practices are not obligatory for repeaters (if they got signature previously).

Students can find the digital notebook, practical descriptions, and all information regarding the practices on the e-learning site of the Faculty of Pharmacy.

The final „A”, „B” and „C” exams are written exams. Students have to take in-person e-exams that take place at the Kassai Street Campus of the University of Debrecen (TEOK107 – e-exam lecture hall; [https://unideb.hu/hu/elerhetosegek/?poi\[860\]](https://unideb.hu/hu/elerhetosegek/?poi[860])). The e-exam is a combination of tests and essay questions from the Pharmaceutical Biochemistry II lectures. 60% is needed to get a passing grade. If a student fails the „C” written exam, the faculty provides a chance for an oral exam in front of an examination committee. There are no exam questions, student can be asked from any part of the lectures. If the student passes the oral “C” exam, he/she will be given a grade 2 (pass).

Improvement exam: Students who wish to improve their grades can take one improvement exam during the exam period. In case of the improvement exam we will count the better grade.

Other. There is an elective course called Biochemistry catching up course (GYBFK02P4) that aims to help preparing for the final exam. Students can register to this course via Neptun.

Please follow the announcements of the Faculty of Pharmacy via the e-learning page (login with your university network ID and password).

Subject: **PHARMACEUTICAL TECHNOLOGY PRACTICE I.(PRESCRIPTION WRITING I.)**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **56**

1st week:

Practical:

Introduction, general information. Lab safety, laboratory regulations. Requirements. Weighing.

- Weighing of chamomile, and talcum.
- Weighing of Paraffinum liquidum, and distilled

water.

To learn: Latin declension, numbers.

2nd week:

Practical:

Technical books of pharmacy (European Pharmacopoeia, Formulae Normales, Hungarian Pharmacopoeia). The prescription, nomenclature. Simple calculations (w/w %). Solutions, auxiliary materials.

- Weighing of Paraffinum liquidum, and distilled water.

3rd week:

Practical:

The latin form of prescriptions.

Simple and composite solutions for internal and external use.

- Solutio metronidazoli FoNo VIII.

4th week:

Practical:

Enemas and solutions for internal use. Dose calculation.

- Solutio papaverini 50,0g (magistral prescription)
- Klysma chlorali pro infante 50,0 mg/ml FoNo VIII.

5th week:

Practical:

Gargle.

- Gargarisma antisepticum FoNo VIII.
- Solutio antiseptica FoNo VIII.

6th week:

Practical: Test.

7th week:

Practical: Mixture. Nasal drops.

- Mixtura pectoralis FoNo VIII.
- Nasogutta natrii chloridi 3% FoNo VIII.

8th week:

Practical: Decoctions and infusions. Ear drops.

- Infusum ipecacuanhae mite FoNo VIII.
- Otogutta borica FoNo VIII.

9th week:

Practical: Peroral drops and their dose calculation

- Gutta expectorans FoNo VIII.
- Gutta ethylmorphini FoNo VIII.

10th week:

Practical: Suspension.

- Suspensio terpini FoNo VIII.
- Suspensio siccans FoNo VIII.

11th week:

Practical: Test.

12th week:

Practical: Emulsions, liniments.

- Emulsio olei ricini virginalis FoNo VIII.
- Linimentum scabucidum FoNo VIII.

13th week:

Practical:

- Suspensio zinci aquosa FoNo VIII.
- Suspensio zinci oleosa FoNo VIII.

14th week:

Practical: Supplemental practice. Consultation. Correction.

Requirements

Active participation in pharmaceutical technology lab sessions is mandatory. Attendance at lab sessions will be monitored. Absences must be justified. Make-up lab sessions are mandatory and may be scheduled at a time agreed upon with the lab instructor; during the regular semester, a maximum of two lab sessions may be made up. More than two unexcused absences or unfulfilled labs will result in the denial of the semester signature.

Students must arrive at the practical sessions prepared; before the session begins, they must present the lab report on that day's preparations to the instructor; until then, the student may not begin the

session. Instructors will explain the formal and content requirements for the reports at the beginning of the semester. During the practical sessions, everyone must keep a record in their lab report, which must be submitted to the lab instructor at the end of each session along with the prepared formulations; this is a prerequisite for successfully completing the lab session.

Performance in pharmaceutical technology is graded on a five-stage practical scale. Requirements for earning a passing grade in the practical component:

Two major written exams are held during the semester. A passing grade requires 60% of the total points, but errors due to a lack of basic knowledge (mistakes in units of measurement, dosage errors, or medication exchanges) are not permitted. Students who receive a failing grade are given one opportunity to rewrite the major written exam to correct their work. By the end of the semester, no grade for any of the major written exams may be a failing (1). If one or both grades are a failing (1), we will refuse to sign the semester.

The preparation of the pharmaceutical formulations specified in the schedule is mandatory; deviations from this are permitted only in exceptional, justified cases with the instructor's permission. During the semester, at least 4 of the formulations prepared by each student will be checked by weight. Any preparation that receives a failing grade must be remade.

At the beginning of the lab sessions, students may be tested on unit conversions, concentration calculations, Latin abbreviations, terminology, terms referring to the effects of medications, and commonly used synonyms. If the assignment is error-free, extra points may be earned on the next major written exam.

A mandatory weekly written test covers the physical and chemical properties, pharmacological effects, and pharmaceutical applications of the active and excipient ingredients used in that day's lab session. Students must score at least 40% on this material knowledge assessment; otherwise, they cannot begin the lab session.

During the semester, as specified in the schedule, students will be required to prepare medications independently and take an oral exam on the related theoretical knowledge; these will be graded in every case. Students must correct any unsatisfactory independent medication preparation.

The grade for the prescription preparation course is calculated as the average of $1A + 1B + 2 + 3 + 4$, where: 1A and 1B are the two major written exams; 2 is the average of the essays written at the beginning of the course; 3 is the individual medication preparation; and 4 is the average of the weight checks.

Subject: **PHARMACEUTICAL TECHNOLOGY THEORY II.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture:

Pharmaceutical dosage forms: liquid pharmaceutical forms, solutions, stock solutions, aqueous solutions, oily solutions, syrups, aromatic waters, gargles, alcoholic solutions.

2nd week:

Lecture:

Suspensions. Definitions, types of suspensions, physical and chemical basics of suspensions. Stability of suspensions. Formulation of

suspensions, investigations.

3rd week:

Lecture:

Emulsions. Macro and microemulsions.
Emulsifying agent. Stability of emulsions.
Stabilization of emulsions. Formulation of emulsions, investigations.

4th week:

Lecture:

Powders. Dusting powders.

5th week:

Lecture:

Drops. Oral drops. Nasal drops. Ear drops

6th week:

Lecture:

Drug dosage, dose control and calculation.
Dosage form design, administration, choosing the proper dosage form.

7th week:

Lecture:

Basics of tablet formulation.
Granules. Theoretical bases of the formulation of granules. Types of bandage. Modes for the formulation of granules. Dry and wet granulation. Structure granulation. Granulation with fluidization.

8th week:

Lecture:

Ingredients of tableting and granulation.
(Diluents, desintegration agents, binders, adsorption agents, moisture maintain agents, hydriphylyzing agents, glidant, lubricant, antiadhesion agents, antistatic agents, dyes, colouring agents.). Investigation of tablets and granules.

9th week:

Lecture:

Inhalations and aerosols. Definitions..
Biopharmaceutical problems. Formulation of inhalations and aerosols in theory and also in practice. Propellants. Dosage forms that protect environment. Containers for aerosols. Filling of aerosols. Investigation of aerosols.

10th week:

Lecture:

Pharmaceutical dosage forms for rectal use. Definitions. Suppository bases and suppository ingredients. Formulation of suppository by cold compression and moulding. Special formulations for suppositories, investigation of suppositories. Suppository mold.

11th week:

Lecture:

Vaginal pharmaceutical forms (vaginal suppositories, vaginal balls, -cylinders, -tablets). Other vaginal pharmaceutical forms. Biopharmaceutical problems. Pills. Formulation of pills. Control of pills. Bolus

12th week:

Lecture:

Pharmaceutical preparations produced by 3D printing. Personalized medication.

13th week:

Lecture:

Primer packing materials. Describing primer packing materials and containers: glass, plastic. Investigations. Special packing materials.

14th week:

Lecture: Consultation

Requirements

Students have to attend 30% of the lectures.

Requirements for signing the Lecture book: The Department may refuse to sign the subject if the

student didn't attend 30% of lectures according to attendance list.

At the end of semester students have oral exam. The prerequisite of oral exam is a written test before exam. If student doesn't write more than 60% and fail the written test, it is prohibited to take an oral exam and get a fail (1) mark.

Department of Physiology

Subject: **HUMAN PHYSIOLOGY II.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **42**

Seminar: **23**

1st week:

Lecture:

Basic neural interactions in the CNS.

Role of spinal cord and brainstem in motor coordination

Role of cerebellum, basal ganglia and cerebral cortex in motor coordination

2nd week:

Lecture:

Physiology of sensory functions and skin sensation.

Pain and temperature sensation.

Mechanism of hearing and vestibular sensation.

3rd week:

Lecture:

Physical basis of vision

Eye-movements, optical reflexes, basic mechanism of color vision.

Taste and olfaction I.

4th week:

Lecture:

Monoaminergic system, motivation, reward, addiction, regulation of behaviour.

Sleep, wakefulness, attention, mechanism of circadian rhythm.

Learning, memory, speech.

5th week:

Lecture:

Hypothalamic functions. The autonomic nervous system.

Introduction, preparation for laboratory practice

General principles of endocrinology

Self Control Test

6th week:

Lecture:

Hypophysis, growth hormone

The hormones of adrenal cortex I.

The hormones of adrenal cortex II.

7th week:

Lecture:

Calcium balance, physiology of bone

The hormones of adrenal medulla, catecholamines

The thyroid gland

8th week:

Lecture:

Endocrine control of human reproduction and development I.

Endocrine control of human reproduction and development II.

9th week:

Lecture:

Endocrine regulation of intermediary metabolism II.

Introduction, quantitative description of renal function

Mechanism and regulation of glomerular filtration

10th week:

Lecture:

Tubular transport processes

Urinary concentration and dilution, clinical correlates

Self Control Test

11th week:

Lecture:

Osmoregulation, water balance, diuretics

Defense of body fluid volume, sodium balance

12th week:

Lecture:

Acid-base balance and acid-base disturbances

Potassium balance, mycturition

13th week:

Lecture:

Regulation of food intake and energy balance

Nutrients and vitamins

Regulation of body temperature

14th week:

Self Control Test

Requirements

1. Signature of the semester

Attendance of lectures and seminars is compulsory. The signature of the semester may be refused in case of more than four absences from the seminars. The completion of a missed seminar with a different group is not possible. Student must attend on seminars with the group specified by the Registrar's Office. For continuous updates on all education-related matters, please check the elearning.med.unideb.hu web site (Department of Physiology menu item).

2. Evaluation during the semester (mid-semester tests)

The progress of students will be tested 3 times during the semester in the form of a written test (multiple choice questions). Students may earn bonus points that can be used to improve the score of the written part on the closing exam. Bonus point calculation is based on the actual semester's scores.

The average score of the three mid-term tests is calculated and

a). If the average score is 80% or higher, the student is exempted from written part of the final exam, and only the oral part will be performed.

b). If the average score is between 70% and 80%, 10 bonus points will be added to the result of the written part of the final examination.

c). If the average score is between 60% and 70%, 5 bonus points will be awarded.

If the number of absences of either the seminars or lectures exceeds four, the bonus points are lost.

3. Examination

The second semester is closed by the final exam, which is composed of a written test and an oral section, covering the topics of all lectures, seminars and laboratory practices of the full academic year. The list of oral exam questions is available on the elearning.med.unideb.hu web site (Department of Physiology menu item). The passing limit for the written test is 60%. (together with the bonus points). The result of the exam is failed if the student fails either on the written part or on the oral part.

If one wishes to improve his/her former Physiology exam mark, it is possible to take improvement exam. Note that the mark of improvement exam depends on the actual actual performance, even if it is worse than the previous result!

Subject: **HUMAN PHYSIOLOGY II. PRACTICAL**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **22**

1st week:

Practical: Orientation lecture

2nd week:

Practical: Investigation of the cardiovascular functions

3rd week:

Practical: Determination of parameters characterising the respiratory functions

4th week:

Practical: Examination of the blood

5th week:

Practical: Examination of the cranial nerves

6th week:

Practical: Effects of the electrolytes on the uterine smooth muscle

7th week:

Practice: Effects of neurotransmitters and hormones on the uterine smooth muscle function

8th week:

Practical: Simulation of the action potential in the squid axon

9th week:

Practical: Computer simulation of the humoral regulation of the intestinal smooth muscles

10th week:

Practical: Remedial lab

11th week:

Practical: Exam

Requirements

1. Signature of the semester

Attendance of laboratory practices is compulsory. The signature of the semester may be refused in case of more than two absences from the practices. All missed practices must be made up.

Completion of all topic sheets in the Exercise Book, each verified by the signature of the teacher, is also a precondition of the signature. Students must attend on laboratory practices with the group specified by the Registrar's Office.

For continuous updates on all education-related matters, please check the elearning.med.unideb.hu web site (Department of Physiology menu item).

2. Evaluation during the semester (mid-semester tests)

None

3. Examination

Laboratory practical knowledge of the students will be tested at the end of the second semester as

part of the of the Lab Exam evaluation with five level grades.

As a precondition of attending the Lab Exam, the fully completed Exercise Book (with all the verified topics) must be presented. Students are expected to perform the given experiment on their own and must be familiar with the theoretical background also.

If the evaluation of the Lab Exam is 'fail' (1) then the Lab Exam can be repeated once during the exam period. There will be only one date for the improvement of the Lab Exam during the exam period.

Improvement of the successful Lab Exam grade is NOT possible during the regular examination period.

Division of Pharmacognosy

Subject: **PHARMACOGNOSY PRACTICE**

Year, Semester:

Number of teaching hours:

Practical: **56**

1st week:

Practical: Introduction. General discussion.

sesquiterpene lactones. Bitterness value determination.

2nd week:

Practical: Carbohydrate-containing plant drugs I.

9th week:

Practical: Iridoid containing plant drugs.

3rd week:

Practical: Carbohydrate-containing plant drugs II.

10th week:

Practical: Triterpenes, triterpene saponins.

4th week:

Practical: Fixed oils. Plant drugs containing organic acids and derivatives.

11th week:

Practical: Cardenolid glycosides.

5th week:

Practical: Essential oils I.: Plants containing monoterpene-based essential oils.

12th week:

Practical: Basic techniques in medicinal plant biotechnology, in vitro cultures producing secondary metabolites.

6th week:

Practical: Essential oils II.: Plants containing monoterpene-based essential oils II..

13th week:

Practical: Practical exam: Recognition of plant drugs.

7th week:

Practical: Essential oils III.: Sesquiterpene and phenylpropanoid-based essential oils.

14th week:

Practical: Practical exam: Recognition of plant drugs.

8th week:

Practical: Drugs containing secoiridoids and

Reading materials:

William C Evans: Pharmacognosy.

16th. Saunders Ltd., 2009. ISBN: 978-0702029332.

J. Bruneton: Pharmacognosy, Phytochemistry, Medicinal Plants.

2nd ed.. Lavoisier, 1999. ISBN: 978-1898298632.

European Pharmacopoeia.

4th edition.2004.

Requirements

Detailed information is given in the first practical course and via the e-learning system.

Completion of the practice requires:

-plant drug and herbal tea recognition test (in person, or, on a video platform, face-to-face, depending on the situation)

-completion of the three practical tests (in person, or on e-learning platform, depending on the situation)

Subject: **PHARMACOGNOSY THEORY II.**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Alkaloids: history, distribution, properties. Lysine and ornithine derived alkaloids: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

2nd week:

Lecture: Phenylalanine and tryptophane-derived alkaloids: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

3rd week:

Lecture: Glycine and histidine derived alkaloids; other, special amino acid derivatives, glucosinolates, isothiocyanates: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

4th week:

Lecture: Phloroglucin-derivates, anthraquinone derivatives: Biosynthetic origin, classification, chemistry, therapeutic applications in

phytotherapy.

5th week:

Lecture: Flavonoids: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

6th week:

Lecture: Flavonolignanes, lignanes: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

7th week:

Lecture: Coumarines, furano and pyranocoumarines: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

8th week:

Lecture: Tannins: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

9th week:

Lecture: Naphtoquinones, phenolic compounds, phenolic glycosides, phenypropanoids: biosynthetic origin, classification, chemistry, therapeutic applications in phytotherapy.

10th week:

Lecture: Phytotherapy in general. Evidence-based phytomedicine. Phytotherapeutic products. Side-effects, contraindications and interactions of herbal medicine.

11th week:

Lecture: Antioxidants, plant anti-inflammatory agents. Phytotherapy of the cardiovascular and

the central nervous system.

12th week:

Lecture: Phytotherapy of the gastrointestinal and the urogenital tracts.

13th week:

Lecture: Phytotherapy of the respiratory system. External applications. Chemoprevention.

14th week:

Lecture: Consultation.

Requirements

Detailed information is given in the first lecture and via the e-learning system.

Completion of the subject requires:

- examination during the exam period based on the uploaded lectures (in person, or, on video platform face-to-face, depending on the situation).
- we offer an optional pre-examination test for offered grade, before the exam period (in person, or, on e-learning platform, depending on the situation).

CHAPTER 18

ACADEMIC PROGRAM FOR THE 3RD YEAR

Department of Behavioural Sciences

Subject: **PHARMACEUTICAL PSYCHOLOGY**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Nature of psychology: main fields, theories and methods. Biopsychosocial model

2nd week:

Lecture: Somatic symptom and related disorders

3rd week:

Lecture: The placebo effect

4th week:

Lecture: The psychology of pain

5th week:

Lecture: Stress, coping, psychological immune system

6th week:

Lecture: Health behaviours: definition, demographic determinants. Variables influencing health attitudes

7th week:

Lecture: Illness as crisis. Chronic illness, hospitalisation

8th week:

Lecture: Communication with people with special needs and handicap

9th week:

Lecture: Addictions: definition, classification, prescription drug abuse, alcohol and drug dependence, smoking, behavioural addictions

10th week:

Lecture: Illness behaviours: definition, the experience of illness, patient role. Representations and benefits of illness. Illness cognitions

11th week:

Lecture: Mood disorders and psychotic disorders. Symptoms, prevalence, relevance and compliance

12th week:

Lecture: Change in health behaviour. Stages of change, the Prochaska-DiClemente model.

13th week:

Lecture: Psychosomatics

14th week:

Lecture: Pre-exam

Requirements

Requirements: Written pre-exam at the last week of the semester (offered grade). If the student accepts the offered grade, it will be the exam grade. If the student does not accept the offered grade, (s)he can take the exam during the exam period, starting with an „A” exam (written).

Department of Foreign Languages

Subject: **MEDICAL HUNGARIAN I.**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Introduction; Revision

2nd week:

Practical: Body parts and internal organs

3rd week:

Practical: Most common diseases

4th week:

Practical: Types of medicine

5th week:

Practical: Forms of medicine; Containers

6th week:

Practical: How to take medicine?; Frequent side effects

7th week:

Practical: Questioning the patient

8th week:

Practical: Mid-term test

Self Control Test

9th week:

Practical: Dialogues in the pharmacy 1.

10th week:

Practical: Dialogues in the pharmacy 2.

11th week:

Practical: Equipment in the pharmacy

12th week:

Practical: Medicine kit

13th week:

Practical: Revision

14th week:

Practical: End term test; Oral exam

Self Control Test

Requirements

Attendance

Attending language classes is compulsory. If a student is late it is considered as an absence.

Students can miss only 10 percent of the classes that is maximum 2 occasions. In case of more than 2 absences, the signature may be refused. Making up a missed lesson with another group is not allowed. Medical notes are not accepted.

The teacher evaluates active participation in each class. Students are not allowed to share coursebooks during classes; therefore, if a student fails to bring the coursebook for the second time, attendance for that class is not granted.

Testing, evaluation

During the semester students must sit for two oral tests. If a student is late for the test, he/she is not allowed to take it.

The tests are scheduled:

-Mid-term test: week 8

-End-term test: week 14

During the examinations students are not allowed to bring any devices suitable for communication or data storage (e.g. electronic devices) into the examination venue. If the supervisor detects the presence of such a device, the examination will be suspended and disciplinary proceedings will be initiated in writing to the Dean.

A further minimum requirement is passing 10 word quizzes during the semester. There are five word quizzes before and another five after the mid-term test. If students fail or miss any word quizzes they cannot start their oral test and have to take a vocabulary exam that includes all the words before the tests. A word quiz can be postponed by a week and students can take it only with their own teacher. Missed word quizzes cannot be made up for on the day of the test.

Based on the final score the grades are given as follows.

Final score	Grade
0-59%	fail (1)
60-69%	pass (2)
70-79%	satisfactory (3)
80-89%	good (4)
90-100%	excellent (5)

Coursebook: Krasznai, Mónika: Bevezetés a gyógyszerész szaknyelvbe

Department of Laboratory Medicine

Subject: **CLINICAL BIOCHEMISTRY AND PATHOMECHANISMS OF DISEASES I.**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **28**

Practical: **14**

1st week:

Lecture: 1. Introduction: pathobiochemistry, clinical chemistry, laboratory diagnostics
2. Different levels of laboratory diagnostics (reference values, requesting test, interpretation of results)

2nd week:

Lecture: 3. Laboratory aspects of investigating human disorders
4. Pathochemistry and laboratory signs of cell

damage

3rd week:

Lecture: 5. Pathobiochemistry of inflammation
6. Pathobiochemistry of plasma proteins

4th week:

Lecture: 7. Clinical biochemistry of tumor metastasis
8. Pathobiochemical alterations in association with tumor growth and metastasis formation and

their laboratory detection

5th week:

Lecture: 9. Tumormarkers in the diagnosis of malignant diseases
10. Disorders of iron metabolism. Laboratory diagnostics of microcytic anemias.

6th week:

Lecture: 11. Laboratory diagnostics of hemoglobinopathies
12. Laboratory diagnostics of macrocytic and hemolytic anemias

7th week:

Lecture: 13. Laboratory diagnostics of acute and chronic leukemias and lymphomas I.
14. Laboratory diagnostics of acute and chronic leukemias and lymphomas II.
Practical: Laboratory safety. Laboratory informatics.

8th week:

Lecture: 15. Laboratory diagnostics of acute and chronic leukemias and lymphomas III.
16. Laboratory diagnostics of acute and chronic leukemias and lymphomas IV.
Practical: Hematology I. Blood collection, anticoagulants. Preparation of a blood smear, staining.

9th week:

Lecture: 17. Laboratory diagnostics of quantitative platelet disorders.
18. Laboratory diagnostics of central nervous system diseases. Laboratory investigation of the cerebrospinal fluid.
Practical: Hematology II. Evaluation of a normal smear. Red blood cell morphology. Determination of reticulocyte count.

Self Control Test

Reading materials:

Kappelmayer Janos: Practicals in Laboratory Medicine.

10th week:

Lecture: 19. ABO and Rh Blood Groups 20. Other blood group system (Kell, Kidd, Duffy, MN, Ss, I)
Practical: Hematology III. Determination of hemoglobin and hematocrit. Hematology analyzers.

11th week:

Lecture: 21. Compatibility testing. Transfusion reactions
22. Preparation of blood products
Practical: Hematology IV. Evaluation of peripheral smears in malignant hematological diseases. Protein electrophoresis, myeloma multiplex.

12th week:

Lecture: 23. Inherited metabolic diseases and their laboratory diagnostics I.
24. Inherited metabolic diseases and their laboratory diagnostics II.
Practical: Determination of ABO and Rh blood groups.

13th week:

Lecture: 25. Inherited metabolic diseases and their laboratory diagnostics I.
26. Clinical biochemistry at the extremes of ages
Practical: Detection of irregular antibodies, antibody screening, compatibility testing.

14th week:

Lecture: 27. Therapeutic drug monitoring
28. Clinical biochemistry and laboratory diagnostics of porphyrias, Vitamins
Practical: Immunoassay.

Self Control Test

William J. Marshall, Marta Lapsley, Andrew Day, Kate Shipman: Clinical Chemistry. 9th Edition. Mosby-Elsevier, 2021.

Requirements

Participation on practicals: Attendance of practicals is obligatory. Altogether one absence in the first semester and one absence in the second semester is permitted. In case of further absences, the practicals should be made up for by attending the practicals with another group in the same week, or a medical certificate needs to be presented. Please note that strictly only a maximum of 2 students are allowed to join another group to make up for an absence.

Requirements for signing the Lecture book: The Department may refuse to sign the Lecture book if the student is absent from practicals more than allowed in a semester.

Assessment: At the end of the second semester there is a written examination assessed by the five-grade evaluation. During the second semester there will be 3 SCTs. Bonus percentage will be given on the basis of the results of the SCTs, which will be added to the result of the final exam. The Clinical Biochemistry II. final exam will be a written test from the material of the I. and II. semester and clinical physiology (aok.unideb.hu/klinfiz). The materials of Clinical Biochemistry subject are uploaded on the e-learning website.

Requirements for examinations: The examination is based on the lecture and practical material (Practicals in Laboratory Medicine, eds.: János Kappelmayer, 2023) as well as the relevant chapters from the textbook of Marshall: Clinical Chemistry (9th edition, 2021).

Department of Pathology

Subject: **PHARMACEUTICAL PATHOLOGY I.**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **14**

Seminar: **14**

1st week:

Lecture: Introduction

2nd week:

Lecture: Adaptive processes

3rd week:

Lecture: Inflammation

4th week:

Lecture: Disorders of calculation

5th week:

Lecture: Immunopathology I.

6th week:

Lecture: Immunopathology II.

7th week:

Lecture: Semester break

8th week:

Lecture: Genetic diseases

9th week:

Lecture: Environmental and nutritional diseases

10th week:

Lecture: Infective pathology

11th week:

Lecture: Oncopathology

12th week:

Lecture: Diseases of the muscular and skeletal system

13th week:

Lecture: Hemapathology

14th week:

Lecture: Test exam

Department of Pharmaceutical Chemistry

Subject: **PHARMACEUTICAL CHEMISTRY PRACTICE II.**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Safety instructions, requirements.

2nd week:

Practical: Carbohydrates.

3rd week:

Practical: Imipramine, promethazine, trimethoprim, quinine.

4th week:

Practical: Coffein, theobromine, theophylline, allopurinol.

5th week:

Practical: Analysis of china alkaloids, drotaverin, papaverin. Quareline tablet.

6th week:

Practical: Investigation of the Boron-Zinc ointment; investigation of Pulvis Chinacisalis

7th week:

Practical: Analysis of Suppositorium analgeticum and Rutascorbin tablet.

Requirements

Laboratory practices are grouped into quarterly blocks. Attendance at the laboratory practices is obligatory. If a student is absent from more than one practice for any reason (including cases where the student was not permitted to start the practice), the semester will not be accepted. There is no possibility to arrange additional or make-up laboratory practices.

The semester of the student's lab practice will not be accepted in either of the following cases:

1. Four unacceptable written tests/demos with the evaluation "Failed" (Mark 1), or three unacceptable written tests/demos with the evaluation "Failed" (Mark 1) along with a certified absence,
2. The student was not permitted to start the Lab Practice in two occasions*,
3. Two missed labs for any reason (illness or unsuccessful lab practice with Mark "0"),
4. The student presented two unacceptable Lab Practice written tests/demos with the evaluation "Failed" (Mark 1), and was not permitted to start the Lab Practice in one occasion*,
5. Five demos or lab notebooks with the evaluation "Failed" (Mark 1) or "Zero" altogether in any combination,

6. The final average (the average of the demos and the notebooks) is below 2.0.

The student will not be permitted to start a Lab Practice in either of the following cases:

1. The student does not show up in the laboratory in 20 minutes from the scheduled starting date of the Practice,
2. The student cannot present her/his Lab Practice Notebook prepared according to the said requirements,
3. The student is unable to reach at least 6.0 points (50%) of the maximum score (12.0 points) related to the questions asked in connection with the topics of the Laboratory Practice!
4. When writing the test, cabs and other illegal sources are not allowed to use. If the student is found out in a cheating, the student must leave the Lab, and the Practice will be considered unsuccessful (Mark "0").

Detailed requirements will be provided in the first lab practice.

Subject: **PHARMACEUTICAL CHEMISTRY THEORY II.**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **56**

1st week:

Lecture: Local anesthetics: natural compounds. Synthetic substances: esters, amides, ketones, ethers, urethanes and amidines. Spasmolytics: papaverin and its analogues. Bencyclan.

2nd week:

Lecture: Cardiovascular drugs. Antianginal compounds: nitrit- and nitrate esters. B-Adrenergic receptor-blocking agents. Inhibitors of the calcium channel, calcium antagonists. Another coronary dilators. Cardiotonics: cardial glycosides. Another types of cardiotonics. Antiarrhythmic agents.

3rd week:

Lecture: Compounds controlling the blood pressure. Antihypertensives, hypotensives. Agents with central attack. Beta-receptor blockers, beta-adreno-receptor antagonists, adrenergic neuron-blockers. Vasodilators. Ganglionic blocking agents. Inhibitors of the angiotensin-converting enzyme. Peripheral dopamine-receptor agonists. Selective dilators of the cerebral blood-vessels. Anticoagulants.

4th week:

Lecture: Medicines of the hyperlipoidemia: clofibrate, nicotinic acid, lovastatin. Compounds effective on the hematopoiesis. Plasma substitutes. Substances effective on the hemostasis: anticoagulants, antithrombotics, inhibitors of platelet aggregation. Coagulants, derivatives of vitamin K. Fibrinolysis inhibitors.

5th week:

Lecture: Diuretics: xanthin and uracyl derivatives. Inorganic mercury salts. Sulfonamides, amino acids, cyclic amidines, aldosteron antagonists. Osmotic diuretics. Laxatives, choleretics. Antacid agents and obstipants.

6th week:

Lecture: Non-steroid anti-inflammatory agents: salicylates, arylalkanoic acids, N-arylanthranylic acids, 5-pyrazolone-derivatives. Antirheumatic agents: compounds of gold. 4-Amino-quinolines, thiols. Anti-gouty agents. Medicines of the immune system: immunostimulants.

Immunosuppressive agents. Vitamins.

7th week:

Lecture: Steroid hormones. Androgenes, anabolics, anti-androgenes. Oestrogenes, gestogenes, contraceptives. Corticosteroids: mineralo- and glucocorticoids. Agents effective on the thyroid dysfunction. Antidiabetics. Prostaglandins.

8th week:

Lecture: Inorganic and organic antiseptic agents, disinfectants. Alcohols, phenols, N-chloro compounds, surface active agents, dyes. Synthetic antibacterial agents. Sulfonamides, nitrofurantoin derivatives.

9th week:

Lecture: Fluoroquinolones. Antifungal compounds: imidazoles, triazoles, Antifungal antibiotics: polyenes, griseofulvin.

10th week:

Lecture: Antibacterial antibiotics. Cyclopeptides, lipo- glyco- and depsipeptides. Beta-lactam antibiotics. Penicillins: natural and semi-synthetic penicillins. Beta-lactamase inhibitors.

11th week:

Lecture: Natural and semi-synthetic cephalosporins. Carbacephems. Monocyclic B-lactams.

12th week:

Lecture: Aminoglycosides (aminoglycoside) antibiotics. Macrolide antibiotics, erythromycin and semisynthetic derivatives. Ansa-macrolides. Natural and semi-synthetic tetracyclins.

13th week:

Lecture: Medicines of the parasitic diseases. Antimalarial agents: quinine and other derivatives. Antiprotozoal agents. Medicines of toxoplasmosis and amoebiasis. Trichomonocides and trypanocidal substances. Anthelmintics.

14th week:

Lecture: Antiviral compounds: Acyclovir, Ribavirin, Zidovudine. Neuraminidase inhibitors. Antineoplastic agents: cytostatic compounds. Folic acid-, purin-, and pyrimidin-antagonists. Nucleoside antagonists. Biological alkylating compounds. Platinum derivatives. Anthracyclineglycosides. Taxol. Targeted chemotherapy.

Requirements

Lectures : Attendance to lectures is emphatically recommended. All material covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Several new concepts and ideas are discussed in the lectures only and are not present in the textbook.

The final exam is written and oral (covering Pharmaceutical Chemistry I. and II.).

Prerequisite for the examination: a successfully finished Pharmaceutical Chemistry Practice II.

Department of Pharmaceutical Technology

Subject: **PHARMACEUTICAL TECHNOLOGY PRACTICE II. (INDUSTRIAL PRACTICE I.)**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Practical: **56**

1st week:

Practical: Aseptic requirements. Preparation of infusions. Tests.

2nd week:

Practical: Infusio natrii chlorati Ph.Hg.VII., Infusio salina Ph.Hg.VII.

3rd week:

Practical: Infusio glucosi Ph.Hg. VII., Infusio manniti 100mg/m Ph.Hg.VII.

4th week:

Practical: Infusio natrii lactici Ph.Hg. VII., Infusio gastrica

5th week:

Practical: Test from infusions.

6th week:

Practical: General principles and technologies of granulation, excipients of granules.

7th week:

Practical: Wet granulation by kneading.

8th week:

Practical: Pharmacopoeial tests and test devices of granules.

9th week:

Practical: General principles and technologies of tablet compression, tablet presses.

10th week:

Practical: Test from tableting

11th week:

Practical: Galenic drug preparation, aims and methods. Pharmaceutical standard procedures. Liquid dosage forms '1. Galenic solutions, suspensions.

12th week:

Practical: Liquid dosage forms '2. Syrups and Colloidal solutions. Formulation techniques, equipment.

13th week:

Practical: Semisolid dosage forms '1. Hydrophilic ointments. Formulation techniques, equipment. Semisolid dosage forms 2. Hydrophobic ointments.

14th week:

Practical: Test 3.

Requirements

The course consists of 3 parts (solid preparations, galenic preparations and aseptic preparation), each of which lasts 4 weeks. The course is taught in small groups in order to improve manual skill and understanding. During the semester, students will fulfil the three parts according to a schedule prepared by themselves and approved by the instructors.

The condition for participation in the course is to present a document proving a valid medical suitability check. The examination is the same as the examination required for participation in the summer practices. Sick students cannot start the practice and they must report their condition to the

instructors in advance.

No student can start a given practice if the clothing is inappropriate (wearing of a lab coat and a change of footwear is mandatory). Attendance is compulsory and any absences must be excused to the relevant instructor no later, than the next practice. Maximum two absences are allowed, but the completion of the missed practices is compulsory.

These may be made at a time agreed with the instructor of the given part within the limits of the timetable. In case of more than two unexcused absences, the semester will not be signed.

The three parts of the practical training will be evaluated at the same time, on the 13th week and attendance is compulsory. Students will write three independent papers from the three parts. In all cases (including those writing an improvement paper), the final mark is the mean of the marks of all the papers, rounded up to the nearest whole number. If the mark for any test is unsatisfactory (1), writing of an improvement is compulsory on the 14th week. The improvement paper will be graded in the same way as the first paper. If the mark for the improvement test is unsatisfactory, the course is considered failed, and the final mark is unsatisfactory (1). Students who wish to improve their marks can also write voluntarily an improvement test but only from the three parts together. They must notify the tutors no later than the beginning of the 14th week of the semester.

Subject: PHARMACEUTICAL TECHNOLOGY PRACTICE II. (PRESCRIPTION WRITING II.)

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Practical: **56**

1st week:

Practical: Introduction, general information.

Labour safety, laboratory regulation.

Requirements.

- Solutio iodi alcoholica FoNo VIII.
- Gutta ethylmorphini FoNo VIII.

2nd week:

Practical:

Revision: solution, suspension, dose calculation.

- Solutio theophyllini FoNo VII.
- Mixtura pectoralis FoNo VIII.
- Suspensio expectorans FoNo VIII.

3rd week:

Practical:

Revision: emulsion, oral drops, nasal drops.

- Emulsio olei jecoris FoNo VIII.
- Gutta expectorans FoNo VIII.
- Nasogutta natrii chloridi pro infante FoNo VIII.

4th week:

Practical:

Suppositories. Calibration of suppository moulds individually (1,2,3 g)

Determination of displacement factors.

Calculation of tota massa.

Determination of the calibration value:

1. Adeps solidus
 2. Adeps solidus compositus
- Suppositorium metamizoli 100 mg FoNo VIII.

5th week:

Practical:

Preparation of suppositories and suspension type ointments.

- Suppositorium theophyllini 250 mg FoNo VIII.
- Unguentum antisepticum FoNo VIII.
- Suspensio nystatini FoNo VIII.

6th week:

Practical:

Preparation of ointments.

- Unguentum urei FoNo VIII.
- Suppositorium papaverini pro parvulo FoNo VIII.

7th week:

Practical: Test.

Creams.

- Unguentum boraxatum FoNo VIII.
- Cremor ad manum FoNo VIII.

8th week:

Practical:

Gels. Pastes.

- Unguentum salicylicum FoNo VIII.
- Pasta zinci oxidi Ph.Hg.VIII.

9th week:

Practical:

- Unguentum haemorrhoidale FoNo VIII.
- Suppositorium haemorrhoidale FoNo VIII.

10th week:

Practical: Undivided powders.

- Pasta boraxata FoNo VIII.
- Sparsorium refrigerans FoNo VIII.

11th week:

Practical:

Test.

- Unguentum nutritivum FoNo VIII.
- Suppositorium analgeticum forte FoNo VIII.

12th week:

Practical:

- Pulvis antacidus FoNo VIII.
- Unguentum dermatoprotectivum pro infante FoNo VIII.

13th week:

Practical:

- Suppositorium spasmolyticum FoNo VIII.
- Sal ad rehydrationem FoNo VIII.

14th week:

Practical: Supplemental practice. Consultation. Correction.

Requirements

Active participation in pharmaceutical technology lab sessions is mandatory. Attendance at lab sessions will be monitored. Absences must be justified. Make-up lab sessions are mandatory and may be scheduled at a time agreed upon with the lab instructor; during the regular semester, a maximum of two lab sessions may be made up. More than two unexcused absences or unfulfilled labs will result in the denial of the semester signature.

Students must arrive at the practical sessions prepared; before the session begins, they must present the lab report on that day's preparations to the instructor; until then, the student may not begin the session. Instructors will explain the formal and content requirements for the reports at the beginning of the semester. During the practical sessions, everyone must keep a record in their lab report, which must be submitted to the lab instructor at the end of each session along with the prepared formulations; this is a prerequisite for successfully completing the lab session.

Performance in pharmaceutical technology is graded on a five-stage practical scale. Requirements for earning a passing grade in the practical component:

Two major written exams are held during the semester. A passing grade requires 60% of the total points, but errors due to a lack of basic knowledge (mistakes in units of measurement, dosage errors, or medication exchanges) are not permitted. Students who receive a failing grade are given one opportunity to rewrite the major written exam to correct their work. By the end of the semester, no grade for any of the major written exams may be a failing (1). If one or both grades are a failing

(1), we will refuse to sign the semester.

The preparation of the pharmaceutical formulations specified in the schedule is mandatory; deviations from this are permitted only in exceptional, justified cases with the instructor's permission. During the semester, at least 4 of the formulations prepared by each student will be checked by weight. Any preparation that receives a failing grade must be remade.

At the beginning of the lab sessions, students may be tested on unit conversions, concentration calculations, Latin abbreviations, terminology, terms referring to the effects of medications, and commonly used synonyms. If the assignment is error-free, extra points may be earned on the next major written exam.

A mandatory weekly written test covers the physical and chemical properties, pharmacological effects, and pharmaceutical applications of the active and excipient ingredients used in that day's lab session. Students must score at least 40% on this material knowledge assessment; otherwise, they cannot begin the lab session.

During the semester, as specified in the schedule, students will be required to prepare medications independently and take an oral exam on the related theoretical knowledge; these will be graded in every case. Students must correct any unsatisfactory independent medication preparation.

The grade for the prescription preparation course is calculated as the average of $1A + 1B + 2 + 3 + 4$, where: 1A and 1B are the two major written exams; 2 is the average of the essays written at the beginning of the course; 3 is the individual medication preparation; and 4 is the average of the weight checks.

Subject: **PHARMACEUTICAL TECHNOLOGY THEORY III.**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture:

Standards of industrial pharmacy. Documentation systems. Scale-up.

2nd week:

Lecture:

Infusion systems. Basic principles. Formulation of infusions.

3rd week:

Lecture:

Investigation of infusions. Special infusion systems. Tanks (use of plastic tanks.).

4th week:

Lecture:

Injectable systems. Basic principles. Definitions. Methods

of administration. Biopharmaceutical problems. Basic requirements for the formulation of injections. Active agents and ingredients of injectable systems. Solvents.

5th week:

Lecture:

Formulation of injections. Tanks for injections, filling and closing. Sterilization. Examination of injections and quality assurance. Stabilization of injections. Special injectable solutions. (injectable suspensions, dry powder, tablets)

6th week:

Lecture:

Ophthalmic pharmaceutical forms, definitions. Anatomy of the eye, biopharmacy problems. Requirements for ophthalmic pharmaceutical

forms. (compatibility, without irritation, free from bacteria, stability). Basic principles for pharmaceutical formulation.

7th week:

Lecture:

Ointments. Grouping of ointments. Ointment bases and classification of ointment bases. Formulation steps of ointment. Investigation of ointments.

8th week:

Lecture:

Dragée. The process of coating. The methods of coating (sugar coating, film coating, gastric coating, enteric coating.). Dry coating.

9th week:

Lecture:

Coating with fluidization. Equipment for coating. Dragée core and the temperature of drying. Investigations of dragée.

10th week:

Lecture:

Capsules. Hard gelatine capsules. Soft gelatine capsules, formulation, filling.

11th week:

Lecture:

Intestinosolvent capsules. Wafer-capsules. Investigation of capsules.

12th week:

Lecture:

Blood products. Volume replacement solutions

13th week:

Lecture:

Parenteral nutritive infusions, fat emulsions. “ All in one “ mixtures.

14th week:

Lecture: Veterinary medicinal products. FoNo Vet. Special dosage forms used in veterinary medicine. Consultation.

Requirements

Students have to attend 30% of the lectures.

Requirements for signing the Lecture book: The Department may refuse to sign the subject if the student didn't attend 30% of lectures according to attendance list.

At the end of semester students have oral exam. The prerequisite of oral exam is a written test before exam. If student doesn't write more than 60% and fail the written test, it is prohibited to take an oral exam and get a fail (1) mark.

Department of Pharmacodynamics

Subject: **GENERAL PHARMACOLOGY**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: 14

Seminar: 14

1st week:

Lecture: History of pharmacy. Basic concepts of pharmacology
Seminar: Medication routes of administration

2nd week:

Lecture: Introduction of pharmacokinetics
Seminar: Basic mechanism of pharmacology

3rd week:

Lecture: Receptors and signal transduction. Receptor pharmacology
Seminar: Transport mechanisms

4th week:

Lecture: Drug absorption
Seminar: Bioavailability according to routes of administration

5th week:

Lecture: Drug distribution
Seminar: Plasma protein bindings. Biological barriers in the body

6th week:

Lecture: Drug metabolism (phase 1 and 2).
Seminar: Enzyme induction, enzyme inhibition.

7th week:

Lecture: Drug excretion. Self control test I.
Seminar: Drug excretion – calculation (elimination constant, clearance, etc.)

Self Control Test

8th week:

Lecture: Pharmacokinetic model systems I

Seminar: Pharmacokinetic model systems I. – calculation (0th and 1st order pharmacokinetics).

9th week:

Lecture: Pharmacokinetic model systems II.
Seminar: Pharmacokinetic model systems II. – calculation (single and multi-compartment models)

10th week:

Lecture: Physiological factors influencing the pharmacokinetic parameters of drugs.
Seminar: Dose calculations (age, obesity, gender differences, pregnancy).

11th week:

Lecture: Pathophysiological factors influencing the pharmacokinetic parameters of drugs.
Seminar: Dose calculations (kidney and liver failure).

12th week:

Lecture: Drug interaction (agonism and antagonism).
Seminar: Clinical pharmacokinetics (AUC, loading dose, repeated dosing, half-life, steady state, volume of distribution).

13th week:

Lecture: Pharmacogenetics
Seminar: Development of new drugs

14th week:

Lecture: General consultation.
Seminar: Self control test II.

Self Control Test

Requirements

At the end of the semester, the exam in General Pharmacological Theory takes the form of an oral colloquium (2 topics from the list, a short elaboration, then an oral exam).

During the semester, students are required to complete two written self control tests. The average of the two assessments must be at least 50% in order for the semester to be accepted and for the student to be admitted to the exam. Below 50%, there is no possibility of improvement, we refuse to

sign the semester, the student's semester is unsuccessful. The point limits: from 60% to pass (2), from 70% to satisfactory (3), from 80% to good (4), from 90% to excellent (5). If the average result of the two tests exceeds 90%, the student will draw only one examination topic at the colloquium, while the second topic will automatically be graded as excellent (5).

Attendance at the seminars is compulsory. In the case of more than two absences, the semester will not be accepted.

Subject: **PHYTOTHERAPY**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: 1.Introduction: description of the topics, curriculum, subject requirements.

2nd week:

Lecture: Herbs affecting the central nervous system I.: vasodilators, nootropics, improving memory.

3rd week:

Lecture: 1.Herbs affecting the central nervous system II.: sedatives-hypnotics, anxiolytics.

4th week:

Lecture: 1.Phitopharmacology and the autonomic nervous system.
2. Recreational drugs.

5th week:

Lecture: Phitopharmacology of diabetes mellitus.

6th week:

Lecture: 1.Phitopharmacology of dyslipidemia.
2.Herbs with choleretic and cholagogic effects.

7th week:

Lecture: 1.Herbs and liver function.2.Phitopharmacology of the respiratory system.

8th week:

Lecture: 1.Herbs affecting the eyes and vision.

2.Self control test I.

Self Control Test

9th week:

Lecture: 1.Treatment of kidney stones with herbs.
2. Herbs for urinary tract infections

10th week:

Lecture: 1. Treatment of gynaecological problems with herbs.
2. Treatment of prostate problems with herbs.

11th week:

Lecture: 1.Phitopharmacology of the cardiovascular system I.
2.Phitopharmacology of the cardiovascular system II.

12th week:

Lecture: 1.Wound treatment with herbs.
2.Immune system and phytopharmaceuticals

13th week:

Lecture: 1.Phitopharmacology and cancer therapy I.2.Phitopharmacology and cancer therapy II

14th week:

Lecture: 1.Self control test II.
2. Consultation.

Self Control Test

Requirements

During the semester, there are two written exams from the material covered in the semester, and attendance is mandatory for these exams. The average of the two exams must be at least 50% in order for the semester to be accepted, and the student to be eligible for the final exam. There is no opportunity for improvement if the average is below 50%. In that case, the semester will be considered unsuccessful, and the student will not receive credit for the semester. The grading scale is as follows: below 50% is a failing grade, 60% or above is a passing grade of pass, 70% or above is a grade of satisfactory, 80% or above is a grade of good, and 90% or above is a grade of excellent.

Department of Foreign Languages

Subject: **MEDICAL HUNGARIAN II.**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Introduction; Revision

2nd week:

Practical: Grouping of medicine; Administration of medicine

3rd week:

Practical: Medical aids; Medical kit

4th week:

Practical: First aid kit

5th week:

Practical: Travel kit

6th week:

Practical: Important verbs

7th week:

Practical: Revision

8th week:

Practical: Mid-term test
Self Control Test

9th week:

Practical: The digestive system and related medications

10th week:

Practical: The ideal laxative

11th week:

Practical: The respiratory system and related medications

12th week:

Practical: The skin and skin preparations

13th week:

Practical: The eye and eye preparations

14th week:

Practical: Revision

Requirements

Attendance

Attending language classes is compulsory. If a student is late it is considered as an absence.

Students can miss only 10 percent of the classes that is maximum 2 occasions. Making up missed classes by attending another group is not allowed. Medical notes are not accepted.

The teacher evaluates active participation in each class. Students are not allowed to share coursebooks during classes; therefore, if a student fails to bring the coursebook for the second time, attendance for that class is not granted.

Testing, evaluation

In the Medical Hungarian II. course, students have to take a mid-term test and there is a comprehensive exam in the exam period. To obtain the course signature, students must pass the mid-term test and must not exceed the maximum number of allowed absences.

During the examinations students are not allowed to bring any devices suitable for communication or data storage (e.g. electronic devices) into the examination venue. If the supervisor detects the presence of such a device, the examination will be suspended and disciplinary proceedings will be initiated in writing to the Dean.

Students have to pass 10 word quizzes. There are five word quizzes before and another five after the mid-term test. A word quiz can be postponed by a week and students can take it only with their own teacher.

Missed word quizzes cannot be made up on the day of the test. Coursebook: KRASZNAI, MÓNKA: A GYÓGYSZERÉSZ SZAKNYELV ALAPJAI

Department of Immunology

Subject: **IMMUNOLOGY**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **28**

Seminar: **6**

Practical: **14**

1st week:

Lecture: Elements of the immune system. The structure of lymphoid tissues, primary and secondary lymphoid organs.

2nd week:

Lecture: Component and cells of the innate response. Characteristics and function of the innate immune response.

3rd week:

Lecture: Antigen presentation. Structure of MHC, MHC polymorphism. Antigen presentation. Seminar: Elements of the immune system. The structure of lymphoid tissues, primary and secondary lymphoid organs. Component and cells of the innate response. Characteristics and function of the innate immune response.

4th week:

Lecture: Antigen recognition by T-lymphocytes. The T-cell response. Activation, differentiation, effector functions. T-cell subsets.

Seminar: Antigen presentation. Structure of MHC, MHC polymorphism. Antigen presentation.

5th week:

Lecture: B-lymphocytes. An introduction to antibody structure and function.

Seminar: Antigen recognition by T-lymphocytes. T-cell response. Activation, differentiation, effector functions. T-cell subsets.

6th week:

Lecture: Inflammation. Effector function of helper T-cell. Activation and function of cytotoxic T-lymphocytes.

Practical: B-lymphocytes. An introduction to

antibody structure and function.

7th week:

Lecture: Activation and antigen-dependent differentiation of B-lymphocytes. The development of immunological memory.
Practical: Inflammation. Effector function of helper T-cell. Activation and function of cytotoxic T-lymphocytes.

8th week:

Lecture: Monoclonal antibodies. Vaccination.
Self Control Test

9th week:

Lecture: Central tolerance. Peripheral mechanisms of immune tolerance.
Practical: Activation and antigen-dependent differentiation of B-lymphocytes. The development of immunological memory. Monoclonal antibodies. Vaccination.

10th week:

Lecture: Tumor immunology, monoclonal antibodies in tumor therapy.

Practical: Central tolerance. Peripheral mechanisms of immune tolerance.

11th week:

Lecture: Anti-viral response Hypersensitivity reactions.
Practical: Tumor immunology, monoclonal antibodies in tumor therapy.

12th week:

Lecture: Mechanisms of the development of autoimmune diseases.
Practical: Anti-viral response Hypersensitivity reactions.

13th week:

Lecture: Transplantation. Immunodeficiencies.
Practical: Mechanisms of the development of autoimmune diseases. Transplantation. Immunodeficiencies.

14th week:

Lecture: Kinase inhibitors.
Self Control Test

Requirements

Signing of the Lecture Book:

Participation in the Seminars and the Practical Courses is compulsory. The Department may refuse to sign the students' Lecture book if he/she is absent from more than three seminars during semester.

Self control tests (SCTs), offered grades, end-term exam:

During the semester two self control tests (SCT) will be organised (weeks 8 and 14).

The first SCT contains the material of the lectures of weeks 1-7 as well as the material of seminars on weeks 1-7. To ensure a solid basic knowledge of immunology, students must score higher than 60 points to qualify for the 2nd SCT, hence for an offered grade.

The 2nd SCT contains the material of lectures 8-13 and seminars 8-13

If a student's score for the first SCT is 60 points or above and the score of the second SCT is 50 points or above, she/he will be offered a grade. Should student accept this offered grade, she/he will be exempted from the end-term exam.

The offered grades are calculated by the following algorithm, based on the cumulative percentage points of the two SCTs (i.e. 200 points maximum).

110 - 129: pass (2)

130 - 149: satisfactory (3)

150 - 169: good (4)

170 - 200: excellent (5)

Those students who have not qualified for an offered grade must take the end-term exam during the exam period. The end-term exam consists of a written and an oral part.

"A" exam: To qualify for the oral part of an "A" exam, students must score higher than 70% on the written (entry) exam. Students who score less than 70% on the written part will fail (thus, the oral exam will not take place).

"B" exam: "B" exams are identical to "A" exams except when the student failed the oral, but not the written, part of the "A" exam. With a score of higher than 70% on the written part of the "A" exam, the student is exempt from the written exam on the "B" exam.

"C" exam: "C" exams are oral exams only, without a written entry test.

Those students who would like to improve the grade of a successful ("A" or "B" exam) or do not accept the offered grade, are also exempted from the entry test.

The list of exam topics is available on the departmental website (www.elearning.med.unideb.hu).

Lecture materials and other information concerning education can be found on our website at www.elearning.med.unideb.hu.

Gogolák P., Koncz G.: Short textbook of Basic Immunology.

Department of Laboratory Medicine

Subject: **CLINICAL BIOCHEMISTRY AND PATHOMECHANISMS OF DISEASES II.**

Year, Semester:

Number of teaching hours:

Lecture: **56**

Seminar: **8**

Practical: **14**

1st week:

Lecture: 1. Coagulopathies, (general introduction), haemophilias, other coagulopathies

2. von Willebrand disease

3. Platelet function disorders

Clinical physiology: Introduction, cellular and molecular factors of pathologic cardiac excitability.

Practical: Laboratory diagnostics of coagulopathias

2nd week:

Lecture: 4. Inherited thrombophilias

5. Acquired thrombophilias

6. Prethrombotic state, thromboembolias,

consumption coagulopathies

Clinical Physiology: Pathologic contractile function of the heart (contractile proteins, intracellular Ca²⁺-homeostasis and cardiac pumping)

3rd week:

Lecture: 7. Disorders of sodium and water metabolism I.

8. Disorders of sodium and water metabolism II.

9. Disorders of potassium metabolism

Clinical Physiology: Myocardial ischemia, myocardial infarction and new ischemic syndromes (hibernation, preconditioning, stunning)

Practical: Laboratory diagnostics of platelet functions disorders. Laboratory monitoring of antiplatelet therapy.

4th week:

Lecture: 10. Patobiochemistry of the renal function I.

11. Patobiochemistry of the renal function II.

12. Laboratory diagnostics of renal disorders

Clinical Physiology: Cardiac hypertrophy and failure.

Practical: Laboratory diagnostics of Thrombophilia. Laboratory monitoring of anticoagulant therapy.

5th week:

Lecture:

13. Disturbances of the acid-base balance

14. Laboratory diagnosis of autoimmune diseases.

15. Laboratory diagnostics of muscle disorders.

Clinical Physiology: Heart failure (molecular pathophysiology)

Practical: Laboratory diagnostics of renal disorders

6th week:

Lecture: 16. Pathogenesis and pathomechanism of diabetes mellitus

17. Pathobiochemistry and clinical biochemistry of the acute complications of diabetes mellitus

18. Laboratory diagnostics of diabetes mellitus

Clinical physiology: Endothelium, smooth muscle, vessels.

Self Control Test

7th week:

Lecture: 19. Disorders of lipid metabolism.

20. Laboratory diagnostics of hyperlipidemia

21. Risk factors of atherosclerosis

Clinical physiology: Hypertension

Practical: Basic laboratory methods in metabolic diseases

8th week:

Lecture: 22. Laboratory diagnostics of acute

coronary syndrome I.

23. Laboratory diagnostics of acute coronary syndrome II.

24. Laboratory diagnostics of hyperuricaemia and gout.

Clinical Physiology: New translational perspectives in cardiovascular medicine.

9th week:

Lecture: 25. Pathobiochemistry of liver disorders

26. Laboratory diagnostics of liver disorders. P atobiochemistry of acute hepatic disorders.

27. Pathobiochemistry and laboratory diagnostics of cholestasis and cirrhosis.

Clinical Physiology: New challenges in Cardiology, stem cells, COVID-19 and artificial intelligence

Practical: Laboratory diagnostics of myocardial infarction, POCT.

10th week:

Lecture: 28. Pathobiochemistry and laboratory diagnosis of autoimmune liver diseases

29. Pathobiochemistry and laboratory diagnostics of the gastrointestinal tract I.

30. Pathobiochemistry and laboratory diagnostics of the gastrointestinal tract II.

Clinical Physiology: Cellular and molecular elements of the respiratory system with clinical significance.

Seminar: Clinical Physiology: The basics of EKG.

Self Control Test

11th week:

Lecture: 31. Laboratory diagnostic of acute pancreatitis

32. Clinical biochemistry of hypothalamus and hypophysis

33. Pathobiochemistry of thyroid disorders.

Seminar: Clinical Physiology: ECG diagnosis of arrhythmias I.

12th week:

Lecture: 34. Laboratory diagnostics of thyroid functions.

35. Clinical chemistry of parathyroid disorders. Disorders of calcium, phosphate and magnesium metabolism.

36. Patobiochemistry and laboratory diagnostics of adrenal cortex disorders.

Clinical Physiology: Clinical physiology of nutrition and metabolism.

Seminar: Clinical physiology: ECG diagnosis of arrhythmias II.

13th week:

Lecture: 37. Pathobiochemistry and laboratory diagnostics of adrenal medulla disorders.

38. Clinical biochemistry of gonadal functions.

39. Laboratory diagnostics of bone disorders.

Clinical Physiology: Clinical physiology of the nervous system I.

Seminar: Clinical Physiology: Angina pectoris, myocardial

Practical: Laboratory evaluation of liver and pancreas function

Self Control Test

14th week:

Lecture: 40. Summary of laboratory methods.

41-42: Demonstration of practical pictures.

Clinical Physiology: Clinical physiology of the nervous system II.

Requirements

Participation on practicals: Attendance of practicals is obligatory. Altogether one absence in the first semester and one absence in the second semester is permitted. two absences in the second semester are permitted. In case of further absences, the practicals should be made up for by attending the practicals with another group in the same week, or a medical certificate needs to be presented. Please note that strictly only a maximum of 2 students are allowed to join another group to make up for an absence.

Requirements for signing the Lecture book: The Department may refuse to sign the Lecture book if the student is absent from practicals more than allowed in a semester.

Assessment: At the end of the second semester there is a written examination assessed by the five-grade evaluation. During the second semester there will be 3 SCTs. Bonus percentage will be given on the basis of the results of the SCTs, which will be added to the result of the final exam. The Clinical Biochemistry II. final exam will be a written test from the material of the I. and II. semester and clinical physiology (aok.unideb.hu/klinfiz). The materials of Clinical Biochemistry subject are uploaded on the e-learning website.

Requirements for examinations: The examination is based on the lecture and practical material (Practicals in Laboratory Medicine, eds.: János Kappelmayer, 2023) as well as the relevant chapters from the textbook of Marshall: Clinical Chemistry (9th edition, 2021).

Department of Pathology

Subject: **PHARMACEUTICAL PATHOLOGY II.**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **14**

Seminar: **14**

1st week:

Lecture: Cardiovascular diseases

2nd week:

Lecture: Diseases of the respiratory system

3rd week:

Lecture: Diseases of the head and neck region

4th week:

Lecture: Pathology of the GI-tract

5th week:

Lecture: Diseases of the liver pancreas

6th week:

Lecture: Kidney and urinary tract pathology

7th week:

Lecture: Prostate and male genital tract disorders

8th week:

Lecture: Disorders of the female genital tract

9th week:

Lecture: Fetal and neonatal pathology

10th week:

Lecture: Pathology of the breast

11th week:

Lecture: Endocrine disorders

12th week:

Lecture: Dermopathology

13th week:

Lecture: Disorders of the breast

14th week:

Lecture: Test exam

Department of Pharmaceutical Technology

Subject: **PHARMACEUTICAL TECHNOLOGY PRACTICE III. (INDUSTRIAL PRACTICE II.)**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Practical: **56**

1st week:

Practical: Dialysis. Solutions for dialysis. perfusion solutions. Eye drops. Eye creams.

2nd week:

Practical: Soutio pro dialysi peritoneale I. (Ph.Hg.VII.)

Solutio anticoagulans "ACD" (Ph.Hg.VII.)

3rd week:

Practical: Collins "C" solution
Kardiostop I. solution

4th week:

Practical: Oculogutta neomycini (FoNo.VII.).
Oculentum simplex (Ph.Hg.VII.).
Oculentum hydrosum (Ph.Hg.VII.)
Oculentum neomycini FoNo VII.

5th week:

Practical: Test from infusions and eye preparations.

6th week:

Practical: High-shear granulation.

7th week:

Practical: Fluid bed granulation.

8th week:

Practical: Hard gelatin capsules, capsule filling and pharmacopoeial tests.

9th week:

Practical: Tablet compression, process parameters and tablet qualification.

10th week:

Practical: Test from tableting.

11th week:

Practical: Semisolid dosage forms '3. Suspension type ointments Pastes. Formulation techniques, equipment.

12th week:

Practical: Solid dosage forms '1. Combined suppository bases. Aims and formulation techniques, equipment.

13th week:

Practical: Solid dosage forms '2. Suppository formulation in industrial scale. Aims and formulation techniques, equipment.

14th week:

Practical: Cosmetics. Aim, possibilities and formulation techniques, equipment. Test.

Requirements

The course consists of 3 parts (solid preparations, galenic preparations and aseptic preparation), each of which lasts 4 weeks. The course is taught in small groups in order to improve manual skill and understanding. During the semester, students will fulfil the three parts according to a schedule prepared by themselves and approved by the instructors.

The condition for participation in the course is to present a document proving a valid medical suitability check. The examination is the same as the examination required for participation in the summer practices. Sick students cannot start the practice and they must report their condition to the instructors in advance.

No student can start a given practice if the clothing is inappropriate (wearing of a lab coat and a change of footwear is mandatory). Attendance is compulsory and any absences must be excused to the relevant instructor no later, than the next practice. Maximum two absences are allowed, but the completion of the missed practices is compulsory. These may be made at a time agreed with the instructor of the given part within the limits of the timetable. In case of more than two unexcused absences, the semester will not be signed.

The three parts of the practical training will be evaluated at the same time, on the 13th week and attendance is compulsory. Students will write three independent papers from the three parts. In all cases (including those writing an improvement paper), the final mark is the mean of the marks of all the papers, rounded up to the nearest whole number. If the mark for any test is unsatisfactory (1), writing of an improvement is compulsory on the 14th week. The improvement paper will be graded in the same way as the first paper. If the mark for the improvement test is unsatisfactory, the course

is considered failed, and the final mark is unsatisfactory (1). Students who wish to improve their marks can also write voluntarily an improvement test but only from the three parts together. They must notify the tutors no later than the beginning of the 14th week of the semester.

Subject: PHARMACEUTICAL TECHNOLOGY PRACTICE III. (PRESCRIPTION WRITING III.)

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Practical: **56**

1st week:

Practical: Introduction, general information.
Labour safety, laboratory regulations.
Requirements.

2nd week:

Practical: Preparation of pastes. Sparsorium.
• Pasta boraxata FoNo VIII.
• Pasta antirheumatica FoNo VIII.
• Sparsorium infantum FoNo VIII.
• Sparsorium antimyoticum FoNo VIII.

3rd week:

Practical: Vaginal dosage forms (ovulum, globulus, globulus vaginalis longiformis).
Preparation of suppositories by the help of cold compression with Theobroma oil.

4th week:

Practical:
• Ovulum nystatini FoNo VIII.
• Globulus metronidazoli compositus FoNo VIII.
• Laxative suppository (individual composition)
-NaHCO₃ 1,60 g; Acidum tartaricum 1,60 g;
Butyrum cacao 18,0 g
• Mixtura pectoralis FoNo VIII. adde Dionin

5th week:

Practical: Divided powders.

6th week:

Practical: Test 1.
• Pulvis asthmalyticus FoNo VII.
• Pulvis expectorans FoNo VII.
• Pulvis antispasmodoloricus FoNo VIII.

7th week:

Practical: Incompatibilities.

8th week:

Practical:
• Incompatibility 1. 20,0 g
• Incompatibility 2. 150,0 g
• Incompatibility 3. 30,0 g
• Incompatibility 4. (for 10 powders)

9th week:

Practical: Ointments.

10th week:

Practical: Easter holiday.

11th week:

Practical:
• Unguentum antirheumaticum FoNo VIII.
• Unguentum cholesterinatum pro infante FoNo VIII.
• Unguentum haemorrhoidale FoNo VIII.
• Unguentum infantum FoNo VIII.

12th week:

Practical: Test 2.
Suppositories.

13th week:

Practical:
• Suppositorium ad nodum FoNo VIII.
• Suppositorium paracetamoli 60 mg FoNo VIII.
• Incompatibility in suppository - Suppositorium anodynum FoNo VI. (Codein 0,24 g; Aspirin

3,00 g; Adeps solidus 3 instead of Adeps solidus 50)

14th week:
Practical:

- Pulvis combinatus FoNo VIII.
- Cremor aquosus FoNo VIII.
- Unguentum keratolyticum FoNo VIII.
- Suppositorium analgeticum forte FoNo VIII.

Requirements

Active participation in pharmaceutical technology lab sessions is mandatory. Attendance at lab sessions will be monitored. Absences must be justified. Make-up lab sessions are mandatory and may be scheduled at a time agreed upon with the lab instructor; during the regular semester, a maximum of two lab sessions may be made up. More than two unexcused absences or unfulfilled labs will result in the denial of the semester signature.

Students must arrive at the practical sessions prepared; before the session begins, they must present the lab report on that day's preparations to the instructor; until then, the student may not begin the session. Instructors will explain the formal and content requirements for the reports at the beginning of the semester. During the practical sessions, everyone must keep a record in their lab report, which must be submitted to the lab instructor at the end of each session along with the prepared formulations; this is a prerequisite for successfully completing the lab session.

Performance in pharmaceutical technology is graded on a five-stage practical scale. Requirements for earning a passing grade in the practical component:

Two major written exams are held during the semester. A passing grade requires 60% of the total points, but errors due to a lack of basic knowledge (mistakes in units of measurement, dosage errors, or medication exchanges) are not permitted. Students who receive a failing grade are given one opportunity to rewrite the major written exam to correct their work. By the end of the semester, no grade for any of the major written exams may be a failing (1). If one or both grades are a failing (1), we will refuse to sign the semester.

The preparation of the pharmaceutical formulations specified in the schedule is mandatory; deviations from this are permitted only in exceptional, justified cases with the instructor's permission. During the semester, at least 4 of the formulations prepared by each student will be checked by weight. Any preparation that receives a failing grade must be remade.

At the beginning of the lab sessions, students may be tested on unit conversions, concentration calculations, Latin abbreviations, terminology, terms referring to the effects of medications, and commonly used synonyms. If the assignment is error-free, extra points may be earned on the next major written exam.

A mandatory weekly written test covers the physical and chemical properties, pharmacological effects, and pharmaceutical applications of the active and excipient ingredients used in that day's lab session. Students must score at least 40% on this material knowledge assessment; otherwise, they cannot begin the lab session.

During the semester, as specified in the schedule, students will be required to prepare medications independently and take an oral exam on the related theoretical knowledge; these will be graded in every case. Students must correct any unsatisfactory independent medication preparation.

The grade for the prescription preparation course is calculated as the average of 1A + 1B + 2 + 3 + 4, where: 1A and 1B are the two major written exams; 2 is the average of the essays written at the

beginning of the course; 3 is the individual medication preparation; and 4 is the average of the weight checks.

Subject: **PHARMACEUTICAL TECHNOLOGY THEORY IV.**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Generations of pharmaceutical formulations. Introductory lecture on therapeutic systems. Application of polymers in pharmaceutical technology. Definitions. Therapeutic goals. Methods for prolonging the active ingredient's duration of action. Therapeutic procedures, technological possibilities. Advantages, disadvantages. Classifications.

2nd week:

Lecture:
Bioavailability (absolute, relative) The in vitro methods of releasing the active ingredient. In vitro/in vivo correlation, dissolution studies, tools.

3rd week:

Lecture:
Nasal and inhalation therapeutic systems.

4th week:

Lecture:
Passive and active targeting.
Microencapsulation /molecular encapsulation/, nanocarriers. Microemulsions. Liposomes, structure of liposomes, production.
Pharmaceutical liposomes. New possibilities in drug development.

5th week:

Lecture:
Parenteral therapeutic systems

6th week:

Lecture:
Oral therapeutic systems I., II.

7th week:

Lecture:
Comparison between original and generic drugs.

8th week:

Lecture:
Transdermal therapeutic systems.

9th week:

Lecture:
Pharmaceutical technology aspects of orally disintegrating tablets, development opportunities.

10th week:

Lecture:
Special ophthalmic preparations. Ophthalmic therapeutic systems.

11th week:

Lecture:
Fundamentals of Biotechnological Drug Development. Drugs produced by biotechnological processes. Biological therapeutic systems.

12th week:

Lecture:
Stability of drugs. Basic concepts of reaction kinetics and their application in pharmaceutical technology. Accelerated stability studies. Storage of drugs and pharmaceutical preparations, factors affecting shelf life. Materials for drug storage.

13th week:

Lecture:
Bioequivalent and biosimilar drugs.

14th week:

Lecture:

Consultation

Requirements

Students have to attend 30% of the lectures.

Requirements for signing the Lecture book: The Department may refuse to sign the subject if the student didn't attend 30% of lectures according to attendance list.

At the end of semester students have oral exam. The prerequisite of oral exam is a written test before exam. If student doesn't write more than 60% and fail the written test, it is prohibited to take an oral exam and get a fail (1) mark.

Department of Pharmacodynamics

Subject: **PHARMACEUTICAL INFORMATICS**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Practical: **14**

1st week:

Practical: In general, about pharmacy informatics systems. General Legal Knowledge.

(Dispensing Function II.)

2nd week:

Practical: Introduction to the Hungarian Electronic Healthcare Services Space (EESZT) I.

7th week:

Practical: Pharmacy Information System I. (Practicing the Dispensing Functions)

3rd week:

Practical: Introduction to the Hungarian Electronic Healthcare Services Space (EESZT) II.

8th week:

Practical: Pharmacy Information System II. (Dispensing Function I.)

4th week:

Practical: Introduction to the Hungarian Electronic Healthcare Services Space (EESZT) III.

9th week:

Practical: Pharmacy Information System II. (Dispensing Function II.)

5th week:

Practical: Pharmacy Information System I. (Dispensing Function I.)

10th week:

Practical: Pharmacy Information System II. (Practicing the Dispensing Functions)

6th week:

Practical: Pharmacy Information System I.

11th week:

Practical: Pharmacy Information System III. (Dispensing Function I.)

12th week:

Practical: Pharmacy Information System III.

(Dispensing Function II.)

13th week:

Practical: Pharmacy Information System III.
(Practicing the Dispensing Functions)

14th week:

Practical: Practical exam

Requirements

A maximum of two absences is permitted during the semester. The semester ends with a practical exam. Successful completion of the practical exam is a requirement for passing the semester. The practical grade is based on the result of the practical exam.

Subject: **PHARMACOPOEIAL AND R&D ANALYSIS OF ACTIVE PHARMACEUTICAL INGREDIENTS AND PHARMACEUTICAL FORMS I.**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **28**

Seminar: **14**

1st week:

Lecture: Introduction, announcement of requirements.

Seminar: Introduction, announcement of requirements.

2nd week:

Lecture: Collection and storage of biological samples, sample preparation-I.

Seminar: units, conversion

3rd week:

Lecture: Sample preparation-II.

Seminar: Pharmaceutical samples, sampling methods.

4th week:

Lecture: Pharmacopoeial identification tests and assays. Control of impurities in substances for pharmaceutical use.

Seminar: Calculation of concentration, dilution, preparation of stock solution.

5th week:

Lecture: Identification and control of residual solvents, hazard classification of solvents and

chemicals

Seminar: calculation of concentration, dilution, preparation of stock solution.

6th week:

Lecture: Pharmacopoeial physical and physico-chemical methods I.

Seminar: Calibration.

7th week:

Lecture: Pharmacopoeial physical and physico-chemical methods II.

Seminar: Practical tasks.

8th week:

Lecture: Pharmacopoeial physical and physico-chemical methods III.

Seminar: Practical tasks.

9th week:

Lecture: Pharmacopoeial physical and physico-chemical methods IV.

Seminar: Practical tasks.

10th week:

Lecture: Pharmacopoeial physical and physico-

chemical methods V.
Seminar: Practical tasks.

11th week:

Lecture: Physical/chemical control methods of pharmaceutical technology I.
Seminar: Practical tasks.

12th week:

Lecture: Physical/chemical control methods of pharmaceutical technology II.

Seminar: Environmental effects of drugs and degradation products.

13th week:

Lecture: Validation, system suitability.
Seminar: Consultation.

14th week:

Lecture: Test
Seminar: Test

Requirements

At least 30% of the lectures must be visited. A maximum of 3 absences from the seminars are permitted. At the end of the semester it is possible to get an offered grade. The presence at the final test is mandatory! The requirement for getting signature is the perfect completion of the calculation part of the test. Additional minimal requirements for offered grade are 60% completion of the theoretical part and 75% of the seminar part. The exam will be in written with the same requirements.

CHAPTER 19

ACADEMIC PROGRAM FOR THE 4TH YEAR

Department of Biopharmacy

Subject: **PHARMACEUTICAL BIOANALYTICS AND BIOTECHNOLOGY I.**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Modern biotechnology (history, basic concept)

2nd week:

Lecture: Biotechnology methods and biotechnology products in therapy

3rd week:

Lecture: Production of biotechnological drugs I.: fermentation

4th week:

Lecture: Production of biotechnological drugs II.: recombinant technology, GMO

5th week:

Lecture: Gene technology I.: GH, insulin, enzymes, mABs, cytokines

6th week:

Lecture: Gene technology II.: vaccines, antibiotics

7th week:

Lecture: Gene technology III.: gene therapy, personalized medication
1st self-control test

8th week:

Lecture: Gene technology IV.: stem cells, stem cells in therapy, cell banks

9th week:

Lecture: Gene technology V.: pharmacogenetics, pharmacogenomics, HGP, ENCODE project

10th week:

Lecture: Modern drug delivery systems, nano and biotechnology based therapies

11th week:

Lecture: Biotechnology based targeted (cancer) therapies

12th week:

Lecture: Industrial production: documentation, QA, QC, validity

13th week:

Lecture: Regulation, biosimilar products, FDA/EMA regulation. Ethics of biotechnology, future directions

14th week:

Lecture: 2nd self-control test

Requirements

Attendance of 30% of the lectures is compulsory. If the student fails to attend at least 30% of the lectures according to the attendance list, the signature for closing the semester will be refused.

The lecture will not be held if 5 or less students attend the lecture, but the material to be delivered in the lecture concerned will form part of both the written and the oral examination material.

At the end of the semester, the examination in Pharmaceutical Bioanalytics and Biotechnology I.

will be a compulsory oral colloquium.

During the semester there will be 2 compulsory, written self-control tests from the lectures. The students will receive a grade based on the average of the two tests, which will be included in the colloquium grade. The grade ranges are: 0–59% - failed (1), 60–69% - passed (2), 70–79% - satisfactory (3), 80–89% - good (4), 90–100 % - excellent (5). In the colloquium, students have to choose 2 topics, and the result of the oral examination plus the grade for the written tests will be added together to give the final colloquium grade. If the student achieves at least 80% in both tests (not on average but each of them), students are offered a grade calculated from the two self-control tests and the oral examination may be substituted (80–89%: good (4), 90–100%: excellent (5)).

Department of Clinical Basics

Subject: **CLINICAL BASICS I.**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

Seminar: **14**

1st week:

Lecture: Neurology 1.

2nd week:

Lecture: Neurology 2.

3rd week:

Lecture: Psychiatry 1.

4th week:

Lecture: Psychiatry 2.

5th week:

Lecture: Emergency care

6th week:

Lecture: Pediatrics 1.

7th week:

Lecture: Pediatrics 2.

8th week:

Lecture: Ophthalmology

9th week:

Lecture: Dermatology

10th week:

Lecture: Immunology

11th week:

Lecture: Cardiology 1.

12th week:

Lecture: Hypertonia

13th week:

Lecture: Cardiology 2.

14th week:

Lecture: Consultation

Seminar: Self Control Test

Department of Medical Microbiology

Subject: **MEDICAL MICROBIOLOGY I.**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

Seminar: **10**

Practical: **10**

1st week:

Lecture: The microbial world. Pharmaceutical importance of microbes. Prokaryotic cell structure.

Practical: Laboratory safety instructions.

Bacterial normal flora. Collection of clinical samples, sample processing.

2nd week:

Lecture: Morphology and physiology of bacteria. Pathogenesis and infection. Bacterial genetics.

Practical: Examination of microscopic morphology of bacteria. Microscopic techniques (dark field and phase contrast microscope, electron microscopy). Unstained specimens. Staining methods (Gram-, Ziehl-Nielsen and Neisser- staining).

3rd week:

Lecture: Host defenses against bacterial infections. Immunological basis of vaccination.

Practical: Culture techniques (culture conditions, media, colony morphology). Identification of bacteria (examination of biochemical activity). Diagnosis of anaerobic infections.

4th week:

Lecture: Passive and active immunization. Immunoglobulins. Vaccines.

Practical: Immunoserological methods in microbiological diagnosis (precipitation, agglutination, complement fixation, ELISA and western-blot).. Molecular diagnostic methods.

5th week:

Lecture: Principles of antibacterial chemotherapy, major groups of antibiotics and their mechanism

of action. Mathematical description of the antibiotic effect. Antibiotic policy.

Practical: Methods for testing antibiotic susceptibility. Examination of antibiotic interactions.

6th week:

Lecture: Gram-positive cocci and rods. Gram-negative cocci. Acid-fast bacteria

Practical: Development and clinical trial of antibiotics.

7th week:

Lecture: Gram-negative coccobacilli. Gram-negative rods. Curved rods.

Seminar: Diagnosis of enteric bacterial infections.

8th week:

Lecture: Mycoplasmas and obligatory intracellular bacteria. Spirochaetes.

Seminar: Bacterial respiratory infections. Antituberculous agents.

9th week:

Lecture: Cell wall synthesis inhibitors.

Seminar: Bloodstream infections. Bacterial meningitis.

10th week:

Lecture: Protein synthesis inhibitors.

Seminar: Urinary tract infections. Bacterial sexually transmitted diseases (STD)

11th week:

Lecture: Antibiotics interfering with nucleic acid metabolism and antimetabolite antibiotics.

Seminar: Antibacterial agents for the treatment of meningitis and urinary tract infections.
Antibiotics against anaerobic bacteria.

12th week:

Lecture: Fungal cell structure, physiology, virulence.
Seminar: Types and mechanisms of clinically relevant antibiotic resistance.

13th week:

Lecture: Antifungal agents. Medically important fungal pathogens.
Seminar: Diagnosis of fungal infections.

14th week:

Lecture: Normal flora. Pre-, pro- and synbiotics.
Seminar: Antimicrobial agents in clinical practice.

Requirements

Participation in the practical courses and seminars is obligatory. The Department may refuse to sign the students' Lecture book if they are absent from more than two practices or seminars in a semester.

At the end of 1st semester the student is required to take an end-semester examination based on the whole material of the lectures, practices and seminars of the semester. The examination consists of a written test and an oral examination.

Department of Pharmaceutical Surveillance and Economics

Subject: **INTRODUCTION TO FINANCIAL MANAGEMENT FOR PHARMACISTS**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **14**

Seminar: **14**

1st week:

Lecture: Models and the key elements of micro-economy, specific aspects of a market on price related to product characteristics and demand.
Market equilibrium, Marshall cross.

2nd week:

Lecture: Consumer decisions, changes in demand and supply, issues of income and elasticity. Market situation, analysis of excess demand, excess supply.

3rd week:

Lecture: Principles and practice of financial calculations, cost, revenue, profit, expected

return, NPV, return. Participants in macroeconomics: mechanisms of business operations, return, cash flows, cash-flow, purpose of business planning.

4th week:

Lecture: Characteristics of the drug as a special commodity. Access. Characteristics of pharmacy drug and commodity groups.

5th week:

Lecture: Economic conditions of the operation and financing of the enterprise. Revenues and expenses. Taxes, contributions and costs. Management, operation and development issues.

6th week:

Lecture: The budget line, the calculation bases of optimization. The basics and practice of cash-flow planning. The mechanisms of business operation. The purpose of business planning.

7th week

Lecture: The pharmacy as a business: annual operating costs and revenues. Income statement, balance sheet and annual reporting obligations. Financial planning, investment return planning. Basics of corporate management and business calculations: revenues, expenses.

8th week:

Seminar: Planning and practice of pharmacy expenses and revenues. Planning of the product group and product portfolio.

9th week

Seminar: Factors influencing pharmacy efficiency, economics of value-added services. Calculation of the return on investment of a new pharmacy service.

10th week

Seminar: Basics of business planning, development and return on investment planning.

Goals, costs and investment. Calculation basics of optimization.

11th week

Seminar: Fundamentals of macroeconomics. Domestic and international money and commodity markets.

12th week

Seminar: The interface between the labor market and the economy and its evaluation. Human resource management: recruitment, job descriptions, motivation and salary management issues and pharmacy practice.

13th week

Seminar: The concepts of consumption, demand, goods market, unemployment, GDP, GNP, CPI. Monetary and fiscal policy instruments. The role of state intervention: taxation and interest rates. The development of economic thinking.

14th week

Seminar: The practice of financial planning. Consultation and presentation of practical examples.

Requirements

Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.

Participation in at least three (3) of 6 interim tests are required for the signature. Those ones who failed will be required to pass the "semifinal test" in order to obtain signatures.

Exam (semifinal, kollokvium)

The exam will be written and oral exam at the end of the semester which covers all the topics of the semester. Written part: Test and three topics from selected list of questions provided.

Grade (semifinal mark) The average of the three scores (Test, Topics) compose the final mark (1-5 grades).

Department of Pharmaceutical Technology

Subject: **INDUSTRIAL PHARMACEUTICAL TECHNOLOGY PRACTICE**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Design of controlled environments, monitoring and data-driven control

2nd week:

Practical: Application and quality control of controlled production conditions

3rd week:

Practical: Application of GCP and GLP guidelines in practical drug development and manufacturing control

4th week:

Practical: Development and testing of innovative drug delivery systems

5th week:

Practical: Advanced sample preparation with robotic systems

6th week:

Practical: Ex vivo and in vivo preclinical studies

7th week:

Practical: Legal environment for the

authorisation of food supplements and medicines at national and community level

8th week:

Practical: EMA GMP Manufacturing Requirements Itemized Review

9th week:

Practical: Pharmaceutical Exhibitions

10th week:

Practical: Comparison of pharmaceutical and food law standards.

11th week:

Practical: Project Assignment

12th week:

Practical: Project Assignment

13th week:

Practical: Project Assignment

14th week:

Practical: Consultation.

Requirements

Attendance at practice is obligatory. At the end of semester students get a 5 stage grade.

Subject: **INDUSTRIAL PHARMACEUTICAL TECHNOLOGY THEORY**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

Industrial Pharmaceutical Technology theory

1. block

Filtration of liquids
Sterilization
Liquid Forms II.
Preparation of liquid forms
Filling of liquid form

2. block

Objectives of industrial drug formulation
Regulatory and quality assurance
GMP
Industrial scaleup

3. block

Semi-Solid Forms II.
Transdermal systems
Suppositories
Design of production plants
Treatment of working atmospheres
Filtration of working atmospheres
Iso-technology
Packaging

4. block

Solid Forms I.
Mixing process
Solid Forms II:
Conversion into dosage form.
Semi-Solid Forms I.
Soft gelatin capsules

5. block

Dissolution
Lyophilization
Liquid Forms I.
Content of liquid forms
Materials of containers for liquid forms

Department of Molecular and Nanopharmaceutics

Subject: **NANOTECHNOLOGY**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: Introduction. Nanotechnology and Nanomedicine. Methods for the characterization of nanotechnology and nanodrugs.

2nd week:

Lecture: Liposomes 1.

3rd week:

Lecture: Liposomes 2.

4th week:

Lecture: Nanoparticles 1.

5th week:

Lecture: Nanoparticles 2.

6th week:

Lecture: Unimolecular polymer and dendrimer conjugates. Micellar systems, polymeric micelles.

7th week:

Lecture: Antibodies and their conjugates.

8th week:

Lecture: Application of macrocyclic compounds: cyclodextrins, calixarenes, pseudopolyrotaxanes, polyrotaxanes.

9th week:

Lecture: Nucleic acid delivery vectors. Vaccines.

10th week:

Lecture: Theranostics.

11th week:

Lecture: Cellular internalization and intracellular behaviour of nanodrugs.

12th week:

Lecture: Pharmacokinetics and toxicology of nanodrugs.

13th week:

Lecture: Regulatory and marketing aspects of nanodrugs.

14th week:

Lecture: Consultation.

Requirements: Attendance at a minimum of 30% of lectures is mandatory.

Examination: Written test, a minimum score of 60% is required to pass.

Department of Pharmacodynamics

Subject: **PHARMACOLOGY PRACTICE I.**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Seminar: **42**

Practical: **14**

1st week:

Seminar: 1. Narcosis. General anesthetics (PK, dose). Description of requirements

Practical: Narcosis. General anesthetics (PK, dose).

2nd week:

Seminar: 1. Perception of pain. Pain management. Opioid analgesics and antagonists (PK, dose).

2. Local anesthetics (PK, dose).

Practical: Pharmacokinetic model systems

3rd week:

Seminar: Drugs of abuse; tolerance, dependence. Ethanol. Methanol.

Central and peripheral acting antitussive agents.Expectorants (PK, dose).

Practical: Central and peripheral acting antitussive agents.Expectorants (PK, dose). Ethanol, methanol (PK)

4th week:

Seminar: 1. Central and periferal skeletal muscle relaxants(PK, dose).

2. Antimanic agents. Antidepressants(PK, dose).

Practical: 1. Central and periferal skeletal muscle relaxants(PK, dose).

2. Antimanic agents.Antidepressants(PK, dose).

5th week:

Seminar: 1. Sedatohypnotics. Anxiolytics.(PK, dose).

2.Antiepileptics (PK, dose).

Practical: 1. Sedatohypnotics. Anxiolytics.(PK, dose).

2.Antiepileptics (PK, dose).

6th week:

Seminar: 1.Antipsychotics. Antiepileptics (PK, dose).

2. Pharmacologic management of Parkinsonism, Drugs used in Alzheimer's Disease. Therapy of migraine (PK, dose).

Practical: 1.Antipsychotics. Antiepileptics (PK, dose).

2. Pharmacologic management of Parkinsonism, Drugs used in Alzheimer's Disease. Therapy of migraine (PK, dose).

7th week:

Seminar: 1. Cholinerg-activating drugs.

Cholinoceptor-blocking drugs(PK, dose).

2. Pharmacology of smooth muscle(PK, dose).

Practical: 1. Cholinerg-activating drugs.

Cholinoceptor-blocking drugs(PK, dose).

2. Pharmacology of smooth muscle(PK, dose).

8th week:

Seminar: Adrenergic transmission - sympathomimetics sympatholytics(PK, dose).

Practical: Adrenergic transmission - sympathomimetics sympatholytics(PK, dose).

9th week:

Seminar: 1. Non-adrenerg, non-cholinerg transmission. The role of adenosine and nitrogen-monoxyd in transmission

2. Self control test I.

Practical: Self control test I.

Self Control Test

10th week:

Seminar: 1. Agents used in cardiac arrhythmias(guidelines, PK, dose).

2. Hypoxia-reperfusion induced damage (AP, ionchannels, ECG)

Practical: 1.Agents used in cardiac arrhythmias(guidelines, PK, dose).

2. Hypoxia-reperfusion induced damage (AP, ionchannels, ECG)

11th week:

Seminar: 1.Myocardial ischemia, antianginal drugs(guidelines, PK, dose).

2. Antihypertensive agents (guidelines, PK, dose).

Practical: 1.Myocardial ischemia, antianginal drugs(guidelines, PK, dose).

2. Antihypertensive agents (guidelines, PK, dose).

12th week:

Seminar: 1. Drugs used in heart failure (guidelines, PK, dose).
2. Diuretics and antidiuretics (guidelines, PK, dose).

Practical: 1. Drugs used in heart failure (guidelines, PK, dose).
2. Diuretics and antidiuretics (guidelines, PK, dose).

13th week:

Seminar: 1. Ocular pharmacology (guidelines, PK, dose).

2. Skin pharmacology (guidelines, PK, dose).

Practical: 1. Ocular pharmacology (guidelines, PK, dose).

2. Skin pharmacology (guidelines, PK, dose).
Drugs used in dyslipidemia (guidelines, PK, dose).

14th week:

Seminar: General consultation.

Self control test (drugs, state exam questions) II.

Practical: General consultation.

Self control test (drugs, state exam questions) II.

Self Control Test

Requirements

During the semester, there are 2 written assessments of the semester's material, in which participation is mandatory. The average of the two assessments must be at least 50% in order for the semester to be accepted and for the student to be admitted to the exam. Below 50%, there is no possibility of improvement, we refuse to sign the semester, the student's semester is unsuccessful. Participation in the seminars is mandatory, in case of more than four absences, the semester signature is excluded. In addition to the theoretical assessment, the students write 2 tests based on the pre-specified active ingredients and the state exam tests. Practice grade is calculated based on: $\frac{1}{3} + \frac{1}{3}$ theoretical self control test and $\frac{1}{3}$ as the average of seminar self control tests (drug lists and state exam questions). In the case of grades calculated as four (minimum 80%) and five (minimum 90%) from the average of the 2 written exam, 2 topics will be asked on the final exam. Between fifty and sixty percent must be taken oral exam from the entire curriculum material of the semester during the last week of the semester.

Subject: **PHARMACOLOGY THEORY I.**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **56**

1st week:

Lecture: 1. Introduction to pharmacology of CNS drugs. Neurotransmission in the CNS.

2. Narcosis. General anesthetics.

2nd week:

Lecture: 1. Local anesthetics.

2. Perception of pain. Pain management. Opioid analgesics and antagonists.

3rd week:

Lecture: 1. Drug addict, tolerance, dependence

2. Central and peripheral acting antitussive agents. Expectorants.

4th week:

Lecture: 1. Central and peripheral skeletal muscle relaxants.

2. Antidepressants. Antimanic agents.

5th week:

Lecture: 1. Anxiolytics. Sedative hypnotics

2. Antiepileptics.

6th week:

Lecture: 1. Antipsychotics.
2. Pharmacologic management of Parkinsonism, Drugs used in Alzheimer's Disease. Therapy of migraine.

7th week:

Lecture: 1. Introduction to pharmacology of the vegetative nervous system. Cholinerg-activating drugs.
2. Cholinoceptor-blocking drugs. Pharmacology of smooth muscle

8th week:

Lecture: 1. Adrenergic transmission (sympathomimetics).
2. Adrenergic transmission (sympatholytics).

9th week:

Lecture: 1. Non-adrenerg, non-cholinerg transmission. The role of adenosine and nitrogen-monoxide in transmission
2. Self control test I.

Self Control Test

10th week:

Lecture: 1. Agents used in cardiac arrhythmias.
2. Renin-angiotensin system.

11th week:

Lecture: 1. Myocardial ischemia, antianginal drugs.
2. Antihypertensive agents.

12th week:

Lecture: 1. Drugs used in heart failure.
2. Diuretics and antidiuretics.

13th week:

Lecture: 1. Drugs used in dyslipidemia. 2. Ocular pharmacology. Skin pharmacology.

14th week:

Lecture: 1. General consultation.
2. Self control test II.

Self Control Test

Requirements

During the semester, there are 2 written assessments of the semester's material, in which participation is mandatory. The average of the two assessments must be at least 50% in order for the semester to be accepted and for the student to be admitted to the exam. Below 50%, there is no possibility of improvement, we refuse to sign the semester, the student's semester is unsuccessful. Participation in the seminars is mandatory, in case of more than four absences, the semester signature is excluded. In addition to the theoretical assessment, the students write 2 tests based on the pre-specified active ingredients and the state exam tests. Practice grade is calculated based on: 1/3+1/3 theoretical self control test and 1/3 as the average of seminar self control tests (drug lists and state exam questions). In the case of grades calculated as four (minimum 80%) and five (minimum 90%) from the average of the 2 written exam, 2 topics will be asked on the final exam. Between fifty and sixty percent must be taken oral exam from the entire curriculum material of the semester during the last week of the semester.

Subject: **PHARMACOPOEIAL AND R&D ANALYSIS OF ACTIVE PHARMACEUTICAL INGREDIENTS AND PHARMACEUTICAL FORMS II.**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

Practical: **42**

1st week:

Lecture: Introduction, announcement of requirements.

Practical: Introduction, announcement of requirements, safety rules and instructions.

2nd week:

Lecture: The fate of the drugs in the body, human drug metabolism.

Practical: according to the schedule

3rd week:

Lecture: Model systems of drug metabolism.

Practical: according to the schedule

4th week:

Lecture: Study CYP induction and inhibition.

Practical: according to the schedule

5th week:

Lecture: Measurement of drug protein binding.

Practical: according to the schedule

6th week:

Lecture: In vitro techniques in pharmacokinetic studies.

Practical: according to the schedule

7th week:

Lecture: Oxidative stress, antioxidant defense.

Practical: according to the schedule

8th week:

Lecture: Endogenous antioxidant/cytotoxicity assays.

Practical: according to the schedule

9th week:

Lecture: Exogenous antioxidant assays.

Practical: according to the schedule

10th week:

Lecture: Bioequivalence

Practical: according to the schedule

11th week:

Lecture: Biosensors

Practical: according to the schedule

12th week:

Lecture: Preclinical study design.

Practical: according to the schedule

13th week:

Lecture: Toxicological studies.

Practical: Consultation

14th week:

Lecture: Test

Practical: Test

Requirements

At least 30% of the lectures must be visited. Participation in the practicals is mandatory, 1 replacement is possible during the semester. Students must write a detailed lab-report. The reports will be evaluated the grade is one part of the final grade. At the end of the semester there will be a practical test and the participation is mandatory! Requirements of the signature are the perfect completion of the calculation, and min. 60% from the practical questions. The test result is also involved into the final grade. The final exam will be in oral.

Department of Public Health and Epidemiology

Subject: **PREVENTIVE MEDICINE AND PUBLIC HEALTH**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

Seminar: **24**

Practical: **4**

1st week:

Lecture: 1. The history, scope and methods of public health and preventive medicine, major public health issues in developing and developed countries

2. Introduction to human ecology

Seminar: 1-2. Demographical methods to study the health status of the population

2nd week:

Lecture: 3. Air pollution and health

4. Water pollution and health

Seminar: 3-4. Principles of prevention

3rd week:

Lecture: 5. Health hazards of ionising radiation and radioactive substances

6. Toxicology of organic solvents and pesticides

Seminar: 5-6. Occupational health and safety in pharmacist practice.

4th week:

Lecture: 7. Malnutrition, Nutritional deficiency diseases

8. Foodborne diseases, Diet related chronic diseases, Obesity

Seminar: 7-8. Financing the supply of medicines I.

5th week:

Lecture: 9. Health effect of noise and vibration

10. Heavy metals in the human environment

Seminar: 9-10. Financing the supply of medicines II.

6th week:

Lecture: 11. Global climate change and human

health

12. Public health consequences of substance abuse

Seminar: 11-12. Fundamentals of a healthy and sustainable diet

7th week:

Lecture: 13. Socioeconomic determinants of health, inequality and health

14. The effects of personal factors on health

Seminar: 13-14. Health promotion, Health education

8th week:

Lecture: 15. Introduction into the general epidemiology of non-communicable diseases

16. Epidemiology of mental diseases

Seminar: 15-16. Midterm test

9th week:

Lecture: 17. Epidemiology of neoplastic diseases

18. Epidemiology of cardiovascular diseases

Seminar: 17-18. Epidemiological measures and studies

10th week:

Lecture: 19. Epidemiology of skeletal and dental diseases

20. Epidemiology of chronic respiratory diseases

Seminar: 19-20. Preventive strategies

11th week:

Lecture: 21. Introduction into the general epidemiology of communicable diseases

22. Epidemiology of communicable diseases transmitted through the skin and sexually transmitted diseases

Seminar: 21-22. Reporting and control of communicable diseases, vaccination

12th week:

Lecture: 23. Epidemiology of nosocomial infections

24. Epidemiology of respiratory infectious diseases

Practical: 23-24. Global Burden of Disease database

13th week:

Lecture: 25. Epidemiology of viral hepatitis

26. Health policy principles

Seminar: 25-26. Sterilization and disinfection

14th week:

Lecture: 27. Health care systems of developed countries

28. Needs, demands and use of health services

Seminar:

Practical: 27-28. Hospital infection control

Requirements

Course requirements

Attendance at lectures is recommended, while attendance at seminars is compulsory. If a student misses more than two seminars, the academic advisor will refuse to sign the student's lecture book. In the 8th week of the semester, students are required to take a midterm test covering the material of the first 7 weeks. The grade received for the test is included in the average of the final exam grade. Students are provided with one opportunity to retake the written test for the purpose of repeating or improving the midterm assessment.

Students who actively participate in lectures are rewarded with bonus points, which improves the final exam grade. Before and after each lecture, students receive test questions related to the relevant topic. Bonus points are awarded to students who attend at least 50% of the lectures and answer at least 50% of the pre-lecture (PRE) and post-lecture (POST) questions correctly. Bonus points are only considered in the event of a successful exam, and their number increases in proportion to the percentage of correctly answered pre- and post-lecture questions as follows: 50%: 1 point, 60%: 2 points, 70%: 3 points, 80%: 4 points. Student attendance at lectures is recorded electronically. Lecture and seminar materials can be downloaded from www.elearning.med.unideb.hu

Requirements for the final exam:

Assessment is based on a five-grade scale. The final exam involves written and oral sections covering the topics of all lectures and seminars of the subject. The oral exam covers the topics of all seminars of the semester. The written exam consists of multiple-choice questions related to Environmental Health and Epidemiology. Each section is evaluated separately.

The final exam grade is determined by the number of the bonus points (B), the midterm test grade (M), the written exam grades (W1 and W2), and the oral exam grade (O). The exam result is considered failed if either part of the written (W1 or W2), or the oral grade (O), is failed. Students should repeat only that/those section/sections of the final exam that has/have been previously unsuccessful, while the grades of the successfully parts will be retained in determining the final examination grade.

Method of calculating the final grade: $(B+M+W1+W2+O)/4$

Type of exam: final exam after one semester (ESE)

Prerequisites: completion of immunology and clinical biochemistry II. subjects

Course description

The course covers the main areas of public health: environmental health including the health consequences of air and water pollution, occupational and nutritional health; the principles of epidemiology, the epidemiology and control of communicable and non-communicable diseases. Special attention is given on the main topics underlying nutritional disorders and deficiencies, health hazards of pharmacist' practice and preventive strategies.

Requirements

To acquire knowledge about the principles and the most important issues of environmental health, communicable and non-communicable diseases and health policy.

Methods of education

The education of the subject is based on lectures and seminars. The practical adaptation of the topics of lectures are highly promoted by seminars. Students will learn about the major public health issues in developing and developed countries and organisation of public health services. During the epidemiology seminars students will learn how to calculate the most important indicators for the measurement of morbidity and mortality. In addition, the epidemiology of communicable and non-communicable diseases will be discussed in detail.

Department of Biopharmacy

Subject: **PHARMACEUTICAL BIOANALYTICS AND BIOTECHNOLOGY II.**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **28**

Practical: **56**

1st week:

Lecture: General introduction

Practical: Introduction, laboratory safety instructions

2nd week:

Lecture: Principles of cell culturing techniques

Practical: Introduction to the basic instruments, equipments and workflows of mammalian cell culturing

3rd week:

Lecture: Isolation of nucleic acids and proteins

Practical: Principles of DNA, RNA and protein isolation, RNA isolation using Trizol reagent

4th week:

Lecture: Fundamentals of nucleic acid isolation, gel electrophoresis, polymerase chain reaction and their application in bioanalytics and laboratory diagnostics

Practical: PCR

5th week:

Lecture: Basics of RT-PCR techniques and their application in research and laboratory diagnostics

Practical: RT-PCR

6th week:

Lecture: Immunoanalytical methods I.

Bioanalysis: the importance, role and performance of bioanalytical testing in drug discovery and development. ELISA, ELISpot, Southern-blotting, Northern-blotting
Practical: Western-blotting

7th week:

Lecture: Immunoanalytical methods II.
 Bioanalysis: the importance, role and performance of bioanalytical testing in drug discovery and development. Western-blotting
Practical: Western-blotting

8th week:

Lecture: Immunoanalytical methods III.
 Principles of immunohistochemistry.
 1st self-control test
Practical: Immunohistochemistry. Consultation

9th week:

Lecture: Immunoanalytical methods IV.
 Principles and applications of radioreceptor assays, RIA. Therapeutic drug monitoring
Practical: Immunohistochemistry

10th week:

Lecture: Immunoanalytical methods V.
 Principles and application of EIA, ELISA, FIA, FPIA, DELFIA, LIA, ECL, MIA, IEP, IP and

immunochromatography)
Practical: Application of rapid tests

11th week:

Lecture: Principles of receptor pharmacology.
 Saturation and displacement analysis as major receptor analytical tools
Practical: Application of rapid tests

12th week:

Lecture: Fundamentals and application of fluorescent in situ hybridization
Practical: FISH

13th week:

Lecture: Theoretical principles and practical applications of microarrays (DNA-, protein-based arrays). The tissue microarray technique
Practical: Microarray

14th week:

Lecture: Principles and applications of molecular imaging techniques (PET, SPECT, MR, CT, Optical imaging, Ultrasound)
 2nd self-control test
Practical: Consultation

Requirements

Attendance of 30% of the lectures is compulsory. If the student fails to attend at least 30% of the lectures according to the attendance list, the signature for closing the semester will be refused. The lecture will not be held if 5 or less students attend the lecture, but the material to be delivered in the lecture concerned will form part of both the written and the oral examination material. Attendance at practices is compulsory and 1 absence (1 practice) is allowed in the whole semester. To obtain the signature, the lab notes must be prepared and handed in on time, and the 2 compulsory written self-control tests must be passed with at least 60% (not on average but each of them). The 2 compulsory written tests will be based on the material of the practices and their theoretical background. Without the completion of the practices (no signature achieved), the final comprehensive oral exam cannot be taken. At the end of the semester, a comprehensive oral exam in Pharmaceutical Bioanalytics and Biotechnology II. must be done, where students will choose 1 topic from the lectures of the 1st semester and 2 topics from the lectures and exercises of the 2nd semester. The results of the 2 self-control tests will be awarded with a positive opportunity. If both tests are at

least 80% (not on average but each of them), the student can choose the more favourable one of the two 2nd semester topics and only have to take the exam from that topic and the one from the 1st semester.

Department of Clinical Basics

Subject: **CLINICAL BASICS II.**

Year, Semester: 4th year/2nd semester

Lecture: **28**

Seminar: **14**

1st week:

Lecture: Pulmonology

Seminar.

2nd week:

Lecture: Haematology

Seminar.

3rd week:

Lecture: Degenerative joint disorders, gout

Seminar.

4th week:

Lecture: Gastroenterology 1.

Seminar.

5th week:

Lecture: Gastroenterology 2.

Seminar.

6th week:

Lecture: Hypothalamic-pituitary axis, obesity, thyroid gland.

Seminar.

7th week:

Lecture: Adrenal cortex, calcium homeostasis

Seminar.

8th week:

Lecture: Diabetes mellitus

Seminar.

9th week:

Lecture: Nephrology

Seminar.

10th week:

Lecture: Gynecology

Seminar.

11th week:

Lecture: Hyperlipidaemia

Seminar.

12th week:

Lecture: Infectology

Seminar.

13th week:

Lecture: 1. Oncology

Seminar.

14th week:

Lecture: Consultation

Seminar. Self Control Test

Department of Medical Microbiology

Subject: **MEDICAL MICROBIOLOGY II.**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **14**

Seminar: **14**

1st week:

Lecture: Human pathogenic protozoa I.

Seminar: Antimalarial drugs. Development of malaria vaccine.

2nd week:

Lecture: Human pathogenic protozoa II.

Seminar: Antiprotozoal drugs.

3rd week:

Lecture: Medically important cestodes and trematodes.

Seminar: Anthelmintic drugs I.

4th week:

Lecture: Medically important nematodes.

Seminar: Anthelmintic drugs II. Drugs against ectoparasites.

5th week:

Lecture: General properties of viruses, pathogenesis, replication strategies.

Seminar: Diagnosis of viral infections, culturing, serology.

6th week:

Lecture: Antiviral agents.

Seminar: Determination of susceptibility to antiviral agents.

7th week:

Lecture: Herpesviruses.

Seminar: Treatment and vaccination of herpes infections.

8th week:

Lecture: Hepatitis viruses.

Seminar: Treatment, vaccination and diagnosis of viral hepatitis.

9th week:

Lecture: DNA viruses: Adeno, Parvo, Papilloma, Pox

Seminar: Congenital and neonatal virus infection.

10th week:

Lecture: Medically important RNA viruses.

Seminar: Treatment and vaccination of respiratory viruses.

11th week:

Lecture: Medically important arbo and robo viruses.

Seminar: Diagnosis of enteric viral infections.

12th week:

Lecture: HIV virus

Seminar: Opportunistic infections.

13th week:

Lecture: Prions

Seminar: Microbial control of pharmaceutical products.

14th week:

Lecture: Sterilization and disinfections.

Seminar: Standards of microbial purity of pharmaceutical products.

Requirements

Participation in the practical courses and seminars is obligatory. The Department may refuse to sign

the students' Lecture book if they are absent from more than two practices or seminars in a semester. At the end of the 2nd semester the student is required to take a final examination based on the whole material taught in the Medical Microbiology course. The final examination consists of a written test and oral examination.

Rules applicable during the state of emergency in the 2nd semester of the 2019-2020 Academic Year

On the eLearning website for the subject Medical Microbiology II, students can access a separate section for distant education. The students are required to check this site regularly for announcements, lecture and seminar material, forums and online tests (quizzes). The students are also required to check whether their e-mail addresses registered in Netun and eLearning are appropriate and used regularly by the student. The lecture materials are uploaded as annotated lecture slides (in pdf format). Students can ask questions regarding the lecture material in a forum attached to the lectures. The questions are answered within 1-2 days by the teachers of the Department. The seminar materials are available mostly in the same format as the lecture materials. In some cases, annotated pdf files are uploaded. Students also have a chance to ask questions regarding the practices (in forums attached to the practices) which will be answered within 1-2 days. From the material of the seminars, tests (called quizzes) are uploaded that should be completed online. Students have a chance to complete these tests any time during the week (up to 5 times). These tests work according to the so called "best test" principle, which means that the system always registers the best result of the student for calculating the average performance of the period. In order to receive the signature for the subject, a weighted average performance of at least 80% is required, that is calculated from all the tests completed by the student during the distance education period. Students having a valid signature for the subject from a previous semester are not required to take the quizzes but they are encouraged to do so. If they take the quizzes they are not required to reach the 80% average level.

Department of Pharmaceutical Surveillance and Economics

Subject: **PHARMACEUTICAL MANAGEMENT AND ORGANISATION**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Scope, goals and tools of Pharmaceutical Management: definition of the main tasks of management, specific aspects of a medicinal product, characteristics of the national and international drug market, international trends in marketing and health care. The trends on pharmaceutical business Statistical and scientific approaches evaluating the health parameters of the country: epidemiology and demographics of the country, (population, life

span, death rate, median age. life expectancy, incidence rates).

2nd week:

Lecture: Health care and financing in a macro level, Involvements of the government in health care: principles of central solidarity, benefits for public Health care systems and funds.

3rd week:

Lecture: Principles of pharmaceutical supply,

wholesale and retail processes. Quality assurance. New systems and methods. Characteristics and changes in public drug consumption: the role of generic and OTC drugs. Values of registers. The role of electronic systems, registers, big data.

4th week:

Lecture: Types of pharmacies. Regulation of pharmacy establishment, personal and material conditions. Role and responsibility of the licensed pharmacist. Operating and registration procedures of pharmacies and establishment of the duty system.

5th week:

Lecture: Tasks of competent bodies related to pharmaceutical redulation: competence and tasks of the National and Regional Chief Pharmacist. Pharmacists' organizations and chamber.

6th week:

Lecture: Ordering and dispensing of medicines. Digital healthcare and applied systems. Management of medicine shortages and crisis management.

7th week:

Lecture: The concept of management, leadership roles and tasks, leadership skills. Organizational structure. Change management. Health preservation and prevention. The purpose and possibilities of patient education and effective patient information in primary care. Pharmaceutical industry and business etiquette - unwritten rules and expectations.

8th week:

Lecture: The "life curve" of drugs, investment-benefit, life cycle management. Fundamentals of Pharmaceutical Marketing. Portfolio analysis, SWOT analysis, marketing strategies. Corporate and multinational strategy: Government regulation, the role of strategic health policy in the pharmaceutical industry.

9th week:

Lecture: Possibilities and regulation of pharmaceutical marketing outside and inside pharmacies. Marketing and advertising rules. Paradigm shift in healthcare with regard to public care. Medical representatives and their tasks. Content and ethical issues of drug information and drug promotion.

10th week:

Lecture: Phases, duration and financing issues of drug development and clinical trials. Characteristics of clinical trials (human phases I-III). Ethical standards and professional guidelines of clinical trials. ICH-GCP. Purpose and characteristics of drug registration, post-marketing /phase IV studies. Methodology of generic development and bioequivalence studies.

11th week:

Lecture: The purpose and economic significance of health economic analyses. Measuring quality of life (quality of life questionnaires, VAS scale). The purpose and economic significance of health economic analyses.

12th week:

Lecture: The importance of preclinical toxicology: pharmacoeology, environmental pollution, awareness. Sustainability and green management in pharmaceutical supply. Health preservation and prevention. The goal and possibilities of effective patient information in primary care.

13th week:

Lecture: Drug safety, protection against counterfeiting (serialization). Disaster and emergency management in the pharmacy.

14th week:

Lecture: Consultation on selected topics of pharmaceutical management.

Requirements

Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.

Conditions of signing the lecture book (by the end of semester): Participation in at least three (3) of 6 interim tests are required for the signature. Those ones who failed will be required to pass the "end of semester test" in order to obtain signatures.

Exam (semifinal, kollokvium)

The exam will be written and oral exam at the end of the semester which covers all the topics of the semester taken in the lectures or seminars. Written part includes a TEST (single choice, multiple choice, short description or definitions, etc.) and an Oral part (Two topics from selected list of questions provided.) Grade (semifinal mark) The average of the three scores (Test, Topic-1 Topic-2) compose the final mark (1-5 grades). Exemption (full or partial) may be earned - only for those student who had at least 5 tests taken successfully during the semester and reached at least 70%.

Department of Pharmaceutical Technology

Subject: **BIOCOSMETICS AND PHARMACEUTICAL ADVICE**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: History of cosmetics I.

2nd week:

Lecture: History of cosmetics II.

3rd week:

Lecture: History of cosmetics III.

4th week:

Lecture: Biocosmetics, theory

5th week:

Lecture: Basic skin types.

6th week:

Lecture: Cosmetic changes on skin I.

7th week:

Lecture: Cosmetic changes on skin II.

8th week:

Lecture: Therapy of seborrhoea.

9th week:

Lecture: Decor cosmetics I.

10th week:

Lecture: Decor cosmetics II.

11th week:

Lecture: Tooth and mouth care.

12th week:

Lecture: Cosmetics preparations I.

13th week:

Lecture: Cosmetics preparations II.

14th week: Lecture: Consultation

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn't attend 30% of lectures.

Department of Pharmacodynamics

Subject: **DIETARY SUPPLEMENTS, GENERAL NUTRIENTS AND MEDICAL DEVICES**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: 1.Introduction. Dietary supplements, medical devices, formulas in general (basic concepts, regulation, difference between medicine and dietary supplements).

2.Dietary supplements, medical devices, formulas from the point of view of the manufacturer and the authority.

2nd week:

Lecture: 1.Vitamins (dietary supplements vs. medicine)

2.Dietary supplements and medical devices which can be used during weight and blood sugar control.

3rd week:

Lecture: 1.Dietary supplements and bodybuilding.2. Drugs affecting the central nervous system, stimulants, improving memory.

4th week:

Lecture: 1. Dietary supplements affecting the respiratory system.2.Dietary supplements affecting the cardiovascular system.

5th week:

Lecture: 1.Dietary supplements affecting the gastrointestinal system.

2. Vision, hearing and other dietary supplements.

6th week:

Lecture: 1.Beauty care, aphrodisiac and fertility supplements.

2. Self control test I.

Self Control Test

7th week:

Lecture: 1.Dietary supplements and the urinary system.

2.Dietary supplements and the immunsystem.

8th week:

Lecture: 1.The health of bones and joints with dietary supplements.

2.Menopause and dietary supplements.

9th week:

Lecture: 1.Dietary supplements containing antioxidants.

2. Interactions between dietary supplements and medicines.

10th week:

Lecture: 1.Presentation of methods and examples used in the analytical testing of dietary supplements.

2. Basic nutrition I. - Macro and micro nutrients in the body.

11th week:

Lecture: 1.Basic nutrition II. – healthy diet and dietary advices.

2.Basic nutrition III. – Dietary management of

pathological conditions I.

12th week:

Lecture: 1. Basic nutrition III. – Dietary management of pathological conditions II.
2. Baby nutrition, infant formulas.

13th week:

Lecture: 1. Special issues of elderly nutrition.
2. Malnutrition and formulas.

14th week:

Lecture: 1. Self control test II.
2. Consultation.

Self Control Test

Requirements

During the semester, there are 2 written exams from the material covered in the semester, in which attendance is mandatory. The average of the two exams must be at least 50% for the semester to be accepted, and for the student to be eligible for the final exam. There is no opportunity for improvement if the average is below 50%. In that case, the semester will not be accepted, and the student's semester will be considered unsuccessful. The grade thresholds are as follows: below 50% is a fail, from 60% is a pass (grade two), from 70% is a satisfactory (grade three), from 80% is a good (grade four), from 90% is an excellent (grade five).

Subject: **PHARMACOLOGY PRACTICE II.**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Seminar: **42**

Practical: **14**

1st week:

Seminar: 1. Histamine, serotonin, bradykinin: agonists and antagonists. (PK, dose)
2. Drugs used in Asthma, COPD (guidelines, PK, dose).

Practical: 1. Histamine, serotonin, bradykinin: agonists and antagonists. (PK, dose)
2. Drugs used in Asthma, COPD (guidelines, PK, dose).

2nd week:

Seminar: 1. Drugs used in hematopoiesis (guidelines, PK, dose). 2. Drugs used in disorders of coagulation (guidelines, PK, dose).

Practical: 1. Drugs used in hematopoiesis (guidelines, PK, dose). 2. Drugs used in disorders of coagulation (guidelines, PK, dose).

3rd week:

Seminar: 1. Anti-inflammatory, Antipyretic, and Analgesic Agents. NSAIDs and gout (guidelines,

PK, dose).

2. Trombolitics, antifibrinolytics, anticoagulants

Practical: 1. Anti-inflammatory, Antipyretic, and Analgesic Agents. NSAIDs and gout (guidelines, PK, dose).

2. Trombolitics, antifibrinolytics, anticoagulants

4th week:

Seminar: 1. Introduction to the pharmacology of gastroenterology. Drugs used in acid-peptic disease. Gastro-oesophageal reflux disease (GERD) (guidelines, PK, dose). 2. Drugs promoting gastrointestinal motility. Antiemetic drugs. Laxatives. Antidiarrheal drugs (guidelines, PK, dose).

Practical: 1. Introduction to the pharmacology of gastroenterology. Drugs used in acid-peptic disease. Gastro-oesophageal reflux disease (GERD) (guidelines, PK, dose). 2. Drugs promoting gastrointestinal motility. Antiemetic drugs. Laxatives. Antidiarrheal drugs (guidelines,

PK, dose).

5th week:

Seminar: 1. Drugs used in the treatment of chronic inflammatory bowel diseases (IBD). Pancreatic enzyme replacement products. Pharmacology of the liver(guidelines, PK, dose). 2. Introduction to the pharmacology of the endocrinology. Hypothalamic hormones, Pharmacology of the adenohypophysis (guidelines, PK, dose).
Practical: 1. Drugs used in the treatment of chronic inflammatory bowel diseases (IBD). Pancreatic enzyme replacement products. Pharmacology of the liver(guidelines, PK, dose). 2. Introduction to the pharmacology of the endocrinology. Hypothalamic hormones, Pharmacology of the adenohypophysis (guidelines, PK, dose).

6th week:

Seminar: 1. Thyroid and antithyroid drugs(guidelines, PK, dose). 2. Regulation of the appetite. Pharmacotherapy of obesity (guidelines, PK, dose).
Practical: 1. Thyroid and antithyroid drugs(guidelines, PK, dose). 2. Regulation of the appetite. Pharmacotherapy of obesity (guidelines, PK, dose).

7th week:

Seminar: 1. Diabetes mellitus and antidiabetic drugs (guidelines, PK, dose). 2. General characteristics of steroid hormones. Adrenocorticosteroids and adrenocortical antagonists(guidelines, PK, dose).
Practical: 1. Diabetes mellitus and antidiabetic drugs (guidelines, PK, dose). 2. General characteristics of steroid hormones. Adrenocorticosteroids and adrenocortical antagonists(guidelines, PK, dose).

8th week:

Seminar: 1. Agents that affect bone mineral homeostasis(guidelines, PK, dose). 2. The gonadal hormones and inhibitors.

Uterotonics, tocolytics(guidelines, PK, dose).

Practical: 1. Agents that affect bone mineral homeostasis(guidelines, PK, dose).

2. The gonadal hormones and inhibitors.

Uterotonics, tocolytics(guidelines, PK, dose).

9th week:

Seminar: 1. Antibacterial chemotherapy – Cell wall synthesis inhibitors (guidelines, PK, dose).

2. Self control test I.

Practical: 1. Antibacterial chemotherapy – Cell wall synthesis inhibitors (guidelines, PK, dose).

2. Self control test I.

Self Control Test

10th week:

Seminar: 1. Antibacterial chemotherapy – Protein synthesis inhibitors (guidelines, PK, dose).

2. Antibacterial chemotherapy – Nucleic acid synthesis inhibitors. Antituberculotics (guidelines, PK, dose).

Practical: 1. Antibacterial chemotherapy – Protein synthesis inhibitors (guidelines, PK, dose). 2. Antibacterial chemotherapy – Nucleic acid synthesis inhibitors. Antituberculotics (guidelines, PK, dose).

11th week:

Seminar: 1. Antiviral chemotherapy and prophylaxis(guidelines, PK, dose).

2. Antifungal agents(guidelines, PK, dose).

Practical: 1. Antiviral chemotherapy and prophylaxis(guidelines, PK, dose). 2. Antifungal agents(guidelines, PK, dose).

12th week:

Seminar: 1. Antiparasitic chemotherapy: basic principles. Antiprotozoal drugs. Anthelmintic drugs(guidelines, PK, dose). 2. Cancer chemotherapy – cytotoxic agents(guidelines, PK, dose).

Practical: 1. Antiparasitic chemotherapy: basic principles. Antiprotozoal drugs. Anthelmintic drugs(guidelines, PK, dose). 2. Cancer chemotherapy – cytotoxic agents(guidelines, PK, dose).

13th week:

Seminar: 1.Cancer chemotherapy– cytostatic agents(guidelines, PK, dose).
2.Immunopharmacology (guidelines, PK, dose).
Practical: 1.Cancer chemotherapy– cytostatic agents(guidelines, PK, dose).
2.Immunopharmacology (guidelines, PK, dose).

14th week:

Seminar: 1.General consultation.
2. Self control test II.
Practical: 1.General consultation.
2. Self control test II.
Self Control Test

Requirements

During the semester, there are 2 written assessments of the semester's material, in which participation is mandatory. The average of the two assessments must be at least 50% in order for the semester to be accepted and for the student to be admitted to the exam. Below 50%, there is no possibility of improvement, we refuse to sign the semester, the student's semester is unsuccessful. Participation in the seminars is mandatory, in case of more than four absences, the semester signature is excluded. In addition to the theoretical assessment, the students write 2 tests based on the pre-specified active ingredients and the state exam tests. Practice grade is calculated based on: 1/3+1/3 theoretical self control test and 1/3 as the average of seminar self control tests (drug lists and state exam questions). In the case of grades calculated as four (minimum 80%) and five (minimum 90%) from the average of the 2 written exam, 2 topic will be asked on the final exam. Between fifty and sixty percent must be taken oral exam from the entire curriculum material of the semester during the last week of the semester.

Subject: **PHARMACOLOGY THEORY II.**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **56**

1st week:

Lecture: 1.Histamine, serotonin, bradykinin: agonists and antagonists.
2.Drugs used in Asthma, COPD.

2nd week:

Lecture: 1.Drugs used in hematopoiesis. 2.Drugs used in disorders of coagulation.

3rd week:

Lecture: 1. Thrombolitics, antifibrinolitikumok, anticoagulants
2. Anti-inflammatory, Antipyretic, and Analgesic Agents.NSAIDs and gout.

4th week:

Lecture: 1.Introduction to the pharmacology of gastroenterology. Drugs used in acid-peptic disease. Gastro-oesophageal reflux disease (GERD).
2.Drugs promoting gastrointestinal motility. Antiemetic drugs. Laxatives. Antidiarrheal drugs.

5th week:

Lecture: 1.Drugs used in the treatment of chronic inflammatory bowel diseases (IBD). Pancreatic enzyme replacement products. Pharmacology of the liver.
2.Introduction to the pharmacology of the endocrinology. Hypothalamic hormones, Pharmacology of the adenohypophysis.

6th week:

Lecture: 1. Thyroid and antithyroid drugs.
2.Regulation of the appetite. Pharmacotherapy of obesity

7th week:

Lecture: 1.General characteristics of steroid hormones. Adrenocorticosteroids and adrenocortical antagonists.
2. Diabetes mellitus and antidiabetic drugs.

8th week:

Lecture: 1.The gonadal hormones and inhibitors. Uterotonics, tocolytics. 2.Agents that affect bone mineral homeostasis

9th week:

Lecture: 1.Antibacterial chemotherapy – Cell wall synthesis inhibitors.

2. Self control test I.

Self Control Test

10th week:

Lecture: 1.Antibacterial chemotherapy – Protein synthesis inhibitors.2.Antibacterial chemotherapy – Nucleic acid synthesis inhibitors. Antituberculotics.

11th week:

Lecture: 1.Antiviral chemotherapy and prophylaxis.2.Antifungal agents.

12th week:

Lecture: 1.Antiparasitic chemotherapy: basic principles. Antiprotozoal drugs. Anthelmintic drugs. 2.Cancer chemotherapy – cytotoxic agents.

13th week:

Lecture: 1.Cancer chemotherapy– cytostatic agents. 2.Immunopharmacology.

14th week:

Lecture: 1.General consultation.

2. Self control test II.

Self Control Test

Requirements

During the semester, there are 2 written assessments of the semester's material, in which participation is mandatory. The average of the two assessments must be at least 50% in order for the semester to be accepted and for the student to be admitted to the exam. Below 50%, there is no possibility of improvement, we refuse to sign the semester, the student's semester is unsuccessful. At the end of the semester Pharmacology II. Theory, the exam takes the form of an oral test (2 topics from the II semester and 1 topics from the I semester, a short elaboration, then an oral answer). If a student fails to meet the minimum requirement (90%), they cannot take the final exam, and their exam will be considered unsuccessful (failing grade). If a student meets the requirements for the pre-exam but gives an unsatisfactory response during the final exam, their exam will be unsuccessful. They will need to retake the exam, but they won't have to retake the pre-exam. The pre-exam can be exempted. If the average of the written small reports (during the Pharmacology II practice sessions) throughout the semester is above 80%, there is no need to take the pre-exam before the final exam.

CHAPTER 20

ACADEMIC PROGRAM FOR THE 5TH YEAR

Clinical Center Clinical Pharmacy

Subject: **CLINICAL PHARMACY PRACTICE**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Seminar: **13**

Practical: **13**

1st week:

Practical: Introduction to hospital/clinical pharmacy

2nd week:

Practical: Basics of hospital/clinical pharmacy management

3rd week:

Practical: Quality assurance, Pharmacovigilance, Antibiotic stewardship

4th week:

Practical: Compounded medications in a hospital/clinical pharmacy

5th week:

Practical: Current status of chemotherapy

6th week:

Practical: Clinical pharmacy services

Self Control Test

7th week:

Practical: Pain management, medications of anesthetics and intensive care

8th week:

Practical: Anticoagulants; pharmacology, prophylaxis and therapy

9th week:

Practical: Volume therapy, Enteral and parenteral nutrition

10th week:

Practical: Allergy testing, Wound management

11th week:

Practical: Hospital/clinical pharmacy management in practice

12th week:

Practical: CATO system (Computer Aided Therapy for Oncology) in practice

13th week:

Practical: Supplementary practice

Self Control Test

Requirements

Attendance at the practice is compulsory, the signature may be refused in the case of absences from more than five practices. Students have one opportunity on the last week of the semester to make up for one missed practice. During the semester students have to take two writing and/or oral exams. The grade of the two exams will be averaged. Requirements for the signature is at least 50% in average. Under 50% there is no option for correction, the signature of the lecture book is refused

and student fails the semester. To be allowed to take the theory exam, students have to pass the requirements of this subject.

Department of Biopharmacy

Subject: **BIOPHARMACY**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

Practical: **26**

1st week:

Lecture: Fundamentals to biopharmacy

Seminar: Basic pharmacokinetic parameters

2nd week:

Lecture: The LADMER system and its components

Seminar: Volume of Distribution, Clearance, Half-life

3rd week:

Lecture: Liberation, absorption, distribution, metabolism, elimination, response

Seminar: One-compartment open model

4th week:

Lecture: Drug release from the delivery system, bioavailability of the drug at the absorption site

Seminar: Continuous and intermittent drug delivery

5th week:

Lecture: Drug clearance, hepatic drug elimination, renal drug elimination

Seminar: Equations, pharmacokinetic calculations I.

6th week:

Lecture: Drug transport. Active and passive transport

Seminar: Equations, pharmacokinetic calculations II.

7th week:

Lecture: Type of drug delivery systems

Seminar: Equations, pharmacokinetic calculations III.

8th week:

Lecture: Biopharmacy of tablets and capsules

Seminar: Equations, pharmacokinetic calculations IV.

9th week:

Lecture: Oral controlled release

Seminar: Equations, pharmacokinetic calculations V.

10th week:

Lecture: Delivering drugs by inhalation

Seminar: Equations, pharmacokinetic calculations VI.

11th week:

Lecture: Transdermal system

Seminar: Equations, pharmacokinetic calculations VII.

12th week:

Lecture: Time-programmed and patient-controlled drug delivery

Seminar: Equations, pharmacokinetic calculations VIII.

13th week:

Lecture: Smart drug delivery system and targeted therapy

Seminar: Equations, pharmacokinetic calculations IX.

End-of-semester control test

Requirements

At least 30% of the lectures must be visited. Absence of more than one practice is not allowed during the semester. Students have to write an end-of-semester control test. Only students having adequately fulfilled the requirements of practice are allowed to get the signature and take the final oral exam.

Subject: **PHARMACEUTICAL CARE**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

1st week:

Lecture: Pharmaceutical care (history, subject, theory, basic)

2nd week:

Lecture: Medication therapy management (subject, concept, theory)

3rd week:

Lecture: International pharmaceutical care protocols

4th week:

Lecture: Pharmaceutical care in Metabolic Syndrome

5th week:

Lecture: Diabetes prevention and pharm. care

6th week:

Lecture: Dyslipidemia and hypertension

7th week:

Lecture: Practice and theory of cholesterol, glucose, INR, and blood pressure measurement

8th week:

Lecture: Nutrition, diet and pharm. care I. (theory, BMI, calculations, prevention, nutrition pyramid)

9th week:

Lecture: Nutrition, diet and pharm. care II. (special diet and nutrition, special diet in metabolic syndrome and in oncology patients)

10th week:

Lecture: Pharmaceutical care and its limitation (in cold, cough, flu, upper respiratory problems, fever, sunburn etc.)

11th week:

Lecture: Asthma, COPD and special inhalation medication

12th week:

Lecture: Pharmaceutical care in reflux problems, heart burn, etc.

13th week:

Lecture: Pharm. care in hemostasis (coagulation, measurement etc.)

Requirements

At least 30% of the lectures must be visited. There is no self-control test during the semester. Only students having adequately fulfilled the requirements are allowed to get the signature and take the final exam.

Department of Clinical Basics

Subject: **CLINICAL PHARMACOLOGY**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

1st week:

Lecture: Basic principles of Clinical Pharmacology.

2nd week:

Lecture: Ethical and legal aspects.

3rd week:

Lecture: The study phases (I-II).

4th week:

Lecture: The study phases (III-IV).

5th week:

Lecture: The clinical trial protocol.

6th week:

Lecture: The GCP requirements in Clinical Pharmacology.

7th week:

Lecture: Study Report (Clinical, Final).

8th week:

Lecture: Statistical methods in Clinical

Pharmacology.

9th week:

Lecture: Quality Assurance in Clinical Pharmacology.

10th week:

Lecture: Adverse events, serious adverse events, side effect.

11th week:

Lecture: Patient Information and Informed Consent.

12th week:

Lecture: Practical experience in an ongoing study.

13th week:

Lecture: Visit of a pharmaceutical company.

Requirements

The aim of this course is to introduce the students into a rapidly developing and evolving subject. Clinical Pharmacology is not merely a link between Pharmacology and Clinical Medicine. The objective is to enhance the understanding of how drugs act and may be best used in the clinic, how compounds are transformed into drugs, how clinical trials are conducted.

Requirements of admission: after 4 years of pharmaceutical or medical studies

Speakers:

Miklós Bodor, M.D.,Ph.D., Associate Professor, Head of the Division of Clinical Pharmacology

Péter Kovács, M.D.,Ph.D.,Dsc, Professor in Pharmacology

Sándor Somodi, M.D.,Ph.D., Assistant Professor

Required infrastructure: lecture hall, library

Examination: oral and written

Literature: special papers and handbooks will be provided

Department of Pharmaceutical Chemistry

Subject: **QUALITY CONTROL**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

1st week:

Lecture: Definition and history of quality management. Basics of quality policy. Definitions of Quality Assurance (QA) and Quality Control (QC).

2nd week:

Lecture: Elements of Total Quality Management (TQM). Key issues of establishing TQM. The Six Sigma concept. Construction of a Project Quality Plan.

3rd week:

Lecture: Quality in the manufacturing and marketing activity. The quality circle. Quality improvement tools and techniques. Quality systems: the history of development and basics of the ISO system of standards.

4th week:

Lecture: Relationship between the elements of quality management, QA, GMP and QC. The GXP system for drug production and distribution. Good Pharmacy Practice (GPP). Philosophy, elements and directives of GPP. Guidelines for GPP requirements in practice.

5th week:

Lecture: The role of the GXP system during the life cycle of medicines and drug-candidates. The concept of Good Manufacturing Practice (GMP) requirements. Application of GMP: quality management.

6th week:

Lecture: Application of GMP: personnel aspects;

premises and equipment.

7th week:

Lecture: Application of GMP: documentation.

8th week:

Lecture: Application of GMP: production, manufacturing.

9th week:

Lecture: Application of GMP: contract manufacture and analysis; complaints and recalls; self-inspection. Validation: basic concepts of Good Validation Practice (GVP).

10th week:

Lecture: Basics of Good Distribution Practice (GDP). Personnel aspects of quality management infrastructure: responsibilities of the key personnel (production leaders and quality managers). The phenomenon of Qualified Person (QP).

11th week:

Lecture: The cost of quality: failure costs, prevention costs, appraisal costs. Sterile drug production: GMP requirements, methods of sterilization.

12th week:

Lecture: Definition and elements of Good Laboratory Practice (GLP). Documentation of the laboratory examinations and experiences. Good Control Laboratory Practice (GCLP). Essentials of Good Clinical Practice (GCP). Quality assurance of GCP. ICH GCP guidelines.

13th week:

Lecture: Inspections and auditing. International harmonization of inspections (PIC/S; ICH). WHO Guidelines for inspections.

(EMA). The US Federal Food and Drug Administration (FDA): Office of Regulatory Affairs (ORA). FDA Center for Drug Evaluation and Research (CDER). FDA quality system regulations for drug approval. Counterfeit medicines.

14th week:

Lecture: The Drug Registration procedure. Approval by the EU Member State authorities

Requirements

Within the pharmaceutical industry, quality is the key issue that has to be addressed above all others. It is the reason that so many regulations, guidelines and controls are important and applied. The course "Quality assurance" deals with quality in its widest sense, reviewing the International Standards Organization (ISO) series of standards, generic instruments such as Total Quality Management (TQM) and industry-specific topics like Good Manufacturing Practice (GMP). The conduct of pre-clinical and clinical studies of drug-candidates is controlled by a variety of regulations and guidelines known collectively as Good Laboratory Practice (GLP) and Good Clinical Practice (GCP), respectively. The assurance of safety and efficacy of pharmaceuticals from the time they leave the factory to the point at which they are used by the patient is the concept of Good Distribution Practice (GDP) and Good Pharmacy Practice (GPP), which latter is also essentially obliged to take care of patients under physician-controlled- and self-medication. Examination: written.

Department of Pharmaceutical Surveillance and Economics

Subject: **CLINICAL PHARMACY THEORY**

Year, Semester:

Number of teaching hours:

Lecture: **26**

Seminar: **13**

1st week:

Lecture: Introduction

Seminar: Documents on ward (patient's record, file, charts, medication records)

Seminar: Paediatric pharmacy

4th week:

Lecture: Adherence

Seminar: Dermatology in the clinical pharmacy practice

2nd week:

Lecture: Medication errors. Medicine distribution systems. Clinical pharmacy services.

Seminar: Medication therapy management. MedRec

5th week:

Lecture: Basics of oncology. Oncology pharmacy.

Seminar: Oncology pharmacy 1

3rd week:

Lecture: Therapeutic drug monitoring

6th week:

Lecture: Parenteral medications

Seminar: Oncology pharmacy 2

7th week:

Lecture: Nosocomial infections. Antibiotic stewardship. OPAT.

Seminar: Oncology pharmacy 3

8th week:

Lecture: Clinical nutrition

Seminar: Clinical toxicology

9th week:

Lecture: Gerontopharmacology

Seminar: Impaired organ functions and medicine use 1

10th week:

Lecture: Emergency medications

Seminar: Impaired organ functions and medicine use 2

11th week:

Lecture: Deprescribing, prescribing cascade

Seminar: Extracorporeal therapies

12th week:

Lecture: Pharmacogenetics, clinical pharmacokinetics

Seminar: Medical gases, Oxygen therapy, assisted ventilation

13th week:

Lecture: Medical devices on ward

Seminar: Contrast media

Requirements

All topics discussed in the lectures are an integral part of the course assessment, therefore they are included in the self-control test and the final exam. Conditions for signing the lecture book: The Department may refuse to sign the lecture book if the student has not attended 30% of the lectures. Attendance at seminars is mandatory.

Subject: **PHARMACOVIGILANCE**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **18**

Seminar: **8**

1st week:

Lecture: The new concept and definitions in Pharmacovigilance. Scientific, regulatory and medical considerations. National and international PhV guidelines for health care professionals. Roles and responsibilities: drug agencies, manufacturers and HCP.

2nd week:

Lecture: Definitions of medical and drug safety terminology. MEDRA coding, adverse drug reaction, ADR, AE, SAE, CIOMS. Discussion of

selected examples. Reporting in practice: characterization of events.

3rd week:

Lecture: The clinical part I: Classification of side effects, adverse drug reactions. Drug and food interactions. Reporting guidelines and practice.

4th week:

Lecture: The clinical part II. Population based, genetic, gender, and age factors in drug safety, vulnerable populations.

5th week:

Lecture: The EUDRA-Vigilance system for drug for specific data to collection. safety reporting. National and European guidelines. Good Vigilance Practice.

6th week:

Lecture: The process: safety reporting and process of Signal detection. Participants in pharmacovigilance activities and specific roles.

7th week:

Lecture: The theory: basics of Drug safety and Benefits/risk evaluation. Risk management and signal detection, statistical aspects. Discussion of selected examples. Safety reporting in clinical practice Reports and results.

8th week:

Lecture: Drug safety in practice. Pharmacovigilance in practice: tools for pharmacists, physicians and for the patients. Consultation on selected topics. Routine and additional risk minimization practices.

9th week:

Lecture: Roles, responsibilities and participants of the national and EU pharmacovigilance systems. The implications on public health and economy. Patient education: options and results.

The role of pharmacists and the medical team in pharmacovigilance practice. Alerts and attention

10th week:

Seminar: Description and practice of adverse reaction reporting through the presentation of clinical examples. The responsibilities of doctors and pharmacists regarding the rules for the management of serious and non-serious but unexpected adverse reactions.

11th week:

Seminar: Informing patients: the structure and content of the patient information leaflet. Tools for informing professionals: the content of the product information leaflet. Signal detection – recognition, evaluation, analysis.

12th week:

Seminar: Risk assessment through practical examples, risk/benefit ratio. Practice of routine risk reduction procedures.

13th week:

Seminar: Continuous and routine pharmacovigilance tools. Additional activities, high-priority risks and enhanced monitoring practices.

Requirements

Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.

Conditions of signing the lecture book (by the end of semester): Participation in at least three (3) of the interim tests are required for the signature. The ones who failed will be required to pass the "end of semester test" in order to obtain signatures.

Exam (semifinal)

The exam will be written and oral exam at the end of the semester which covers all the topics of the semester taken in the lectures or seminars. Written part (TEST (single choice, multiple choice, short description or definitions, etc.) and an Oral part (Two topics from selected list of questions provided.) Grade (semifinal mark) The average of the three scores (Test, Topic-1 Topic-2) compose the final mark (1-5 grades).

Exemption (full or partial) may be earned - only for those student who had at least 70%, can be

eligible to submit an: I.) Oral presentation or a II.) Written essay of selected topics.

Department of Pharmaceutical Technology

Subject: **PHARMACEUTICAL COMMUNICATION SKILLS**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

1st week:

Lecture: Professional pharmaceutical communication I.

2nd week:

Lecture: Professional pharmaceutical communication II.

3rd week:

Lecture: Professional pharmaceutical communication III.

4th week:

Lecture: Professional pharmaceutical communication IV.

5th week:

Lecture: Advertising, the role of advertising I.

6th week:

Lecture: Advertising, the role of advertising II.

7th week:

Lecture: Health behaviour I.

8th week:

Lecture: Health behaviour II.

9th week:

Lecture: Expectations for communications I.

10th week:

Lecture: Expectations for communications II.

11th week:

Lecture: The problem of risk personality I.

12th week:

Lecture: The problem of risk personality II.

13th week:

Lecture: Situations

14th week:

Lecture: Test

Self Control Test

Requirements

Attendance in the lectures is required.

Subject: **NUTRITIONAL THERAPY**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **13**

1st week:

Lecture: Introduction. Digestive and absorption problem of nutrients. Pathological definitions.

2nd week:

Lecture: Nutrition of newborns and infants. Metabolism and absorption disturbances.

3rd week:

Lecture: Type and composition of infant nutrition.

4th week:

Lecture: Determination of energy demand and nutrient requirement.

5th week:

Lecture: Classification and composition of enteral nutrition products.

6th week:

Lecture: Manufacturing requirements and release.

7th week:

Lecture: Classification of artificial nutrition. Percutaneous Endoscopic Gastrostomy.

8th week:

Lecture: Accessories and type of parenteral nutrition therapy Preparations of parenteral nutrition therapy.

9th week:

Lecture: Aspects and methods of feeding premature babies. Premature feeding protocol.

10th week:

Lecture: Carbohydrate intake aspects. Ketogenic diet.

11th week:

Lecture: Practice of Glycemic Index.

12th week:

Lecture: Lipid intake aspects.

13th week:

Lecture: Protein intake aspects.

14th week:

Lecture: Protein intake aspects.

Requirements

The aim of this course is to provide comprehensive information about realization of clinical and home nutrition, present the type of starters and accessories of artificial nutrition

Subject: **STATE EXAM PRACTICE II. (PHARMACEUTICAL BUSINESS ADMINISTRATION)**

Year, Semester: 5th year/2nd semester

Number of teaching hours:

Practical: **60**

Subject: **THESIS CONSULTATION**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Practical: **26**

Department of Pharmacodynamics

Subject: **DRUG INTERACTIONS AND THERAPEUTIC GUIDELINES**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

Seminar: **13**

1st week:

Lecture: Introduction, definitions. Basic principles. Pharmacokinetic and pharmacodynamic interactions.

Seminar: Pharmacokinetic and pharmacodynamic interactions, practical examples

2nd week:

Lecture: CNS and interactions I.

Seminar: General and local anesthetics, opioid analgesics, muscle relaxants (therapeutic protocols)

3rd week:

Lecture: CNS and interactions II.

Seminar: Sedato-hypnotics, anxiolytics, antidepressants, anti-manic drugs, anti-epileptics, Alzheimer's and Parkinson's disease (therapeutic protocols).

4th week:

Lecture: Interactions with sympathomimetics and antiasthmatics

Seminar: Astma bronchiale, COPD (therapeutic protocols).

5th week:

Lecture: Cardiovascular drug interactions.

Antidiuretic drug interactions.

Seminar: Hypertension, ischemic heart disease, heart failure, peripheral arterial disease (PAD), chronic venous disease, glaucoma (therapeutic

protocols).

6th week:

Lecture: Diabetes treatment and it's drug interactions.

Seminar: Dyslipidemia, metabolic syndrome, diabetes (therapeutic protocols).

7th week:

Lecture: Antitrombotic therapy and it's interactions

Seminar: Thrombolytics, anticoagulants, platelet aggregation inhibitors, hemostatics (therapeutic protocols).

8th week:

Lecture: Self control test I.

Seminar: GIT diseases (therapeutic protocols).

Self Control Test

9th week:

Lecture: Glucocorticoids, NSAIDs- drug interactions.

Seminar: Pain management, inflammation, fever, allergy, gout (therapeutic protocols).

10th week:

Lecture: Oral contraceptives' interactions.

Seminar: Estrogens, progestogens, gonadotropic hormones, androgens (therapeutic protocols)

11th week:

Lecture: Possible interactions during antibiotic therapy.

Seminar: Most frequent infections (therapeutic protocols).

12th week:

Lecture: Cancer management and drug interactions.

Seminar: Most common cancers (therapeutic

protocols).

13th week:

Lecture: Immunosuppressants, immunostimulants and drug interactions

Seminar: Immunosuppressants, immunostimulants (therapeutic protocols) Self control test II.

Self Control Test

Requirements

At the end of the semester, the exam takes the form of an oral colloquium. During the semester, the students write twice from the material of the seminar and the theory. They receive a grade from the average of the two tests, which is included in the grade of the colloquium. The point limits: from 60% to pass (2), from 70% to satisfactory (3), from 80% to good (4), from 90% to excellent (5). At the colloquium, the students draw two topics, which, in addition to the grade received at the seminar, gives the colloquium mark. Participation in the seminars is mandatory. In case of more than four absences, the semester will not be accepted.

Subject: **TOXICOLOGY**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **26**

1st week:

Lecture: General toxicology (definitions, management of poisoned patient)

2nd week:

Lecture: Medical toxicologists (Psychiatric-related medications).

3rd week:

Lecture: Medical toxicologists (Cardiovascular drug toxicity).

4th week:

Lecture: Medical toxicologists (Painkiller and other drugs).

5th week:

Lecture: Pediatric Toxicology (during pregnancy and lactation, poisoning in children)

6th week:

Lecture: Animal poisoning. Self control test I.
Self Control Test

7th week:

Lecture: Plant poisoning.

8th week:

Lecture: Mushroom poisoning.

9th week:

Lecture: Metal poisoning

10th week:

Lecture: Pesticide poisoning.

11th week:

Lecture: Toxicology of plastics.

12th week:

Lecture: Occupational toxicology.

control test II.

Self Control Test

13th week:

Lecture: Hemolytic compounds, war gases. Self

Requirements

There is an oral exam at the end of the semester. During the semester, there are 2 written assessments of the semester's material, in which participation is mandatory. Based on the results of the two tests, the colloquium can be replaced, we offer a ticket from 80% to good (4), from 90% to excellent (5)

Department of Pharmaceutical Technology

Subject: **STATE EXAM PRACTICE II. INSTITUTIONAL PHARMACY OR GALENIC LABORATORY**

Year, Semester: 5th year/2nd semester

Number of teaching hours:

Practical: **120**

Requirements

Duration of the practice is 2+4 months, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

He/she is expected to follow the guidance of the pharmacist in charge of the training.

- practical application of the theoretical knowledge obtained during his / her studies,
- the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,
- he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
- he/ she is expected to communicate with the patients in an appropriate way,
- he / she is required to appropriately inform and give advice in connection with the patients' questions regarding self-healing and preparations without prescription (drugs and other products),

He / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

Under the supervision and instructions of the pharmacist in charge of the training he / she the following activities:

1. Drug Dispense. In the process he / she is required to learn:
 - how to check the content and layout of the prescription
 - the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name,
 - appropriate patient information knowing the effects and adverse effects of drugs,
 - recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement),
 - characteristic/obligatory cases and methods of medical information and consultation,
 - duties in connection with the known/identified adverse effects of drugs,
 - adherence control and means of correction, common uses,
 - the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose,
 - the possibilities and rules of access to data regarding the patients' previous medication (OEP database),
 - the database of nutrition complements and medicinal formulae
 - proper application of the labelling and dispensing computer program.
2. Preparation of medicine. In the process he / she is required to learn:
 - How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
 - The legal possibilities of changing the original prescription
 - The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
 - Documentation of preparation, and administrative obligations
 - Storage of materials, processing of basic formulations and subsequent administrative obligations
 - Formulations of the compendium and FoNo
3. Operation, quality assurance. In the process he / she is required to learn:
 - administrative work in the pharmacy
 - the rules concerning the staff of the pharmacy; qualification, labor law requirements,
 - standard procedures for workflow
 - how to check and document workflow
 - the rules pertaining to the examining and sampling incoming medications,
 - documentation of examinations
4. Medication management. In the process he / she is required to learn:
 - aspects of inventory management,
 - how to order medicine
 - duties in case of waste products, returned items, damage,
 - withdrawal of products from circulation,
 - duties regarding shift of prices,
 - closings: daily, weekly, periodic as well as schedule of OEP reports,

- importance and practice of supervision of prescriptions,
- about narcotics and activities involving their handling,
- the rules pertaining to hazardous waste.

Keeping an electronic workbook: the description of two practical problems in half/one page weekly. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean's Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: STATE EXAM PRACTICE II. PHARMACY DISPENSING II.

Year, Semester: 5th year/2nd semester

Number of teaching hours:

Practical: **120**

Subject: STATE EXAM PRACTICE II. PRESCRIPTION PHARMACY II.

Year, Semester: 5th year/2nd semester

Number of teaching hours:

Practical: **120**

1st week:

Lecture: Technical books of pharmacy. (H.Ph. VII., H.Ph.VIII., Eur. Ph. 7., FoNoVII.)

2nd week:

Lecture: Nomenclature

3rd week:

Lecture: reading of prescriptions

4th week:

Lecture: materials knowledge

5th week:

Lecture: calculations

6th week:

Lecture: computer program.

7th week:

Lecture: Theoretical and practical knowledge of

registered drug preparations

8th week:

Lecture: Basic knowledge of pharmacy management, pharmaceutical affairs organizations and juristic knowledge for pharmacists.

9th week:

Lecture: Pharmacy organizations.

10th week:

Lecture: The basic knowledge of medical aid products, equipments and machines for pharmaceutical preparations.

11th week:

Lecture: the theoretical and practical knowledge of vaccines, immunosera, and sutures for human and veterinary use.

12th week:

Lecture: Consultation

13th week:

Lecture: The students need to practice the medium scale pharmaceutical technology operations.

14th week:

Lecture: Equipments and machines for medium scale pharmaceutical technology operations.

Subject: **STATE EXAM PRACTICE II. – PHARMACEUTICAL MANAGEMENT, QUALITY ASSURANCE**

Year, Semester: 5th year/2nd semester

Number of teaching hours:

Practical: **60**

Subject: **THESIS**

Year, Semester: 5th year/2nd semester

Number of teaching hours:

Practical: **28**

CHAPTER 21 REQUIRED ELECTIVE COURSES

DEENK Life and Natural Sciences Library

Subject: **LIBRARY SYSTEM**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **10**

1st week:

Practical: Introduction to the Library and library use:

- Traditional services (registration, rules of library usage, loans, reading room, computer lab).
- Electronic services (the Library's home page, online catalogues).

2nd week:

Practical: Electronic Information Resources:

- Electronic journals
- Link collections

3rd week:

Practical: Databases:

- Medline
- Impact Factors

4th week:

Practical: Databases, AI tools

5th week:

Practical: Test

Requirements

The aim of the course:

The aim of the course is to equip students with the skills and knowledge necessary to effectively find, evaluate, and use information. Identifying the type and scope of information required for various tasks and research. Effective Searching Strategies:

Learning how to use different search tools and databases. Developing advanced search techniques, such as using keywords, Boolean operators, and filters. Critical Evaluation of Information:

Assessing the credibility, reliability, and bias of information resources.

Distinguishing between different types of sources (e.g., scholarly vs. popular, primary vs.

secondary). Ethical Use of Information: Understanding issues related to plagiarism and intellectual property. This course aim to foster critical thinking and empower students to become independent learners in an information-rich society.

Students will gain practical experience in the ethical application of AI tools and technologies, including prompt engineering, source citation, and critical thinking. The course includes hands-on training with AI-powered software such as Chat GPT, Semantic Scholar, Research Rabbit, and LitMaps, enabling students to effectively utilize these tools in their research and learning processes.

Department of Applied Chemistry

Subject: **PHARMACEUTICAL EXCIPIENTS**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **14**

1st week:

Seminar: Basic standards of SI. Prefixes.
Measurements in pharmacy.

2nd week:

Seminar: Basic chemical calculations.

3rd week:

Seminar: Introduction to Polymer Chemistry.

4th week:

Seminar: Polymeric excipients, general characterization..

5th week:

Seminar: General view of a medicine. Active ingredients, excipients, contaminants.

6th week:

Seminar: Consultation, problem solving

7th week:

Seminar: Mid term test

8th week:

Seminar: Controlled drug release.

9th week:

Seminar: Fillers, solvents, emulsifiers.

10th week:

Seminar: Antioxidants, preservatives.

11th week:

Seminar: Aerosol propellants, colorants.

12th week:

Seminar: Materials for packaging.

13th week:

Seminar: Incompatibility. Consultation, problem solving.

14th week:

Seminar: End-term test.

Requirements

The presence of students at the seminar is obligatory and will be recorded. If the student is absent from more than 4 seminars, the semester will not be accepted Evaluation is based on exam performance: mid-course and end-course written exams (50-50%). Detailed information will be given in the first lecture.

Special rules of procedure during the state of emergency in the second semester of 2019/2020 school year

According to the regulations of the University of Debrecen the course is organized as distance learning from 23rd March 2020 until its withdrawal. The distance learning platform is the elearning system (elearnig.unideb.hu), where the lecture course can be found and an automatic Neptune enrollment takes place. Upon entering the elearning.unideb.hu system, the student registered earlier in Neptun automatically becomes a participant of the course, where a Forum for consultations has also been created. Lecturers publish course materials or their access path in the distance learning system as well as the information connected with technical implementation of distance lessons and assesment of results.

The content of the curriculum to be taught does not change, the provisions of the accepted syllabus at the beginning of this semester shall continue to apply. However the way of learning is adapted to technical possibilities. Attendance at lectures is not mandatory, participation in seminars is logged by the elearning system. Moodle courses may be used for their own learning purposes but may not be shared or disseminated by students on the Internet.

Department of Biochemistry and Molecular Biology

Subject: **MOLECULAR MECHANISM OF DISEASES OF GREAT POPULATIONS**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **25**

1st week:

Lecture: Introduction to molecular medicine

2nd week:

Lecture: Genomic medicine

3rd week:

Lecture: Diabetes

4th week:

Lecture: Obesity

5th week:

Lecture: Vitamin D and immunodefects

6th week:

Lecture: Cancer I.

7th week:

Lecture: Cancer II.

8th week:

Lecture: Cancer II.

9th week:

Lecture: Osteoporosis

10th week:

Lecture: Immunodeficiencies

Requirements

Course content: topics presented at the lectures (available at the elearning site of the Department of Biochemistry and Molecular Biology,) Follow the link: Educational materials- Elective courses

Attendance: Students are expected and required to attend all lectures of this course. No more than one unexcused absence is permitted. Students will fail the course on their second unexcused absence. Legitimate excuses should be presented in writing to the course administrator by the specified date.

Grading policy: The final grade will be based on the final oral exam at the end of the semester. Students have to select one topic from the full list of course topics for their oral exam, and can sign up for the topic at the link below. The final sign-up sheet will be posted on the department web-site at the beginning of the exam period. It will be your responsibility to contact the lecturer for the assignment, and for the date of the oral examination. The course lecturers will assign scientific publications to the students based on the sign-up sheet. For the oral exam students are expected to prepare a short Powerpoint presentation (4-5 slides) based on the publication, and discuss the

publication with the lecturer.

Please follow the announcements of the course administrator about exam dates or changes in the schedule on the bulletin board (LSB downstairs, 1 corridor), and on the department

Department of Emergency Medicine

Subject: **FIRST AID AND REANIMATION**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: **7**

Practical: **7**

1st week:

Lecture: The concept of first aid, first aid levels. Time Factor. The role of the scene. The usage of paramedics, rules of calling ambulance. ABCDE approach.

2nd week:

Lecture: Concept and recognition of unconsciousness. Symptoms of airway obstruction. Airway management. Recovery position.

3rd week:

Lecture: Organizational tasks at the site of the resuscitation. Prevention and solution of the complications of resuscitation. BLS. Effect, result, success in CPR. AED.

4th week:

Lecture: Death as a process. Reversibility. Assessment of vital signs. First aid for burns. Shock.

5th week:

Lecture: Burning; first aid in burning diseases; shock. Intoxications. Ways of poison can enter the body. First aid of poisoning with corrosive and non-corrosive substances. Typical symptoms and recognition of common poisons.

6th week:

Seminar: Checking breathing and circulation. Ventilation without equipment. ABCDE approach.

7th week:

Practical: Practising ventilation without equipment.

8th week:

Practical: Practising chest compression.

9th week:

Practical: Cardiac arrest care simulation (BLS+AED)

Self Control Test

10th week:

Practical: General rules of wound care. Presenting wound dressing and immobilization devices. Sterility. Bleeding control. Arterial pressure points. Arterial and venous pressure bandage. First aid for soft tissue contusion, distortion, dislocation and bone fracture. Immobilization devices: Schanz cervical collar, Desault's bandage, hand and finger fracture fixation. Triangular bandage. Kramer-, pneumatic air splint device. Bone fracture care by body regions. Complex trauma care.

Requirements

Condition of signing the Lecture book:

Attendance at practices is compulsory. The tutor may refuse to sign the Lecture book if the student is absent from the practicals more than twice in a semester. Missed practicals should be made up after consultation with the tutor. Facilities for a maximum of 2 make-up practicals are available at the Simulation Center in Debrecen. The current knowledge of students will be tested twice in each semester driving a written test.

Special rules for Emergency Medicine (2nd semester of the 2019/2020 academic year)

In accordance with the educational schedule of the Department of Emergency Medicine, pre-recorded video materials and pdf files were uploaded to our educational website (<https://elearning.med.unideb.hu/>).

An online video consultation will be held once for each classes, when all questions with regard to our education and the exams will be answered.

As the education of First Aid/Resuscitation and Emergency Medicine are highly practice-oriented, these cannot be completed via the internet. Therefore, active participation of students and the use of educational tools are obligatory to fulfil our requirements. Thus, at least one BLS/ complex situation practice will be essential, before students can take the exam.

Compulsory attendance at 30% of lectures, as a condition for admission to the exam, is abolished.

Compulsory participation in practices, except an additional practice, is abolished, too.

Oral examination is compulsory; therefore, it will be possible only if the epidemiological situation is resolved.

Department of Inorganic and Analytical Chemistry

Subject: **ENVIRONMENTAL ANALYTICAL CHEMISTRY**

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **42**

1st week:

Lecture: The definition, development, tasks, position, and relationship of environmental analysis with other scientific fields and disciplines. The spheres at the center of environmental analysis and their characterization. The classification and characterization of environmental samples and methods.

2nd week:

Lecture: The steps of environmental analysis from sampling to measurement, defining the individual steps, their significance, and implementation. The most important requirements for sampling. Developing a sampling plan, sampling strategies, and statistical

methods for sampling.

3rd week:

Lecture: Sampling of surface water and groundwater, including lakes and rivers: methods, tools, and implementation. Possibilities for on-site analysis, preservation, and transportation techniques. Determination of the most important water quality parameters: COD, BOD, major ions indicative of salinity. Rapid tests.

4th week:

Lecture: Sampling of soils and sediments: methods, tools, implementation. Possibilities for on-site analysis, characterization of soil and sediment samples, rapid tests.

5th week:

Lecture: Air, gases, and atmospheric aerosols sampling: methods, tools, implementation. Possibilities for on-site analysis, rapid tests suitable for qualitative and quantitative examination. Emission, immission, indoor air pollution.

6th week:

Lecture: Sampling of biological samples: animal and plant-origin, as well as human samples, transportation, storage, preparation.

7th week:

Lecture: Environmental indicators and their significance, biological indication. Biotic and abiotic indicators, active and passive bioindication. Environmental monitoring, environmental impact assessment.

8th week:

Lecture: Preparation of environmental samples: grinding, crushing, homogenization. Extraction techniques, digestion, ashing, disruption and extraction, reactions occurring at high

temperature and pressure.

9th week:

Lecture: Inorganic chemical methods in environmental analysis: the most important inorganic components and their measurement possibilities, destructive and non-destructive techniques, atomic spectrometry methods.

10th week:

Lecture: Organic chemical methods in environmental Analysis: the most important organic components and measurement possibilities, chromatographic techniques, mass spectrometry.

11th week:

Lecture: The significance of speciation analysis in environmental analysis, properties of elemental forms, element-specific sampling and sample preparation, element-selective analysis, and coupled techniques.

12th week:

Lecture: The most important naturally occurring and artificially produced environmental pollutants and their classification. Case studies and epidemiological examples, pharmaceutical industry implications.

13th week:

Lecture: Possibilities of age determination, radiocarbon-based methods. Dating of environmental samples, significance, and application areas.

14th week:

Lecture: Student presentations

Requirements

The aim of the lecture: Students will gain general knowledge about the organic and inorganic chemical methods used in environmental analysis. They will become familiar with the theoretical

background of the main sampling, sample preparation, and classical and instrumental analytical procedures related to environmental chemistry. Beyond understanding the complex process of chemical analysis, they will learn through practical examples how to gather spatial and temporal information about the qualitative and quantitative composition, structure, and energy state of a material system.

Main topics: The concept, scope, and applications of environmental analysis, classification options. Steps of environmental analysis, classical and instrumental analytical methods. Basic concepts and strategies of environmental sampling, rules for sample transportation, preservation, and storage, sample preparation techniques. Classification of the components to be measured, thematic presentation of relevant analytical methods. Discussion of common interferences caused by matrix components. Speciation analysis. Epidemiological studies, examples from the pharmaceutical industry.

Conditions for obtaining the signature: The student will present, in the form of a 15-minute oral presentation, a selected environmental issue during one of the last two consultation sessions of the semester. Recommended topics are available on the e-learning platform, but any freely chosen idea supported by relevant literature can be presented after consultation with the instructor.

Exam: A written exam based on the lecture material must be completed during the examination period. The exam will be available once or twice a week and will consist of multiple-choice and open-ended questions. During the last lecture, there will be an opportunity to write a qualifying midterm exam, the successful completion of which will exempt the student from the final exam. It can only be taken once and cannot be repeated, but it does not count as an exam attempt.

Department of Operative Techniques and Surgical Research

Subject: **BASIC KNOWLEDGE OF SURGICAL BIOMATERIALS FOR STUDENTS OF PHARMACY**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **8**

Seminar: **16**

Practical: **8**

1st week:

Lecture: General and surgical deontology.

Surgical armamentarium

Seminar: Cutting, hemostatic, grasping-retracting, special and suturing instruments. Order of the instrumental trays and tables.

Handling and sterilization of the instruments.

2nd week:

Lecture: Wound closure and the required surgical biomaterials.

Practical: Surgical needles, suture materials, knotting and suturing techniques.

3rd week:

Lecture: Operating room environment, order of the operating work. Scrubbing and the required

materials. Preparations for the operation, isolation of the operative field.

Practical: Scrubbing. Wound closure with different suturing techniques on bioprepate models.

4th week:

Lecture: Hemostasis. Methods and the required materials. Injection techniques and blood sampling. Punction, preparation and cannulation of vessels.

Seminar: Different types of infusion accessories. Demonstration of the infusion pump.

Practical: Ligation of vessels on gauze models. Vein preparation/cannulation, injection techniques (i.m., i.v.) and taking blood samples on phantom models. Preparing the infusion set and connecting it to the venous catheter. Different types and use of blood pressure manometers.

5th week:

Lecture: Surgical incisions and laparotomies. Basic principals of intestinal surgery. Endoscopic techniques.

Seminar: Wound types. Principles of wound care. Wound dressings. Definition, types and application of catheters and drains. Video-demonstration of laparotomies. Catheterization of the urinary bladder (video-demonstration). Incontinence and its treatment. Urine condoms. Types and handling of stoma bags.

6th week:

Lecture: Insight into the surgery of the parenchymal organs. Bioplasts and tissue adhesives and their application field. Conicotomy, tracheostomy. Basic principles of vascular surgery.

Seminar: Management of splenic injuries. Application of bioplasts and tissue adhesives. Conicotomy and tracheostomy. Reconstruction of blood vessels and the required biomaterials. (video demonstrations)

7th week:

Lecture: Ethical issues for animal research. Animal care, ethical problems, permissions. Keeping and treatment of experimental and laboratory small animals (mouse, rat).

Seminar: Treatment of laboratory animals. Drug delivery and administration. Requirements of ISO, GLP.

8th week:

Lecture: Narcosis and anesthesia of experimental animals. Intraoperative monitoring, registration of various parameters.

Seminar: In vivo, ex vivo, in vitro techniques and models. Extermination, autopsy and taking samples of experimental animals.

Self Control Test

Requirements

Prerequisite: Pharmaceutical technology theory I, Human physiology II

Aim of the course:

The main aim is to acquire up-to-date theoretical and practical knowledge that is appropriate to the modern age and the students can get acquainted with the basic methods, that can help the pharmacy students to be familiar with the basic surgical interventions and the required materials during their future work. The students have to learn the characteristics and the means of application of the biomaterials (suturing materials, bioplasts, tissue adhesives, catheters, drains, stoma bags, urine condoms, incontinence pads) that can be used during the surgical practice. They should have the knowledge of the manual interventions that they may need during pharmacological experimental work. A further aim is to improve manual skills. They have to possess the basic knowledge and skills for catastrophe, in order to be capable to help in manual (operative) - often life-saving -

activity. They should have the basic knowledge to be able to inform patients, which is part of the work done by the dynamic team of a doctor and pharmacist.

Requirements:

If the student is absent from more than 20% of all teaching hours (6 out of 32) without any acceptable reason, the Department may refuse to sign the Lecture Book. The hand-outs are also part of the curriculum. Performance is assessed on the five-grade scale (AW5) and it is based on the work through the semester and completion of the final written test at the end of the course.

Exam: AW5 (written final test)

Compulsory Reading:

Lecture slides in pdf and supplementary materials (e-Learning folder of the course)

Recommended Reading:

Mikó I., Furka I., Basic Surgical Techniques, Faculty of Medicine, 4th (enlarged) edition, Debrecen University Press, 2019.

Subject: **HISTORY OF MEDICINE**

Year, Semester: 1st year/1st semester, 1st year/2nd semester, 2nd year/1st semester, 2nd year/2nd semester, 3rd year/2nd semester, 3rd year/1st semester, 4th year/1st semester, 4th year/2nd semester, 5th year/1st semester, 5th year/2nd semester

Number of teaching hours:

Lecture: **26**

1st week:

Lecture: Introduction. Sources and methods of history of medicine. Paleomedicine, prehistoric medicine.

2nd week:

Lecture: Medicine of the ancient river valley civilizations: China, India, Mesopotamia.

3rd week:

Lecture: Medicine in the ancient Egypt.

4th week:

Lecture: Ancient Greek medicine. Asclepions. Hippocrates. Concept and doctrines. Corpus Hippocraticum. The Oath.

5th week:

Lecture: Medicine in the Roman Empire. Aesculapius. Encyclopedians: Terentius Varro, Plinius, Celsus. Soranos, Dioscorides. Galenus. Hygiene and public health. Valetudinaria.

6th week:

Lecture: Medieval medicine. Monastery medicine. Byzantine healers. The great compilers. Arabian medicine, Rhases, Avicenna, Abulcasis.

7th week:

Lecture: Pandemics in history.

8th week:

Lecture: Scholastic medicine. The Renaissance. Leonardo da Vinci, Vesalius, Paracelsus.

9th week:

Lecture: Significant discoveries of the 17th - 20th centuries. Selections from the history of various medical disciplines I.

10th week:

Lecture: Significant discoveries of the 17th - 20th centuries. Selections from the history of various medical disciplines II.

11th week:

Lecture: Overviewing the history of medicine of the Middle East (since medieval ages), the American continent, Sub-Saharan Africa, South Asia (since 1500), the Far East and Australia.

12th week:

Lecture: Brief overview of the history of dentistry, pharmacy and public health.

13th week:

Lecture: History of the Hungarian Medical Education. History of the University of Debrecen and the Faculty of Medicine. Consultation.

Self Control Test

Requirements

Aim of the course: History of medicine is more than just history of a branch of science. Development of medicine in various cultures and ages had been accompanied and/or led to a number of changes in attitudes and relationships of human and nature, religions and society, with numerous turning points, paradigm shifts, major discoveries and technological development. The

aim of the course is to briefly present the history of the medicine, the development of medical thinking, decision-making, attitude and healing practice. Deepening in science history can also contribute to the appreciation of the value of the medical approach used in the everyday preventive, diagnostic and therapeutic practice of different medical disciplines. The lessons from paradigm changes may also enforce the open-mindedness, which is certainly still needed for a long time.

Exam: AW5 (written final test)

Compulsory reading: Lecture slides in pdf and supplementary materials (e-Learning folder of the course)

Recommended Readings:

Porter R.: The Cambridge Illustrated History of Medicine. Cambridge University Press, 1996.

Magner L.N., Kim O.J.: A History of Medicine. 3rd edition, CRC press, 2017.

Jackson M.: A Global History of Medicine. Oxford University Press, 2018.

Department of Pharmaceutical Chemistry

Subject: **CHEMICAL BIOLOGY**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: Structure of proteins and polysaccharides.

2nd week:

Lecture: Structure of nucleic acids

3rd week:

Lecture: Structure of macromolecular lipides.
Interactions determinating the structure of macromolecules.

4th week:

Lecture: Chemical synthesis of peptides and proteines.

5th week:

Lecture: Chemical synthesis of polysaccharides.

6th week:

Lecture: Chemical synthesis of nucleic acids

7th week:

Lecture: Molecular biology as a tool of chemical biology.

8th week:

Lecture: Methodologies of molecular biology

9th week:

Lecture: Electron spectroscopy and vibrational spectroscopy in chemical biology

10th week:

Lecture: Basics of NMR spectroscopy

11th week:

Lecture: X-ray diffraction. Theoretical calculations in chemical biology.

12th week:

Lecture: The molecular recognition.

13th week:

Lecture: Mass spectrometry in chemical biology.

14th week:

Lecture: Case studies of chemical biology.

Requirements

The aim of the course: to treat the fundamentals of modern analytical and synthetic methodologies that can be applied in biological research.

Requirements: Good knowledge of basic organic chemistry.

Teaching material will be provided at the beginning of the course.

Subject: **ILLICIT DRUGS**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Groups of drugs

2nd week:

Lecture: Designer drugs

3rd week:

Lecture: Synthetic drugs

4th week:

Lecture: Cannabis

5th week:

Lecture: THC

6th week:

Lecture: Opium

7th week:

Lecture: Morphine

8th week:

Lecture: Heroine

9th week:

Lecture: Therapy of opioid dependence

10th week:

Lecture: Coca plant

11th week:

Lecture: Cocaine

12th week:

Lecture: Psychedelic drugs

13th week:

Lecture: LSD

14th week:

Lecture: Other drugs

Department of Pharmaceutical Surveillance and Economics

Subject: **INTRODUCTION TO PHARMACOECONOMY AND - EPIDEMIOLOGY**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Lecture: **10**

Seminar: **5**

1st week:

Lecture: Introduction to Pharmacoepidemiology:

The new concept and definitions, Study design, methodology, KAY parameters in epidemiology,

Sample size, bias, confounding analysis.

2nd week:

Lecture: Drug utilization studies. Classification of outcome and exposure, Database and Data mining in practice.

3rd week:

Lecture: Measures of association, Population Attributable Risk

4th week:

Lecture: The analysis of "real life" data, assessments and trends based on big-datasets, by population

5th week:

Lecture: Systematic literature review, methodology of a metaanalysis

6th week:

Seminar: Practice of selected methodology

7th week:

Lecture: Quality of Life, questionnaires, VAS tests, validation

8th week:

Lecture: Cost of medicine, treatment, burden of diseases. Result, Efficacy and Efficiency

9th week:

Lecture: Cost of prevention in medicine, the results of changes in life-style

10th week:

Lecture: Health Technology Assessment: rationale and theory

11th week:

Lecture: The practice of Cost -benefits (CBA) and Cost-utility (CUA) analysis, ICER

12th week:

Seminar: Calculations in practice: investments and cost of drug development

Requirements

Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.

Participation in at least three (3) out of the 2 tests and two (2) practices are required for the signature. Those ones who failed will be required to pass the "semifinal test" in order to obtain signatures.

The exam will be written and oral exam at the end of the semester which covers all the topics of the semester. Written part: Test and two topics from selected list of questions.

Grade (semifinal mark) The average of the three scores (1x Test, 2x Topics) compose the final mark (1-5 final grade).

Changes for emergency phase:

Lectures and seminars are held in the form of distance learning, according to the original timetable in the form of webinar at the platform of eLearning system. Attending on-line lectures and electronic attendance register is not obligatory for students.

Attending on-line seminars and the electronic attendance register is obligatory for students.

The lecture materials are uploaded to eLearning system, this is the base of exam.

Minimum Requirements for Semester: Uploading and writing on-line exercises, small tests (altogether syllabus) that are given by the teacher at the platform of eLearning are obligatory and the completed syllabus should be uploaded.

Exam: The Dean of the Faculty could permit electronic exams.
 The final exam test and calculations will be provided via eLearning system.
 Based on the above mentioned criteria, students will be graded with a proposed mark.

Department of Metagenomics

Subject: **VACCINES**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: History of vaccination

contraindications, vaccination reactions, complications

2nd week:

Lecture: Immunological aspects of vaccination

9th week:

Lecture: Passive immunization, therapeutic vaccines

3rd week:

Lecture: Classical vaccine types, advantages and drawbacks

10th week:

Lecture: Vaccination epidemiology, herd immunity, eradication efforts

4th week:

Lecture: Nucleic acid-based vaccines, new developments

11th week:

Lecture: Sociocultural aspects, vaccine denial

5th week:

Lecture: Adjuvants, formulation of vaccines

12th week:

Lecture: Vaccine development, health industry aspects, the limitations of development

6th week:

Lecture: Classical vaccines, vaccine schedule

13th week:

Lecture: Case studies

7th week:

Lecture: Recommended vaccines

14th week:

Lecture: Exam

8th week:

Lecture: Clinical aspects, indication,

Requirements

Info & Requirements

The course is held online. Attendance of at least 80% of the classes is mandatory, otherwise the semester signature cannot be obtained. The Institute makes the material of the lectures available for the students on the e-learning site of the department.

The exam of the course is taken as a 'best test' form on the elearning site of the Institute of Metagenomics; students have 10 days to answer the test; during this time the test can be tried to

response with unlimited number and the grade will be offered based on the best result.

To successfully complete the course, a minimum of 80% is required. The Institute offers a grade of 4 for 80-89%, and 5 for 90%. If the student does not reach the level required to be passed, the Institute will provide an opportunity to improve according to the above conditions, during the exam period.

Subject: **GALENIC PREPARATIONS**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Ointments

2nd week:

Lecture: Suppositories

3rd week:

Lecture: Solutions

4th week:

Lecture: Suspensions

5th week:

Lecture: Emulsions

6th week:

Lecture: Official prescriptions 1-5

7th week:

Lecture: Official prescriptions 5-10

8th week:

Lecture: Official prescriptions 10-15

9th week:

Lecture: Official prescriptions 10-15

10th week:

Lecture: Official prescriptions 15-20

11th week:

Lecture: Official prescriptions 20-25

12th week:

Lecture: Official prescriptions 25-30

13th week:

Lecture: Official prescriptions 30-35

14th week:

Lecture: Official prescriptions 35-40,
Consultation

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn't attend 30% of lectures.

Subject: **INDUSTRIAL PHARMACEUTICAL PRACTICE**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Practical: **28**

Subject: **INTRODUCTION TO SCIENTIFIC RESEARCH**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: In vitro cell culture models.

2nd week:

Lecture: Topical drug formulation.

3rd week:

Lecture: Formulation of nanobeads.

4th week:

Lecture: Per os drug formulation.

5th week:

Lecture: Formulation of S(M/N)EDDS (self-micro/nano emulsifying drug delivery system).

Requirements

The subject will be kept in blocks.

Requirements: 30% of lectures are obligatory.

Subject: **JURISTIC KNOWLEDGE FOR PHARMACISTS**

Year, Semester: 5th year/1st semester

Number of teaching hours:

Lecture: **14**

1st week:

Lecture: Introduction to Law – Norms, Mores and Folkways, Defining Law

2nd week:

Lecture: Families of Law, Functions of Law, Classification of Law

3rd week:

Lecture: Sources of Law, Principles for resolve conflicts of Law

4th week:

Lecture: Interpretation of Law, Dispute resolution

5th week:

Lecture: Law and Ethics in Pharmacy I. – The rights of the patient

6th week:

Lecture: Law and Ethics in Pharmacy II. – Moral principles in medical practice, Ethical Codes for Pharmacists

7th week:

Lecture: Health and Pharmaceutical Care, The 7 Star Pharmacist

8th week:

Lecture: The Good Pharmacy Practice

9th week:

Lecture: Pharmaceutical Legislation

10th week:

Lecture: International Health Organisations

11th week:

Lecture: Global Health Law I.

12th week:

Lecture: Global Health Law II.

13th week:

Lecture: Case Studies (Patient Rights, Ethics)

14th week:

Lecture: consultation

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn't attend 30% of lectures.

Subject: **PHARMACEUTICAL COMPUTER ADMINISTRATION**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

pharmacy) III.

Lecture: Administration on computer II.

12th week:

Lecture: Administration on computer I.

14th week:

Lecture: Consultation.

13th week:

Requirements

Attendance of practicals is obligatory.

Altogether two absences in the semester is permitted. After absence the practical should be made up. At the end of the semester students get 5-stage practical grade.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester

Subject: **PUBLIC PHARMACY PRACTICE AFTER 1ST OR 2ND YEAR (PERSONNEL AND OBJECTIVE REQUIREMENTS OF PHARMACY AND PREPARATION OF PHARMACEUTICAL DOSAGE FORMS)**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **120**

Requirements

Syllabus of summer practice for second year pharmacy students

Duration of practice: 4 weeks, 8 hours per day, from which 2 hours may be spent preparing.

Second year students are required to gain proficiency in the following areas during their practice at a public pharmacy, and subsequently acquire knowledge about the conditions pertaining to personnel, equipment, supplies, operation, and workflow of a public pharmacy.

Requirements for the student: Accept and sign the non-disclosure agreement. Any absence from practice must be authentically justified based on the rules of the place of training. All absences must be made up. He/she is expected to follow the directions of the pharmacist in charge of the training.

Skills expected from the student after the completion of practice:

- practical application of theoretical knowledge obtained during his / her studies
- he / she is expected to know the premises and the assets of the public pharmacy and be able to obtain information from manuals and scientific journals used during his / her work
- he / she is expected to learn about the working activities of a public pharmacy
- he / she is required to have an appropriate work relationship with the co-workers in the pharmacy

Student tasks during the practice: Under the supervision of the pharmacist in charge of the training he / she will participate in the following activities:

1. Conditions pertaining to the personnel, equipment and supplies of the pharmacy:

- he / she is required to know the activities expected from the co-workers and the rules and regulations pertaining to them

- he / she is expected to know the rules of procedures
- he / she is expected to know the work protocol of the pharmacy
- he / she is required to be aware of rules and regulations pertaining to premises, equipment, supplies and assets • he / she is expected to read pharmaceutical manuals and journals
- he / she is required to handle computer programs used in the pharmacy
- he / she is expected to become acquainted with authorities supervising work in pharmacies and representative bodies

2. Preparing medicine: Acquiring knowledge about simple pharmaceutical technologies (measurement, mixing powders, dilution, calculating solution concentration and doses, and other simple calculations performed in pharmaceutical practice) Learning magistral medicine preparation and its tools Preparation of liquid medication under supervision, appropriate packaging, knowledge of the usage Evaluation: Keeping an electronic notebook: description of 1 syllabus-related practical issue in half / one page every two weeks The pharmacist in charge of the training checks the work and description every second week and evaluates it using a five-point system. He /She sends the electronic notebook to the Dean's Office according to the rules of the place of training. At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in a written form and grades the student based on a three-point system. He / she will send it to the Dean's Office in a printed and signed form according to the rules of the training place. Student evaluation: After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training place.

Subject: **PUBLIC PHARMACY PRACTICE AFTER 3RD YEAR (PREPARATION OF PHARMACEUTICAL DOSAGE FORMS, MANAGEMENT-QUALITY ASSURANCE, DISPENSING, PHARMACEUTICAL BUSINESS ADMINIST)**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Practical: **120**

Requirements

Syllabus for the practice in a public pharmacy after third year

Duration of practice: 4 weeks, 8 hours daily, from which 2 hours may be spent preparing individually The student is required to gain proficiency in the following areas during his /her practice at a public pharmacy, and subsequently acquire knowledge about pharmacy operation including dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Requirements for the student: Accept and sign the non-disclosure document. Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up. He/she is expected to follow the guidance of the pharmacist in charge of the training.

Skills expected from the student after the completion of practice:

- practical application of the theoretical knowledge obtained during his / her studies
- he / she is expected to know the premises and the assets of the public pharmacy and be able to get

information from manuals and scientific journals used during his / her work

- he / she is expected to learn about the work activities of a public pharmacy
 - he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
 - he / she is expected to know the rules and regulations pertaining to the operation of pharmacies
 - he/ she is required to explore the possibilities of communicating with patients
- The student's tasks during the practice: Under the supervision of the pharmacist in charge of the training he / she participates in the following activities:

1. Preparation of medicine. In the process he / she is required to learn: How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities The legal possibilities of changing the original prescription The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life) Documentation of preparation, and administrative obligations Storage of materials, processing of basic formulations and subsequent administrative obligations Formulations of the compendium and FoNo

2. Operation and quality assurance. In the process he / she is required to learn

- administrative work in the pharmacy
- standard procedures for workflow • how to check and document workflow
- the rules pertaining to the examining and sampling incoming medications, documentation of examinations

3. Drug dispense. In the process he / she is required to learn

- how to check the content and layout of the prescription
- the database of nutrition complements and medicinal formulae
- adequate application of the computer program. He / she is expected to get acquainted with the process and documentation of drug dispensing, and communication with patients
- the notion of pharmacy care and its practical ramifications

4. Medicine ordering. In the process he / she is required to learn:

- how to order medicine
- about narcotics and activities involving their handling
- the rules pertaining to hazardous waste

Evaluation: Keeping an electronic notebook: description of 1 syllabus-related practical problem in half / one page. The pharmacist in charge of the training checks the work and description every second week and evaluates it using a five-grade system. He /She sends the electronic notebook to the Dean's Office according to the rules of the place of training. At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place. Student evaluation: After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: **STATE EXAM PRACTICE I. PHARMACY DISPENSING I.**

Year, Semester:

Number of teaching hours:

Practical: **120**

1st week:

Lecture: Theoretical and practical knowledge of registered drug preparations, galenicals, magistral preparations,

2nd week:

Lecture: individual prescriptions

3rd week:

Lecture: dosage forms.

4th week:

Lecture: the theoretical and practical knowledge of vaccines, immunosera, and sutures for human and veterinary use

5th week:

Lecture: The basic knowledge of medical aid products, equipments and machines for

pharmaceutical preparations.

6th week:

Lecture: Basic knowledge of pharmacy management,

7th week:

Lecture: pharmaceutical affairs organizations and juristic knowledge for pharmacists. Pharmacy organizations.

8th week:

Lecture: Knowledge of measurement conversion and the International System of Units (SI). Basic knowledge of biopharmacy, pharmacology and pharmacognosy. Control of pharmaceutical preparations.

Requirements

Syllabus for the practice in a public pharmacy before final examination

Duration of the practice is 2+4 months, 8 hours daily, from which two hours may be spent on preparing individually. Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Requirements for the student: Accept and sign the non-disclosure document. Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up. He/she is expected to follow the guidance of the pharmacist in charge of the training. The expected skills made on the student after completion of the practice: •practical application of the theoretical knowledge obtained during his / her studies,

•the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,

•he / she is required to have an appropriate working relationship with the co-workers at the pharmacy

•he/ she is expected to communicate with the patients in an appropriate way,

•he / she is required to appropriately inform and give advice in connection with the patients' questions regarding self-healing and preparations without prescription (drugs and other products),

•He / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help. The student's tasks during the practice: Under the supervision and instructions of the pharmacist in charge of the training he / she participates in the following activities:

1. Drug Dispense. In the process he / she is required to learn:

•how to check the content and layout of the prescription

- the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name,
- appropriate patient information knowing the effects and adverse effects of drugs,
- recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement),
- characteristic/obligatory cases and methods of medical information and consultation,
- duties in connection with the known/identified adverse effects of drugs,
- adherence control and means of correction, common uses,
- the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose,
- the possibilities and rules of access to data regarding the patients' previous medication (OEP database),
- the database of nutrition complements and medicinal formulae
- proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:

- How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
- The legal possibilities of changing the original prescription
- The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
- Documentation of preparation, and administrative obligations
- Storage of materials, processing of basic formulations and subsequent administrative obligations
- Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to learn:

- administrative work in the pharmacy
- the rules concerning the staff of the pharmacy; qualification, labor law requirements,
- standard procedures for workflow
- how to check and document workflow
- the rules pertaining to the examining and sampling incoming medications,
- documentation of examinations

4. Medication management. In the process he / she is required to learn:

- aspects of inventory management,
- how to order medicine
- duties in case of waste products, returned items, damage,
 - withdrawal of products from circulation,
- duties regarding shift of prices,
- closings: daily, weekly, periodic as well as schedule of OEP reports,
- importance and practice of supervision of prescriptions,
- about narcotics and activities involving their handling,
- the rules pertaining to hazardous waste.

Evaluation: Keeping an electronic workbook: the description of two practical problems in half/one page weekly. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic

notebook to the Dean's Office according to the rules of the place of training. The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student. At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place. Student evaluation: After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: **STATE EXAM PRACTICE I. PRESCRIPTION PHARMACY I.**

Year, Semester:

Number of teaching hours:

Practical: **120**

Requirements

Duration of the practice is 2+4 months, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Accept and sign the non-disclosure document.

Absence from practice must be authentically justified based on the rules of the place of training.

Absences must be made up.

He/she is expected to follow the guidance of the pharmacist in charge of the training.

- practical application of the theoretical knowledge obtained during his / her studies,
- the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,
- he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
- he/ she is expected to communicate with the patients in an appropriate way,
- he / she is required to appropriately inform and give advice in connection with the patients' questions regarding self-healing and preparations without prescription (drugs and other products),
- He / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

Under the supervision and instructions of the pharmacist in charge of the training he / shethe

following activities:

1. Drug Dispense. In the process he / she is required to learn:

- how to check the content and layout of the prescription
- the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name,
- appropriate patient information knowing the effects and adverse effects of drugs,
- recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement),
- characteristic/obligatory cases and methods of medical information and consultation,
- duties in connection with the known/identified adverse effects of drugs,
- adherence control and means of correction, common uses,
- the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose,
- the possibilities and rules of access to data regarding the patients' previous medication (OEP database),
- the database of nutrition complements and medicinal formulae
- proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:

- How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
- The legal possibilities of changing the original prescription
- The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
- Documentation of preparation, and administrative obligations
- Storage of materials, processing of basic formulations and subsequent administrative obligations
- Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to learn:

- administrative work in the pharmacy
- the rules concerning the staff of the pharmacy; qualification, labor law requirements,
- standard procedures for workflow
- how to check and document workflow
- the rules pertaining to the examining and sampling incoming medications,
- documentation of examinations

4. Medication management. In the process he / she is required to learn:

- aspects of inventory management,
- how to order medicine
- duties in case of waste products, returned items, damage,
- withdrawal of products from circulation,
- duties regarding shift of prices,
- closings: daily, weekly, periodic as well as schedule of OEP reports,

- importance and practice of supervision of prescriptions,
- about narcotics and activities involving their handling,
- the rules pertaining to hazardous waste.

Keeping an electronic workbook: the description of two practical problems in half/one page weekly. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean's Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student's overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean's Office in a printed and signed form according to the rules of the training place.

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: VETERINARY HYGIENE, VETERINARY PHARMACOLOGY-SELECTED CHAPTERS

Year, Semester: 4th year/1st semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Government veterinary services. Veterinary public health. One health.

2nd week:

Lecture: The Hungarian animal health system's organizational structure, operation, and legal regulation.

3rd week:

Lecture: Pharmaceutical dosage forms and methods of application in veterinary medicine, with particular attention to other than human medicine. Medicines classification, and prescription rules.

4th week:

Lecture: Major drug side effects and interactions. Drug sensitivity, incompatibility. Pharmacovigilance system operation. Formule Normales Veterinariae (FoNoVet).

5th week:

Lecture: Antimicrobial agents used in veterinary medicine. Antimicrobial resistance. Antibiotics.

6th week:

Lecture: Antiviral agents used in veterinary medicine.

7th week:

Lecture: Antifungals used in veterinary medicine.

8th week:

Lecture: Vaccines, and serums used in veterinary medicine.

9th week:

Lecture: Parasitic diseases and their medical treatment I. Anthelmintic, anticoccidials, and other antiprotozoal drugs.

10th week:

Lecture: Parasitic diseases and their medical treatment II. Ectoparasiticides.

11th week:

Lecture: Zoonosis-animal diseases transmissible to humans I.

12th week:

Lecture: Zoonosis-animal diseases transmissible to humans II. Disinfectants and antiseptics.

13th week:

Lecture: Anaesthetics, analgesics, and anti-inflammatory drugs used in veterinary medicine.

14th week:

Lecture: Veterinary drugs used in hormonal, endocrine, and reproductive disorders.

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam.

Requirements for signing the lecture book: The Department may refuse to sign the lecture book if the student didn't attend 30% of lectures.

Department of Physical Chemistry

Subject: **POLYMORPHISM OF PHARMACEUTICALS**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **28**

1st week:

Lecture: Introduction. Polymorphism, definition. Polymorphism in everyday life and pharmaceutical industry. Analytical methods. Ritonavir and cefuroxime.

2nd week:

Lecture: Thermodynamics. Basics of thermoanalytical methods and their application in polymorph research. Monotrope and enantiotrope systems.

3rd week:

Lecture: Patent literature basics. Claims. Polymorphs in the patents. Ranitidine hydrochloride and paroxetine hydrochloride.

4th week:

Lecture: Thermodynamics and kinetics of crystallization. Controlling polymorph composition. The Aspartame case.

5th week:

Lecture: Computational chemistry. Polymorph prediction.

6th week:

Lecture: Basics of X-ray diffraction. Powder diffraction methods. Quantitative XRPD.

7th week:

Lecture: Single crystal X-ray diffraction.

Structure of polymorphs. The hydrogen bond.

8th week:

Lecture: Ab initio structure determination from powder diffraction data. Indexing, Rietveld refinement.

9th week:

Lecture: Solid state NMR basics. ssNMR in polymorph research.

10th week:

Lecture: FT-IR and Raman spectroscopy and microscopy. ATR techniques.

11th week:

Lecture: Polymorphism - quality control issues

12th week:

Lecture: Polymorphism of dyes and explosives.

13th week:

Lecture: Crystallographic databases. CSD, polymorph structures in the Database.

14th week:

Lecture: Regulatory questions of polymorphism. FDA, ICH, EMEA rules, Q6A. Case studies. Polymorphism of chocolate

Requirements

Entrance conditions: successful final exam on Pharmaceutical technology II., at least 5 students.

Department of Physiology

Subject: **MODERN TECHNIQUES ALLOWING THE INVESTIGATION OF PHYSIOLOGICAL PHENOMENA**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **20**

1st week:

Lecture: Application of electrophysiological techniques in the investigation of the electric activities of living cells.

2nd week:

Lecture: Methods allowing the monitoring of the intracellular Ca²⁺ concentration in living cells.

3rd week:

Lecture: Analysis, evaluation and interpretation of current recordings. Biostatistics.

4th week:

Lecture: Preparation of neurones for functional investigation. Possible advantages and disadvantages of the applicable methods.

5th week:

Lecture: Investigation of the signal transducing proteins at the levels of proteins, RNA or DNA (immunocytochemistry, immunohistochemistry, confocal microscopy, Western blot, quantitative [real-time] PCR).

6th week:

Lecture: Cell and tissue culture (primary cultures, cell lines, organ cultures).

7th week:

Lecture: Isolation and identification of contractile proteins by biochemical methods.

8th week:

Lecture: Measurements conducted on isolated ion channels: the bilayer technique.

9th week:

Lecture: tutorial

10th week:

Lecture: Final Assessment.

Requirements

1. Signature of the semester

Lecture attendance may be followed up by the Department. The lecture will not be delivered if 5 or fewer students show up. Nevertheless, the lecture material is going to be asked in the final assessment.

For continuous updates on all education-related matters, please check the elearning.med.unideb.hu web site (Department of Physiology menu item).

2. Evaluation during the semester

None.

3. Examination

At the end of the course a written final assessment will be organized in the form of multiple choice questions. The result of this assessment will determine the verification mark of the credit course using the following conversion table:

0-39.9%	Failed
40-54.9	Pass
55-69.9%	Satisfactory
70-84.9%	Good
85-100%	Excellent

Subject: **PROBLEM BASED LEARNING IN PHYSIOLOGY**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: The practices are listed at the web site

of the elearning.med.unideb.hu web site
(Department of Physiology menu item).

Requirements

1. Signature of the semester

This is an individual project oriented program. The signature of the semester may be refused if the project report is not submitted before to the deadline.

2. Evaluation during the semester

No mid-semester evaluation.

3.Examination

The evaluation is based on the project report submitted before the deadline. For specifics, see the rules below and consult with the elearning.med.unideb.hu web site (Department of Physiology menu item).

Aims of the course: The program offers carefully selected and designed problems from the field of Physiology. Students can learn how to apply problem solving approach, self-conducted strategy and analytic thinking in resolving selected problems. Skill in team-work is helpful in the program.

- 1.The program is conducted between 3rd and 11th academic weeks of the second semester.
- 2.Students must have a tutor, this is the prerequisite for the program. Tutor can be any professor of the Department, not only the student's seminar/practical instructor. The applicant should contact the chosen professor and request him/her to undertake the tutorship. Professors of the Department maintain the right to accept or refuse to be the tutor of an applicant.
- 3.Special Rule: the applicant has to organize the chosen project and register at the tutor (NOT via NEPTUN) until the end of first academic week. Applications after the first week are not accepted.
- 4.Preconditions for the program: mark three (3) or better in Physiology I and permission of the Department (arranged by the tutor).
- 5.The maximum number of participants in the program cannot exceed 100 students. In case, the number of applicants is higher than 100, the seminar/practical instructor or the course coordinator can refuse applicants with mark three or better.
- 6.Two students works in team on one project, and prepare one mutual report, thus they get the same score at the end of the program regardless their contribution. The Journal Club and Lab Visit programs are carried out individually.
- 7.Evaluation of the students is based on the written report or the oral presentation using five grade score system (1-5). Grades are final, no make-up is allowed.
- 8.The list of offered programs is available at the practical lab of the elearning.med.unideb.hu web site (Department of Physiology menu item).
- 9.The deadline for the program is the end of the 11th academic week. Reports should be submitted to the tutor. Missing the deadline automatically results grade 1 (fail).
10. Detailed information for the program can be accessed on the elearning.med.unideb.hu web site (Department of Physiology menu item).

Subject: **THE REGULATORY ROLE OF THE CELL MEMBRANE IN PHYSIOLOGICAL AND PATHOLOGICAL CONDITIONS**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **20**

1st week:

Lecture: Introduction, a general characterisation of the cell membrane. The electrical and biochemical characteristics of the surface membrane.

2nd week:

Lecture: General description of cardiac ionic currents. The connection between excitatory processes and the regulation of $[Ca^{2+}]_i$

3rd week:

Lecture: $[Ca^{2+}]_i$ dependent excitatory processes in the surface membrane of cardiac cells.

4th week:

Lecture: The structure of the skeletal muscle. Ionic channels underlying the excitability of the skeletal muscle. Molecular structure of ionic channels.

5th week:

Lecture: Changes in surface membrane function in inherited skeletal muscle disorders: degenerative forms (muscle dystrophies). Changes in surface membrane function in

inherited skeletal muscle disorders: alterations in the muscle tone (myotonies).

6th week:

Lecture: The role of the surface membrane in the regulation of calcium homeostasis in neurons. Pathological conditions arising from abnormal calcium handling in neurons.

7th week:

Lecture: Changes in the membrane properties of the neurons under pathological conditions. Pathological conditions arising from the hyperexcitability of neurons.

8th week:

Lecture: The role of TRP channels in the regulation of biological processes of human skin cells. TRP-pathies.

9th week:

Lecture: The role of the endocannabinoid system in the transmembrane signaling of skin-derived cells. Is the human skin always "high"?

Requirements

1. Signature of the semester

Lecture attendance may be followed up by the Department. The lecture will not be delivered if 5 or fewer students show up. Nevertheless, the lecture material is going to be asked in the final assessment.

For continuous updates on all education-related matters, please check the elearning.med.unideb.hu web site (Department of Physiology menu item).

2. Evaluation during the semester

None.

3. Examination

At the end of the course a written final assessment will be organized in the form of multiple choice

questions. The result of this assessment will determine the verification mark of the credit course using the following conversion table:

0-39.9%	Failed
40-54.9%	Pass
55-69.9%	Satisfactory
70-84.9%	Good
85-100%	Excellent

Division of Biomathematics

Subject: **COMPUTER SCIENCE**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Practical: **28**

1st week:

Practical: Exemption Tests.

2nd week:

Practical: Word processor programs, MS Word I.

3rd week:

Practical: Word processor programs, MS Word II.

4th week:

Practical: Word processor programs, MS Word III.

5th week:

Practical: Fundamentals and basic concepts of informatics.

6th week:

Practical: Logical and physical realization of networks.

7th week:

Practical: Internet

8th week:

Practical: Spreadsheets programs, MS Excel I.

9th week:

Practical: Spreadsheets programs, MS Excel II.

10th week:

Practical: Spreadsheets programs, MS Excel III.

11th week:

Practical: Practical: Spreadsheets programs, MS Excel IV.

12th week:

Practical: Practical: Computerised presentation, MS PowerPoint.

13th week:

Practical: Practical: Summary.

14th week:

Practical: Practical: Test.

Requirements

The acquisition of fundamental theoretical and practical knowledge from the function of the modern personal computers. Course description: PC architecture, operating systems, file management, network knowledge, internet and its opportunities of application, word processor,

spreadsheet, the usage of presentational programs, the achievement of scientific databases and its use.

Without registration, there is no way to do the course! First year students who missed/skipped the exemption test, but signed up for the course in the Neptun must attend the course and do the final test at the end. For students attending the informatics course a maximum of 4 absences are allowed during the semester to receive a signature (we recommend to use as few as possible, in case an emergency comes up). This is taken very seriously! Missing more than 4 classes automatically means losing the chance to pass the course. There will be a final test at the end of the semester. Students are allowed to make up the missed practices with another group but only on the given week, if there are enough free seats in the room.

The course starts with an exemption test. Only first year students are allowed to write the exemption test at the first week of the given semester with their group (appointment should be checked in the given timetable). In any other cases (students older than first year/repeaters/students who are not exempted) students have a final test at week 14 of the given semester. There is no other self-control test during the semester. At the end of the course students will write a final test. The exemption and the final tests covers topics and skills in connection with Microsoft office Word, Excel, and PowerPoint (versions:2016) programs, as written in the curriculum. Both of the tests (exemption and the final test) are written tests. The tests are practical tests, conducted in the computer room. Students passing the exemption test will automatically receive grade 5 (excellent) at the end of the semester. Final grades based on the final test score will be given according to the followings: 0-60% = grade 1 (fail); 61%-70% = grade 2 (pass); 71% - 80% = grade 3 (satisfactory); 81% - 90% = grade 4; (good) 91% = grade 5 (excellent). Students should download free Office guidebooks from the internet offered at the webpage of the course (Email registration is required for downloading files). Students who did not get exemption/did not show up at the exemption test/repeaters/students older than first year **MUST ATTEND** on the course. They should join to one of the groups mentioned in the timetable. The number of seats is limited in the classroom. Students who has informatics course in the given appointment (according to the timetable) have priority to attend the lesson. Others are allowed to join to the given group if there are free seats. Older students have to do the whole course as well. Students passing the exemption test will automatically receive grade 5 (excellent) grade at the end of the semester. Students who failed the exemption test must attend the course and do the final test at the end. Students who have ECDL (European Computer Driving Licence) or are not required to write the exemption test, they should show their ECDL certificate to the educational manager of the department and they will be exempted automatically.

Division of Biophysics

Subject: **MODERN BIOPHYSICAL METHODS IN BIOLOGY AND MEDICINE**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: **24**

3rd week:

Lecture: Luminescence spectroscopy. Theoretical and technical background and principles of

application of fluorescence spectroscopy.
Fluorescence conjugation of biomolecules,
techniques based on fluorescence resonance

energy transfer.

4th week:

Lecture: Selected applications of Magnetic Resonance Imaging: exploitation of molecular motions.

5th week:

Lecture: Modern microscopy methods for structural and functional characterization of cells. Theoretical background of fluorescence microscopy and image processing. Generation of scanning and wide-field images. Detectors, analog/digital conversion and digital storage of images. Digital image analysis: principles and biological applications. Principles of confocal microscopy. High resolution non-linear optical microscopy.

6th week:

Lecture: Principles and applications of flow cytometry. Structure of a flow cytometer and its application fields: immunogenetics, receptor and antigen research and diagnostics, DNA and cell cycle analysis, measurement of membrane potential, membrane permeability and determination of cytosolic pH and ion concentrations, application of fluorescence resonance energy transfer to determine protein associations. (FCET).

7th week:

Lecture: Structure of the cell membrane, functional consequences of the mobility (lateral and rotational movement) of proteins in the membrane. Novel models for the structure of the cell membrane, lipid domains. Time-dependent fluorescence and phosphorescence spectroscopy, fluorescence recovery after photobleaching (FRAP), fluorescence correlation spectroscopy.

8th week:

Lecture: Modern electrophysiological techniques. Passive and active electrical properties of the cell membrane, structure and function of ion channels. Principles and application of the patch clamp technique: recording ionic currents and membrane potential.

9th week:

Lecture: LSC - Laser-Scanning Cytometry (imaging cytometry, slide-based imaging cytometry). Limitations of flow cytometry and microscopy. Comparing flow cytometry, confocal microscopy and laser-scanning cytometry. How does laser-scanning cytometry work? Strength and limitations of the laser-scanning cytometry. Laser scanning-cytometry in cell biology and clinical research.

10th week:

Lecture: Closing test

Requirements

Aim of the course: Based on the principles covered in biophysics and cell biology discussion of problems with special relevance to medical biology from a modern molecular biophysical and quantitative biological aspect.

Short description of the course topics:

1. Application of nuclear magnetic resonance spectroscopy (NMR) and imaging (MRI) in biology and medicine
2. Luminescence spectroscopy.
3. Flow cytometry and its applications.
4. Structure of the cell membrane, mobility of lipids and proteins in the plasma membrane.
5. Advanced microscopy.
6. Modern electrophysiological techniques
7. Slide-based cytometry.

Compulsory literature: course material and lecture slides published on the website of the Department

Recommended reading: Medical biophysics (Damjanovich, Fidy, Szöllősi Eds.), Medicina, 2009;

Web address for the course material: http://biophys.med.unideb.hu/en/elect_bpmethods_lecture.htm

Type of examination: practical grade, 5 levels

Conditions for signing the lecture book:

Attending 5 lectures out of 7. Attention! Lecture books are handled exclusively by the study advisor during the dedicated office hours!

Type of examination: practical grade, 5 levels

Examination: Written test. The exam date is shown in the curriculum

below 50%: fail

50%-59%: pass

60-69 %: satisfactory

70-79 %: good

>= 80% excellent

Repeated/improved exam: during the examination period, one occasion, written test.

CHAPTER 22

TITLES OF THESES

Department of Physical Chemistry

1. Title: Polymorphism and cocrystals of an API
Tutor: Attila Bényei Ph.D. habil.
2. Title: Polymorphism of pharmaceuticals: regulatory and quality assurance issues
3. Title: Use of crystallographic databases to compare compound families
Tutor: Attila Bényei Ph.D. habil.

Department of Anatomy, Histology and Embryology

1. Title: Possible applications of morphofunctional matrices for classification of neurons (computer modelling)
Tutor: Ervin Wolf M.Sc., Ph.D.
2. Title: Correlation analysis of functional brain maps
3. Title: Investigation of contour integration processing in the primary visual cortex using voltage sensitive dye imaging
Tutor: Zoltán Kisvárdy M.Sc., Ph.D., D.Sc.
4. Title: Investigation of signalling mechanisms that regulate cartilage development and maturation
Tutor: Róza Zákány M.D., Ph.D.
5. Title: Interrogation of spinal dorsal horn circuits with electrophysiological and optogenetic tools
6. Title: Light- and electron microscopy level analysis of the axons and axon collaterals of spinal lamina I projection neurons
7. Title: Local synaptic connections of projection neurons in spinal lamina I
8. Title: Morphometric analysis of excitatory and inhibitory interneurons in the spinal dorsal horn
Tutor: Péter Szücs M.D., Ph.D.
9. Title: Extracellular matrix in the developing brainstem
Tutor: Ildikó Wéber M.Sc., Ph.D.

10. Title: Matrix metalloproteases in vestibular lesion

Tutor: Botond Gaál M.Sc., Ph.D.

11. Title: Investigation of neuronal network development in the spinal cord

Tutor: Zoltán Mészár M.Sc., Ph.D.

12. Title: The role of the molecular clock in healthy and osteoarthritic chondrocytes

Tutor: Csaba Matta M.Sc., Ph.D.

13. Title: Role of PACAP signalling in cartilage differentiation and regeneration

Tutor: Tamás Juhász M.Sc., Ph.D.

14. Title: Distribution of the extracellular matrix in the red nucleus and parabrachial area

Tutor: Éva Rácz M.Sc., Ph.D.

15. Title: The endocannabinoid-mediated modulation of spinal nociception

16. Title: The role of astrocytes in spinal pain processing

Tutor: Zoltán Hegyi M.Sc., Ph.D.

17. Title: Quantitative morphological studies of primary afferent-motoneuron connections in the frog's brainstem

Tutor: András Birinyi M.Sc., Ph.D.

18. Title: Role of pro-inflammatory cytokines in neuron-glia interaction during inflammatory pain states

Tutor: Krisztina Holló M.Sc., Ph.D.

19. Title: Mapping of synapses on dendrites of GABAergic neuron subtypes in the cerebral cortex

Tutor: Petra Talapka Ph.D.

Department of Biophysics and Cell Biology

1. Title: Interference of chelidonine with STAT3 signaling in human T lymphoma cells
Tutor: Andrea Dóczy-Bodnár

2. Title: Pharmacology of ion channels.

Tutor: Ferenc Papp

3. Title: Investigation of direct ligand-like effects of cyclodextrins on KV7.4 ion channel

Tutor: Florina Zákány

4. Title: Studying the inactivation of voltage gated potassium ion channels in heterologous expression systems.

Tutor: György Panyi

5. Title: Studying nuclear receptor function by modern microscopy techniques

Tutor: György Vámosi

6. Title: Intracrine signaling by membrane receptors

Tutor: György Vámosi

7. Title: Elucidation of the catalytic mechanism of ABC transporters

Tutor: Katalin Goda

8. Title: Study of ion channels pharmacology with animal venoms

Tutor: Péter Hajdu

9. Title: Role of T cell ion channels in tumor cell elimination

Tutor: Péter Hajdu

10. Title: Quantitative investigation of the associations of ErbB proteins using biophysical and molecular biological methods

Tutor: Péter Nagy

11. Title: How do cell penetrating peptides cross the cell membrane?

Tutor: Péter Nagy

12. Title: Examination of the membrane dipole potential in hypercholesterolemic mice

Tutor: Tamás Kovács

13. Title: Cytometry of cytotoxic lymphocytes

Tutor: Zsolt Bacsó

14. Title: Physiological roles of the multidrug resistance transporter P-glycoprotein.

Tutor: Zsolt Bacsó

15. Title: Functional characterization of de novo ion channel mutations in epilepsy

Tutor: Tibor G. Szántó

16. Title: Investigation of the inhibitory mechanism of NaV channels by 5-chloro-2-benzimidazole (ClGBI)

Tutor: Tibor G. Szántó

17. Title: Pharmacological studies on KV1.3 ion channel.

Tutor: Tibor G. Szántó

18. Title: Studying the interdomain

communication in ABCG2

Tutor: Katalin Goda

19. Title: Pharmacology of arrhythmogenic cardiac ion channel mutations

Tutor: Zoltán Varga

20. Title: Characterization of mutant ion channels expressed in tumor cells

Tutor: Zoltán Varga

Department of Anesthesiology and Intensive Care

1. Title: Experimental testing of the neuromuscular junction

Tutor: Ákos Fábián M.D., Ph.D.

2. Title: Preemptive and preventive analgesia

Tutor: Béla Fülesdi M.D., Ph.D., D.Sc.

3. Title: The role of hypothermia in neuroprotection

Tutor: Csilla Molnár M.D., Ph.D.

4. Title: Clinical studies in the field of neuromuscular block and its reversal

Tutor: Adrienn Pongrácz M.D., Ph.D.

Department of Behavioural Sciences

1. Title: End of Life Decisions

Tutor: Sándor Kömüves M.A., Ph.D.

2. Title: Bioethical and biopolitical challenges of modern health care (Faculty of Medicine)

3. Title: Ethical and health policy aspects of the research and clinical use of controlled substances (Faculty of Medicine)

Tutor: János Kristóf Bodnár M.A., Ph.D.

4. Title: Biopolitical and bioethical approaches to modern health problems

5. Title: Ethical issues of science and technology

6. Title: Gender issues in biopolitics and bioethics

7. Title: Questions of modern environmental ethics

Tutor: Ms. Szabina Péter Ph.D.

Division of Cardiac Surgery

1. Title: Literature review of the intracardiac tumors

Tutor: Ákos Attila Berczi M.D.

2. Title: The off- label use of the sutureless biological aortic valve prosthesis

Tutor: Péter Csizmadia M.D

3. Non-occlusive mesenteric ischaemia after cardiac surgery-review of the literature

Tutor: Tamás Debreceni M.D.

4. Title: Mid-term results of transcatheter aortic valve implantations - review of the literature

Tutor: Tamás Maros M.D.

5. Title: Sutureless aortic valve implantation - review of the literature

Tutor: Lehel Palotás M.D.

6. Title: Middle and long term results of Perceval S sutureless aortic bioprosthesis implantation-overview of the literature-

Tutor: Tamás Szerafin M.D., Ph.D.

Department of Public Health and Epidemiology

1. Title: 1. Migration of health workers in the European Union with a focus on regulation 2. Mutual recognition of diplomas in the European Union: a historical overview 3.

Prevention and management of diabetes in the EU Member States, with reference to regulation 4. The burden of diabetes in the EU Member States 5. Burden of disease of complications of diabetes mellitus in the EU Member States

Tutor: Orsolya Varga M.D., Ph.D., habil., D.Sc.

2. Title: 1. Mental health of youth 2. Interventions to improve the mental health of youth 3. Mental health of health care workers 4. Interventions to improve the mental health of health care workers 5. Relationship between health literacy and health status (only for dentist students) 6. Relationship between health literacy and medication adherence (only for pharmacist students)

Tutor: Éva Bíró M.D., Ph.D., D.Sc.

3. Title: 1. Sociodemographic, environmental and lifestyle determinants of obesity 2. The

effect of neighborhood environment on physical activity and diet 3. The effect of dietary interventions on the risk of chronic non-communicable diseases 4. Use of Healthy Eating index for the characterization of diet quality 5. Prevalence and determinants of dietary supplement use (only for pharmacist students) 6. Patterns and correlates of anabolic androgenic steroid use (only for pharmacist students) 7. Associations between diet quality and dental caries (only for dentist students) 8. Socioeconomic and lifestyle determinants of dental caries (only for dentist students)

Tutor: Helga Bárdos M.D., M.Sc., Ph.D.

4. Title: 1. Contaminants of traditional Chinese and Indian medicines 2. Morbidity and mortality from oral cavity cancers in selected European countries 3. Toxicology of fluorides 4. Effect of smoking on drug metabolism 5. Toxicology of zinc

Tutor: Sándor Szűcs M.Sc., Ph.D.

5. Title: 1. Evaluation of chronic care for adult overweighted in general medical practice 2. Evaluation of chronic care for adult smokers in general medical practice 3. Evaluation of chronic care for diabetes mellitus in general medical practice 4. Evaluation of chronic care for hypertension in general medical practice 5. Social inequalities in health 6. Disease burden of rare diseases 7. Evaluating effectiveness of population based screenings 8. Nutritional habit in the first trimester of pregnancy

Tutor: János Sándor M.D., Ph.D., D.Sc.

6. Title: 1. Assessment of health risks of micro- and nano-encapsulated plant protection products: a systematic literature review 2. Investigation of the DNA damaging potential of plant protection products using genotoxicological methods 3. Comparative assessment of the cytotoxic effect of glyphosate and glyphosate based herbicides 4. Assessment of health risks of micro- and nanoencapsulated plant protection products: a systematic literature review 5. Assessment of

ergonomic risk factors among workers in different professions

Tutor: Károly Nagy M.Sc. Ph.D.

7. Title: 1. Alcohol consumption and human immunodeficiency virus infection 2. Pharmacological treatment of alcohol use disorders 3. Alcohol use by adolescents in Europe between 1993 and 2019 4. Alcohol use in the European Union 5. Health effects of flame retardants

Tutor: László Pál M.Sc., Ph.D.

8. Title: 1. Analyses of workforce crisis in Hungarian general practices 2. Frequency of influenza vaccination among chronic diseased patients in Hungary: A general practice based investigation

3. Frequency of influenza vaccination among the elderly: A general practice based investigation 4. Impact of COVID-19 pandemic on stroke and AMI frequency in Hungary 5. Impact of COVID-19 pandemic on pregnancy outcomes

Tutor: Ferenc Vincze M.Sc., Ph.D.

9. Title: 1. Investigation of the global burden of chronic non-communicable diseases 2. Investigation of the global burden of chronic non-communicable diseases regarding socio-economic development 3. Trends in mortality from non-communicable diseases 4. Prevalence of complications due to diabetes mellitus in Europe 5. Socioeconomic determinants of diabetes mellitus complications across Europe Tutor: Nóra Kovács M.Sc., Ph.D.

10. Title: 1. Health and health behaviour of adolescents 2. Problematic internet use among adolescents 3. Health promotion opportunities among school-aged children

Tutor: Gabriella Péntes M.Sc., Ph.D.

11. Title: 1. The public health aspects mental disorders 2. Screening and treatment methods of hazardous and harmful patterns of alcohol consumption 3. Suicide prevention strategies 4. The public health aspects of childhood mental disorders

Tutor: Judit Diószegi, M.D., Ph.D.

12. Title: 1. Exposure to volatile organic compounds in healthcare settings

Tutor: Szabolcs Lovas, MSc., PhD

13. Title: 1. The problem of therapy resistance in cancer

Tutor: István Szász, MSc., Ph.D.

14. Title: 1. Genetic alteration and gene expression modulation during cancer progression Tutor: Viktória Koroknai, MSc., Ph.D.

Division of Cardiology

1. Title: Less invasive measurement of coronary macro- and microvascular function

Tutor: Zsolt Kőszegi M.D., Ph.D.

2. Title: The importance of hydrostatic pressure during invasive intracoronary physiological measurements

Tutor: Áron Üveges M.D.

3. Title: Clinical and electrocardiographic predictors of cardiac resynchronization therapy required due to pacemaker-induced cardiomyopathy

Tutor: László Tibor Nagy M.D., Ph.D.

4. Title: A comparative study for the use of transtelephonic ECG in acute coronary syndrome

Tutor: Ildiko Racz MD, PhD.

5. Title: Pericardial fat tissue

6. Title: Safety antidiabetic therapy

Tutor: Tibor Fülöp M.D., Ph.D.

7. Title: Structural interventions in cardiology

Tutor: Attila Kertész M.D., Ph.D.

8. Title: Pre-TAVI investigations - CT in focus.

9. Title: Novel approaches in the treatment of acute and chronic heart failure

Tutor: Attila Borbély M.D., Ph.D.

10. Title: Assessment of the right heart side by 3D echocardiography

11. Title: The role of 3D echocardiography in mitral valve disease

Tutor: Csaba Jenei M.D.

12. Title: Oncocardiology

Tutor: Dániel Czuriga M.D., Ph.D.

13. Title: Comparison of STEMI and NSTEMI cases after primary PCI: the role of secondary prevention

Tutor: László Fülöp M.D., Ph.D.

14. Title: Efficacy of platelet aggregation inhibitors after acute coronary syndrome

15. Title: Vascular disease in patients post myocardial infarction

Tutor: Orsolya Tímár M.D., Ph.D.

16. Title: Vascular alterations in patients with previous acute coronary syndrome

Tutor: Orsolya Tímár M.D., Ph.D.

17. Title: Atrial fibrillation and new oral anticoagulant therapy

Tutor: Gábor Kolodzey M.D.

18. Title: Gestational hypertension management at the Department of Cardiology, University of Debrecen.

Tutor: Alexandra Kiss M.D., Ph.D.

Department of Botany

1. Title: Stress tolerance and resistance mechanisms of higher plants

Tutor: Ilona Mészáros M.Sc., Ph.D., C.Sc.

2. Title: The study of chromatin and microtubule organization in cells of higher plants

Tutor: Csaba Máthé M.Sc., Ph.D.

3. Title: Plant bioactive compounds

Tutor: Gábor Vasas M.Sc., Ph.D., D.Sc.

4. Title: Role of glycoproteins in infection and immunology (bibliographic)

Tutor: János Kerékgyártó M.Sc., Ph.D., C.Sc.

Division of Clinical Physiology

1. Title: Improvement of myocardial inotropy under physiological and pathological conditions

Tutor: Zoltán Papp M.D., Ph.D., D.Sc.

2. Title: The role of angiotensin II in cardiovascular diseases

3. Title: Vascular alterations leading to hypertension.

Tutor: Attila Tóth M.Sc., Ph.D., D.Sc.

4. Title: Angiotensin converting enzymes in the laboratory diagnostics

5. Title: Endogenous regulation of the renin-angiotensin-aldosterone system and its clinical significance

Tutor: Miklós Fagyas M.D., Ph.D.

6. Title: Investigation of sex differences in chemotherapy-induced cardiac dysfunction

7. Title: Modulation of sarcomeric dysfunction in hypertrophic cardiomyopathy

8. Title: HIIT versus Continuous Training: different pathways to the development of the Athlete's heart

9. Title: Investigation of left ventricular functional changes under different hemodynamic loads

Tutor: Beáta Bódi M.Sc., Ph.D.

Division of Nuclear Medicine and Translational Imaging

1. Title: Importance of FDG PET/CT in cardiology

2. Title: Metabolic parameters in correlation with different oncological therapies

3. Title: Targeted radionuclide therapies in metastatic prostate cancer

4. Title: Targeted radionuclide therapies in neuroendocrin tumors

Tutor: Ildikó Garai M.D., Ph.D.

5. Title: In vivo imaging of preclinical animal models using tumor-specific radiopharmaceuticals

Tutor: György Trencsényi M.Sc., Ph.D.

Division of Radiology and Imaging Science

1. Title: Functional MRI Investigations in Internet Gaming Addiction Disorder

Tutor: Attila Mátyás Pétró M.D.

2. Title: AI in acute stroke treatment

Tutor: Róbert Rostás M.D.

3. Title: Imaging of axial spondylarthritis

Tutor: Márton Oláh M.D.

4. Title: The effect of prenatal ultrasound on the development of neurons

Tutor: Bence Pelyvás M.D.

Department of Medical Imaging

1. Title: Posttherapeutic I-131 whole body SPECT/CT in patients with thyroid cancer
2. Title: The role of Tc99m-Tektrotyd SPECT/CT to evaluate metastatic neuroendocrine tumors
Tutor: Ildikó Garai M.D., Ph.D.
3. Title: Endovascular Aortic Aneurysm Repair
Tutor: István Lázár M.D.
4. Title: Characteristics of acute endovascular stroke treatment with and without intravenous thrombolysis
Tutor: Balázs Kis M.D.

Department of Medical Genetics

1. Title: Transcriptional regulation of immune responses.
Tutor: Lajos Széles M.Sc., Ph.D.
2. Title: Analysis of mono-ADP-ribosylated proteins from pro- and eukaryotic cells.
Tutor: András Penyige M.Sc., Ph.D.
3. Title: Analysis of miRNA profile in tissue and plasma samples of glioblastoma patients.
Tutor: Zsuzsanna Birkó M.Sc., Ph.D.
4. Title: Application of genome editing with the CRISPR-Cas9 system in the treatment of genetic diseases.
Tutor: Krisztina Szirák M.Sc., Ph.D.
5. Title: Overview of the background of an arbitrary genetic disorder.
6. Title: Overview of the genetic background influencing the pharmacokinetics and pharmacodynamics of a drug.
Tutor: Judit Keserű M.Sc., Ph.D.
7. Title: Studying the expression of miR-184, miR-194-5p and miR-203a-3p in Wilms' tumor samples.
Tutor: Gergely Buglyó M.D., Ph.D.
8. Title: Cell-free nucleic acids as liquid biopsy biomarkers for diagnosis and treatment of diseases.
9. Title: Exosomes, as possible biomarkers.

10. Title: Study the role of non-coding RNAs in cancers.

Tutor: Beáta Soltész M.Sc., Ph.D.

11. Title: Study the role of microRNAs in ovarian cancer.

Tutor: Melinda Szilágyi-Bónizs M.Sc., Ph.D.

12. Title: Cytogenetic aberrations in infertility

13. Title: Genetic examinations in t(12;21) positive childhood acute lymphoblastic leukemia

Tutor: Anikó Ujfalusi M.D., Ph.D.

Department of Immunology

1. Title: The role of the HOFI/SH3PXD2B adaptor protein in the regulation of the tumor microenvironment
Tutor: Árpád Lányi M.Sc., Ph.D.
2. Title: The role of innate immune cells in the development of allergic responses
3. Title: The role of innate lymphoid cells (ILC) in human diseases
Tutor: Attila Bácsi M.Sc., Ph.D., D.Sc.
4. Title: Possible use of non-polymorphic MHC-like CD1 molecules in diagnostics.
Tutor: Péter Gogolák M.Sc., Ph.D.
5. Title: Investigation of phytocannabinoid effects on human monocyte-derived dendritic cells
6. Title: Investigation of transient receptor potential channels on human monocyte-derived dendritic cells
Tutor: Attila Szöllősi M.D., Ph.D.
7. Title: Identification of new viral sensors and new regulatory mechanisms in the antiviral responses of human dendritic cells
8. Title: Role of dendritic cells in the development of autoimmune diseases
Tutor: Kitti Pázmándi M.Sc., Ph.D.
9. Title: Study of non-apoptotic cytotoxic processes during immune response, new way of killing apoptosis resistant tumor cells
Tutor: Gábor Koncz M.Sc., Ph.D.

Department of Clinical Oncology

1. Title: Prognostic factors in colorectal cancer
Tutor: Csilla András M.D., Ph.D.
2. Title: Treatment modalities in pancreas cancer
Tutor: Péter Árkosy M.D., Ph.D.
3. Title: Current treatment of metastatic bladder cancer
4. Title: Treatment options of metastatic castration-resistant prostate cancer
Tutor: Balázs Juhász M.D., Ph.D.
5. Title: (P)rehabilitation in oncology
6. Title: Supportive care in oncology
7. Title: Artificial Intelligence (AI) in Oncology
Tutor: Andrea Furka M.D., Ph.D.
8. Title: Palliation in oncology
Tutor: Éva Szekanecz M.D., Ph.D.
9. Title: Epigenetic control of chemopreventive drug action by bromodomain-containing chromatin readers
10. Title: Studies on serotonylated proteins in tumor cells
11. Title: The role of antimicrobial peptides in the interaction of breast cancer cells and macrophages
Tutor: Iván Uray M.D., Ph.D.
12. Title: Prognostic factors in low grade and high grade gliomas
13. Title: Treatment options in advanced and metastatic breast cancer
Tutor: József Virga M.D., Ph.D.

Department of Laboratory Medicine

1. Title: Evaluation of known and novel autoantibodies in the diagnostics of autoimmune and immune-mediated disorders
2. Title: Identification of novel biomarkers for the detection and prediction of cirrhosis associated infections
Tutor: Péter Antal-Szalmás M.D., Ph.D., D.Sc.
3. Title: Vitamin D status in colorectal carcinoma
Tutor: Harjit Pal Bhattoa M.D., Ph.D., D.Sc.

4. Title: Analysis of serum human epididymis protein 4 (HE4) in the follow-up of cystic fibrosis patients
5. Title: Investigation of platelet microRNA expressions in septic conditions
Tutor: Béla Nagy Jr. M.D., Ph.D., D.Sc.

Division of Clinical Laboratory Science

1. Title: Method development for the detection of various antithrombin isoforms
Tutor: Éva Katona M.Sc., Ph.D. habil.
2. Title: Inherited hemostasis disorders; laboratory and molecular genetic aspects
3. Title: Laboratory monitoring of the new generation oral anticoagulants
4. Laboratory investigation of rare thrombophilia
Tutor: Zsuzsanna Bereczky M.D., Ph.D., D.Sc.
5. Title: Characterization of the heparin-antithrombin interaction with surface plasmon resonance
6. Title: New methods for investigating the interactions of blood coagulation proteins
Tutor: Krisztina Péntes-Daku M.Sc., Ph.D.
7. Title: Next-generation sequencing in rare, inherited coagulation diseases
Tutor: Réka Gindele M.Sc., Ph.D.
8. Title: Fibrinolytic marker levels and polymorphisms in inflammatory bowel diseases
9. Title: Investigation of fibrinolytic markers on the outcome of thrombolytic therapy in patients with ischaemic stroke
Tutor: Zsuzsa Bagoly M.D., Ph.D., D.Sc.

Department of Oncoradiology

1. Title: Investigation of lung tumour trajectory based on retrospective 4DCT
Tutor: Mihály Simon
2. Title: Clinical aspects of radiosurgery
Tutor: Árpád Kovács M.D., Ph.D., D.Sc.

3. Title: The role of 4D CT in radiation therapy.

Tutor: Erika Szántó M.D.

4. Title: Comparative analysis of 3D conformal and intensity-modulated locoregional breast irradiation

Tutor: Mária Besenyői M.D.

Department of Dermatology

1. Title: Ablative laser treatment in Hailey-Hailey disease

2. Title: DNA repair mechanisms

3. Title: Indications in ablative Er:YAG laser

4. Title: Methods of sunprotection

Tutor: Éva Remenyik M.D., Ph.D., D.Sc.

5. Title: Dermatofibrosarcoma protuberans - therapeutic possibilities

6. Title: Possibilities of skin grafting in the reconstruction of defects after removal of skin tumors

7. Title: Role of NPWT (Negative Pressure Wound Therapy) in the treatment of burns

8. Title: Imiquimod treatment of superficial basal cell cancer at the Department of Dermatology, University of Debrecen

Tutor: István Juhász M.D., Ph.D., C.Sc.

9. Title: Deformities and discolorations of the nails: relation to other medical conditions.

Overview of the literature and case reports.

Tutor: Éva Szabó M.D., Ph.D.

10. Title: The application of the muscle-sparing latissimus dorsi musculocutaneous flap in breast reconstruction

Tutor: Zoltán Péter M.D.

11. Title: Biological therapy in psoriasis

Tutor: Krisztián Gáspár M.D., Ph.D.

12. Title: Lipid disorder associated dermatological symptoms

13. Title: Pathogenesis and therapy of acne

14. Title: Role of lipid environment in the activation of dermal macrophages

Tutor: Dániel Töröcsik M.D., Ph.D.

15. Title: Application of photodynamic therapy for multiple actinic keratoses

16 Title: Application of photodynamic therapy for non-melanoma skin tumours

17. Title: New treatment protocols for photodynamic therapy

18. Title: Photodynamic therapy for acne and acne scars

Tutor: Emese Gellén M.D., Ph.D.

19. Title: Drug hypersensitivity reactions: types and diagnostic approach

20. Title: Penicillin allergy: diagnostics and management

21. Title: Psoriasis therapy and family planning

22. Title: Psoriasis treatment options in patients with cancer

23. Title: Treatment options of therapy resistant urticaria

Tutor: Irina Sawhney M.D.

24. Title: Merkel cell carcinoma-pathogenesis, diagnosis and treatment options

Tutor: Gabriella Emri M.D., Dr. habil., Ph.D.

25. Title: New therapies in severe psoriasis vulgaris

26. Title: Omalizumab therapy in chronic urticaria

Tutor: Andrea Szegedi M.D., Ph.D., D.Sc.

27. Characteristics of newly diagnosed melanocytic and non-melanocytic skin tumors among patients followed up with FotoFinder examination in our department

Tutor: Zita Szentkereszty-Kovács M.D., Ph.D.

Department of Medical Chemistry

1. Title: Study of metabolic processes with special regard to the involvement of mitochondrial activity.

Tutor: Péter Bay M.Sc., Ph.D., D.Sc.

2. Title: Inhibition of sodium-glucose cotransporter of kidney by glucose-based compounds also interfering with glycogenolysis

Tutor: Tibor Docsa M.Sc., Ph.D.

3. Title: Investigation of Ser/Thr protein phosphatase in pathogenic fungi (literature review)

Tutor: Viktor Dombrádi M.Sc., Ph.D., D.Sc.

4. Title: Interaction of protein phosphatase 1 catalytic subunit with regulatory proteins

Tutor: Ferenc Erdődi M.Sc., D.Sc.

5. Title: High-Throughput Screening

Tutor: Csaba Hegedűs M.D., L.D.S., Ph.D.

6. Title: Regulation of protein phosphatase expression and activity in tumour cells

Tutor: Andrea Kiss M.Sc., Ph.D.

7. Title: Application of High-Content Imaging technology in Life Sciences

Tutor: Endre Kókai M.Sc., Ph.D.

8. Title: Autophagy in physiological and pathological processes

Tutor: Katalin Kovács M.Sc., Ph.D.

9. Title: Overcoming insulin resistance by SMTNL1-mimicking peptide

Tutor: Beáta Lontay M.Sc., Ph.D.

10. Title: Signalling pathways in endometriosis

Tutor: Beáta Lontay M.Sc., Ph.D.

11. Title: Posttranslational modifications of the mitochondrial fission protein Drp1 and their role on mitochondrial morphology.

Tutor: Krisztina Tar M.Sc., Ph.D.

12. Title: The effect proteasomal inhibition in Huntington's disease.

Tutor: Krisztina Tar M.Sc., Ph.D.

13. Title: The effects of bacterial metabolites on intestinal motility.

Tutor: Karen Uray M.Sc., Ph.D.

14. Title: The role of HCN2 inhibition in the development of ileus.

Tutor: Karen Uray M.Sc., Ph.D.

15. Title: The role of mechanotransduction in the upregulation of CXCL1 in the small intestine

Tutor: Karen Uray M.Sc., Ph.D.

16. Title: The role of macrophages in cancer

Tutor: László Virág M.D., Ph.D., D.Sc.

Department of Medical Microbiology

1. Title: Antimicrobial cell-mediated immunity measured by mRNA tests

Tutor: József Kónya M.D., Ph.D., D.Sc.

2. Title: Evaluation of fungicidal effect of antifungal agents using time-kill curves

3. Title: New and older agents in antifungal chemotherapy

Tutor: László Majoros M.D., Ph.D.

4. Title: Prevalance of human polyomaviruses

Tutor: Eszter Csoma M.Sc., Ph.D.

5. Title: Effects of human papillomavirus oncoproteins on cellular signaling pathways in keratinocytes

Tutor: Anita Szalmás M.Sc., Ph.D.

6. Title: Intratype variation of human papillomaviruses

Tutor: György Veress M.Sc., Ph.D.

7. Title: Investigation of antiviral resistance

Tutor: Brigitta László M.Sc., Ph.D.

8. Title: Phylogenetic and functional analysis of sequence variation of high-risk human papillomaviruses

Tutor: Eszter Gyöngyösi M.Sc., Ph.D.

9. Title: The examination of biology of microbial biofilms

Tutor: Renátó Kovács M.Sc., Ph.D.

Department of Internal Medicine

1. Title: Immunotherapy of B cell lymphomas.

2. Title: Safety profile of prolonged rituximab therapy in lymphomas.

3. Title: Targeted therapy in non-Hodgkin's lymphomas

Tutor: Lajos Gergely M.D., D.Sc.

4. Title: Lipid abnormalities in hypothyroidism.

5. Title: The function of LDL in lipid metabolism

Tutor: György Paragh M.D., Ph.D., D.Sc.

6. Title: Diagnostic tests and imaging techniques in endocrinology.

Tutor: Endre Nagy M.D., Ph.D., D.Sc.

7. Title: Lp(a) as a cardiovascular risk factor

8. Title: Therapeutic strategies in hyperlipoproteinemia(a)

Tutor: Mariann Harangi M.D., Ph.D. habil.

9. Title: Differential diagnosis in Graves' orbitopathy

10. Title: New treatment opportunities in Graves' orbitopathy
Tutor: Annamária Erdei M.D., Ph.D.

42. Title: Extraintestinal association in IBD
Tutor: Károly Palatka M.D., Ph.D.
43. Title: Bacterial infection in liver cirrhosis
44. Title: Clinical significance of chronic pancreatitis
45. Title: Current therapeutic options of acute pancreatitis
Tutor: Zsuzsa Vitális M.D., Ph.D.
46. Title: Philadelphia negative chronic myeloproliferative neoplasms - novel genetic and therapeutic improvements
47. Title: Recent advances in the management of chronic ITP
Tutor: Péter Batár M.D., Ph.D.
48. Title: Are the bacterial infections predictable in liver cirrhosis?
49. Title: Role of serological markers in prediction of disease course and response to therapy in inflammatory bowel diseases.
Tutor: Mária Papp M.D., Ph.D., D.Sc.
50. Title: Kidney pathology and outcomes in ANCA-Associated Vasculitis

51. Title: Long-term outcomes in elderly patients with ANCA-associated vasculitis
Tutor: Ibolya File M.D.

52. Title: Gastroesophageal reflux disease
Tutor: László Dávida M.D.

53. Title: Monitoring the efficacy of monoclonal antibody therapies used in SLE through flow of cytometric analysis of molecular immunological markers
Tutor: Ádám Diós M.Sc., Ph.D.

Department of Pathology

1. Title: Functional analysis of malignant lymphomas using image analysis

2. Title: Mitotic failures and cancer progression

3. Title: Molecular diagnostics of solid tumors
Tutor: Gábor Méhes M.D., D.Sc.

4. Title: Head and Neck region squamous cell carcinoma

5. Title: Salivary gland neoplasms
Tutor: Tamás Csonka M.D., Ph.D.

Department of Pharmacodynamics

1. Title: Modern therapeutic opportunities for cancer treatment

2. Title: New therapeutic approaches in gynecological pathology

3. The role of the microbiome in gastrointestinal diseases
Tutor: Sipos Éva D. Pharm., Ph.D.

4. Title: Model systems used in drug metabolism studies

5. Title: Sample preparation techniques used in the analysis of drugs and drug related compounds

6. Title: Application of mass spectrometry in the pharmaceutical and bioanalysis.

7. Title: Free topic from instrumental analytical chemistry.

8. Title: Antioxidants (in general, in diabetes, in diseases, as prooxidants, summarized or selected, etc.).

9. Title: Application of Superoxide dismutase (SOD), Catalase (CAT) and glutathione peroxidase (GPx) mimetics in the therapy

of oxidative stress related disorders.

10. Title: Drugs and drug related substances in the environment.

11. Title: Medical application of small molecular gases (NO, CO, H₂S, CH₄, H₂) in the treatment of different disorders (summary or selected gases)

12. Title: Oxygen: the necessary enemy? (oxidative stress, redox biology)

13. Title: The role of the iron in oxidative stress related diseases

Tutor: Bak István M.Sc., Ph.D.

14. Title: Arrhythmias and antiarrhythmic agents.

15. Title: High blood pressure and the groups of antihypertensive agents.

16. Title: Types of anginas (antiischemic drugs) and their pharmacological treatments.

17. Title: Mechanisms of asthma antiasthmatic drugs.

18. Title: Myocardial infarction and treatments.

19. Title: Diuretics and their therapeutic applications.

20. Title: Drugs (groups) used for tumor therapies.

21. Title: Eye disease and treatments.

22. Title: Major skin diseases and pharmacotherapies.

24. Title: Drug abuses and treatment of addicted patients.

25. Title: Anesthesia, intravenous and inhalational.

26. Title: Sedatohypnotics.

27. Title: Depression, schizophrenia, mania.

28. Title: Epilepsies and pharmacological therapies.

29. Title: Neurodegenerative diseases and their treatments.

30. Title: Local anesthetics and their applications.

31. Title: Hypophysis and its hormones, drug interventions.

32. Title: Major gastrointestinal diseases and

pharmacological interventions.

33. Title: Androgens and estrogens.

34. Title: Diabetes mellitus treatments.

35. Title: Inflammations, nonsteroid and steroid anti-inflammatory agents.

36. Title: Antibacterial and antiviral agents (groups).

Tutor: Tótsaki Árpád D. Pharm., Ph.D., D.Sc.

37. Title: Optimal Dose of Zinc in Different Age Groups

38. Title: Strategies to Fight Against Antimicrobial Resistance in Urinary Tract Infections

39. Title: Pharmacotherapy of Type 2 Diabetes

40. Title: Pharmacology of Depression Impact of Antibiotic Stewardship Program (ASP) on clinical outcomes in patients with empirical antibiotic treatment hospitalized with Community Acquired Pneumonia (CAP)

Tutor: Fésüs Adina D. Pharm., Ph.D.

41. Title: Pharmacology and diet therapy of gastrointestinal diseases.

42. Title: Role of selective autophagy against doxorubicin induced cardiotoxicity.

43. Title: Prevention of isoproterenol induced cardiac hypertrophy.

44. Title: Selected chapters of pharmacology.

Tutor: Gyöngyösi Alexandra D. Pharm., Ph.D.

45. Title: miRNA as therapeutics for cardiac repair in ischemic heart disease (theoretical)

46. Title: Cell death mediated by phytochemicals in different cancer cells

Tutor: Szabó Erzsébet

47. Title: Pharmacological treatment options in the management of obesity.

48. Title: Treatment of dyslipidemia, PCSK-9 inhibitors

48. Title: SGLT-2 inhibitors and heart failure

49. Title: Drugs and pregnancy

50. Title: Drugs and lactation

51. Title: Freely chosen topic in pharmacology

52. Title: The role of H₂S in cardiovascular system.

Tutor: Lekli István D. Pharm., Ph.D.

Department of Pharmacology and Pharmacotherapy

1. Title: Cardiovascular risk factors

2. Title: Metabolic link between obesity and insulin resistance

Tutor: Zoltan Szilvassy M.D., Ph.D., D.Sc.

3. Title: Optional title in pharmacology

4. Title: Pharmacological and clinical significance of adenosine receptor antagonists

5. Title: Pharmacological and nonpharmacological treatment of endothelial dysfunction

6. Title: Pharmacotherapy of trigeminal neuralgia

Tutor: Jozsef Szentmiklosi M.D., Ph.D.

Regulatory Science in the Pharmaceutical Sector

7. Legal and scientific challenges of Conditional Marketing Authorisation (CMA) in the European Union: case studies and directions for future development

8. The role of patient preferences in regulatory decision-making: opportunity or pitfall?

9. Managing uncertainty in the assessment of medicinal products: methodological approaches and regulatory expectations

10. Regulatory use of real-world evidence (RWE) in post-marketing decision-making: current practices and emerging trends

11. Regulatory strategies for the authorisation of orphan medicines: scientific compromises and ethical considerations

12. The regulatory framework of Advanced Therapy Medicinal Products (ATMPs) in the EU: challenges for science and regulatory authorities

13. The role of artificial intelligence in the regulatory assessment of medicinal products: opportunities and regulatory concerns

14. Extrapolation of efficacy in paediatric indications: scientific rationale and regulatory practice

15. The evolution of pharmacovigilance:

redefining the benefit–risk ratio in the era of modern therapies

16. The role of non-clinical data in marketing authorisation procedures: new interpretative trends and the weight of scientific evidence

Biostatistics in Regulatory Procedures

17. Statistical foundations and regulatory acceptance of single-arm clinical trials: methodological challenges in oncology drug evaluation

18. Validation of surrogate endpoints: regulatory perspectives on generalisability and predictive value

19. Biostatistical analysis of real-world evidence (RWE) in regulatory submissions: opportunities, limitations, and methods for bias mitigation

20. The statistical relationship between progression-free survival (PFS) and overall survival (OS) in oncology: endpoint reliability and regulatory interpretation

21. Application of propensity score methods in regulatory evaluations: a statistical approach to real-world comparative effectiveness

22. The role of Bayesian statistical methods in early-access regulatory strategies: benefits and challenges for regulatory authorities

23. Use of external control arms in single-arm trials: statistical reliability of historical comparators in drug assessment

24. Statistical characteristics and regulatory interpretation of endpoints used in oncology trials (ORR, DOR, PFS, OS)

25. Statistical considerations in the assessment of small-population trials: examples from rare diseases and oncology

26. Statistical robustness and clinical relevance: how regulators interpret statistical significance and practical importance of efficacy endpoints

Artificial Intelligence in Drug Evaluation and Development

27. The role of artificial intelligence in the

future of regulatory drug assessment: a means to improve efficiency or a source of uncertainty?

28. Applicability of AI-based predictive models in the evaluation of preclinical and clinical data: issues of regulatory acceptability and validation

29. Natural language processing (NLP) in the analysis of regulatory documentation: acceleration or risk?

30. Supporting indication extensions and targeted therapy development through artificial intelligence: examples and regulatory dilemmas

31. Regulatory algorithms? The role of machine learning in the automation of benefit–risk assessment and its limitations

Advanced Therapy Medicinal Products (ATMPs)

32. Pharmacodynamic characteristics of cell-based therapies: interpreting the mode of action of living medicinal products

33. Gene therapies and the pharmacological regulation of targeted gene expression: novel challenges and opportunities

34. Immunological responses and immunomodulation in gene and cell therapies: pharmacological considerations and therapeutic implications

35. Pharmacokinetics and biodistribution of ATMPs: how can “dose” be defined and measured?

36. The pharmacology of CAR-T cells: cellular dose, duration of effect, and off-target impact

Pharmacology of Bispecific Antibodies

37. Pharmacodynamic properties of bispecific antibodies: the impact of dual targeting on immunomodulation and therapeutic response

38. Pharmacokinetic profiling of bispecific antibodies: elimination, biodistribution, and target-mediated clearance

39. Pharmacological evaluation of checkpoint bispecific antibodies (e.g. PD-1 × LAG-3):

potential for reversing T-cell exhaustion
 40. Pharmacology of T-cell redirecting bispecific antibodies (TCEs): balancing efficacy and cytokine release
 41. Comparative pharmacological analysis of innovative bispecific antibody formats: diabodies, DARTs, and IgG-like structures

Gene Therapy

42. Pharmacodynamic and pharmacokinetic characteristics of modern gene therapies: interpreting dose–response in single-administration treatments
 43. Pharmacological challenges of AAV-based gene therapies: vector type, cell specificity, and immunological interactions
 44. Long-term pharmacological effects of gene therapy products: sustained gene expression and late-onset toxicity
 45. The impact of gene therapy interventions on cellular homeostasis: targeted expression and unintended downstream effects
 46. Pharmacological considerations in CRISPR-based gene editing: target specificity, off-target effects, and dose design

Others

47. Title: Emerging roles of prostaglandin DP1 and DP2 receptors in acute and chronic aspects of allergic diseases
 48. Title: Optional title in pharmacology
 49. Title: Pharmacological treatment of acute decompensated heart failure (ADHF)
 50. Title: Pharmacology of neurogenic inflammation
 51. Title: Pharmacotherapy of Amyotrophic Lateral Sclerosis (ALS)
 52. Title: Pharmacotherapy of Duchenne Muscular Dystrophy (DMD)
 53. Title: Possible pharmacological exploitations of TRPV1 receptors
 54. Title: Use of Histone deacetylase inhibitors (HDI): Novel advances in cancer treatment
 Tutor: Robert Porszasz M.D., Dr. habil., MBA, Ph.D.

55. Title: Recent advances in clinical use of immune checkpoint inhibitors
 56. Title: Optional title on cancer chemotherapy
 Tutor: Attila Megyeri M.D., Ph.D.
 57. Title: Optional title in pharmacology
 Tutor: Bela Juhasz D.Pharm., Dr. habil., Ph.D.
 58. Title: Optional title in pharmacology
 Tutor: Balazs Varga D.Pharm., Ph.D.
 59. Title: Optional title in pharmacology
 Tutor: Mariann Bombicz D.Pharm.
 60. Title: Optional title in pharmacology
 Tutor: Daniel Priksz D.Pharm.

Department of Physiology

1. Title: Alterations of intracellular calcium concentration in pathological conditions
 Tutor: László Csernoch M.Sc., Ph.D., D.Sc.
 2. Title: Regional differences in the electrophysiological properties of cardiomyocytes
 Tutor: Péter Nánási M.D., Ph.D., D.Sc.
 3. Title: Role of afterdepolarization mechanisms in the arrhythmogenesis
 Tutor: Tamás Bányász M.D., Ph.D., D.Sc.
 4. Title: Electrophysiological properties of mammalian cardiac tissues
 Tutor: János Magyar M.D., Ph.D., D.Sc.
 5. Title: Beat-to beat variability of cardiac repolarization
 Tutor: Norbert Szentandrassy M.D., Ph.D.
 6. Title: Role of late sodium current in the arrhythmogenesis
 Tutor: Balázs Horváth M.D., Ph.D.
 7. Title: Role of potassium channels in neuron function
 Tutor: Balázs Pál M.D., Ph.D.
 8. Title: Role of Protein Kinase C isoforms in cell function.
 Tutor: Gabriella Czifra M.Sc., Ph.D.

Department of Emergency Medicine

1. Title: Cardiac rhythm disturbances. Hypertensive emergencies.
 Tutor: Zoltán Szabó M.D., M.Sc., Ph.D., D.Sc.

Division of Endocrinology

1. Title: Diagnostic tests and imaging techniques in endocrinology
Tutor: Endre Nagy M.D., Ph.D., D.Sc.
2. Title: Clinical aspects and management of insulinomas
3. Title: Current treatment of Acromegaly
Tutor: Miklós Bodor M.D., Ph.D.
4. Title: Treatment of Graves' disease
Tutor: Annamária Erdei M.D., Ph.D.

Division of Gastroenterology

Department of Physical Medicine and Rehabilitation

1. Title: Studying the effectiveness of physiotherapy modalities after botulinum toxin treatment for post-stroke and spasticity
2. Title: Testing the effectiveness of the upper-extremity repetitive task practice and forced aerobic training added to ergotherapy to improve upper limb and cognitive functions
3. Title: The efficiency test of the electromyogram-triggered FES treatment in hemiparetic patients and the visual feedback training in the development of upper limb functions
4. Title: The relationship of physiological and functional changes observed in complex rehabilitation programs (obesity and stroke rehabilitation) with adipocytes
Tutor: Zoltán Jenei M.D., Ph.D.
5. The role of exoskeletons in restoring neuromotor trunk control after stroke
Tutor: Zoltán Jenei M.D., Ph.D.

Department of Psychiatry

1. Title: The dietetic and gastrointestinal basis of autism
Tutor: Csaba Móri E. M.D.
2. Title: Cognitive theory and therapy of depression
3. Title: Cognitive theory and therapy of generalized anxiety disorder
4. Title: Effectiveness of Cognitive Behaviour Therapy in OCD

5. Title: Effectiveness of schema therapy in personality disorders
6. Title: Emotion dependent and independent cognitive functions in unipolar depression
7. Title: Significance of dysfunctional attitudes in depression and anxiety disorders
8. Title: Theory of mind and mentalization deficits in patients with personality disorders
Tutor: Anikó Égerházi M.D., Ph.D.
9. Title: Brain imaging in psychiatry.
10. Title: Oxidativ stress and chronic inflammation in psychiatric disorders
11. Title: Post-traumatic stress disorder and post-traumatic growth.
12. Title: The neurobiology of depression.
13. Title: The role of mikrobiota in mental health
14. Title: The therapeutic potentials of psychodelics
Tutor: Ede Frecska M.D., M.A., Ph.D.
15. Title: Role of mentalization in literacy
16. Title: Assessment of literacy in psychiatric disorders and the potential effects of pharmaceutical therapy
Tutor: Judit Zsuga M.D., Ph.D., D.Sc.

Department of Pulmonology

1. Title: New perspectives in the treatment of lung cancer
Tutor: Andrea Fodor M.D.
2. Title: Biologic therapy in severe asthma
Tutor: László Brugós M.D., Ph.D.
3. Title: Relationship between smoking and lung diseases
4. Title: The role of bronchoscopy in the therapy of lung cancer
Tutor: Imre Varga M.D., Ph.D.
5. Title: Modern Therapy of NSCLC
Tutor: Tamás Kardos M.D.
6. Title: Therapic possibilities in lung cancer treatment, side effects
Tutor: Attila Lieber M.D.
7. Title: Biomarkers in pulmonary diseases
8. Title: Eosinophilic pulmonary diseases
9. Title: New treatment options for rare lung diseases

10. Title: The role of the complement factor in respiratory diseases

Tutor: Ildikó Horváth M.D., Ph.D., D.Sc.

Department of Surgery

1. Title: Surgical treatment of Graves disease with ophthalmopathy
Tutor: Ferenc Győry M.D.
2. Title: Surgical treatment of bowel obstruction in colorectal diseases
Tutor: László Damjanovich M.D., Ph.D., D.Sc.
3. Title: Surgical and endovascular interventions in critical limb ischemia
Tutor: Sándor Olvasztó M.D.
4. Title: Histopathologic examination of the carotid plaques regarding their possible prognostic value
Tutor: Krisztina Litauszky M.D.
5. Title: Liver resections for metastases of colorectal cancer
Tutor: János Pószán M.D.
6. Title: Prevention of bronchial stump insufficiency after lung resections
Tutor: István Takács M.D., Ph.D.
7. Title: The surgical treatment of hyperparathyroidism
Tutor: Roland Fedor M.D., Ph.D.
8. Title: Different forms of hereditary colorectal cancer among our patients.
Tutor: Miklós Tanyi M.D., Ph.D.
9. Title: Mesh implantation in the surgical treatment of thoracic defects
Tutor: Attila Enyedi M.D.

Department of Operative Techniques and Surgical Research

1. Title: Anesthesia and analgesia in animal experiments
2. Title: Animal welfare in animal experiments

3. Title: Experimental animal models for metabolic diseases (diabetes, metabolic syndrome, atherosclerosis, kidney tumors) in research

Tutor: Ádám Deák D.V.M., Ph.D.

4. Title: Changes of red blood cells' micro-rheology in surgical pathophysiological processes

5. Title: Microvascular anastomosis techniques

Tutor: Norbert Németh M.D., MBA, Ph.D., D.Sc.

6. Title: Hemostatic agents in surgery

7. Title: Ischemia-reperfusion injury and its prevention with different methods - experimental models

Tutor: Katalin Pető M.D., Ph.D.

8. Title: Analysis for laparoscopic skills assessment

9. Title: Hand hygiene and surgical scrub

Tutor: Erzsébet Ványolos M.Sc., Ph.D.

10. Title: Instruments and devices used in pharmacological care

Tutor: Tamás Lesznyák M.D., D.Pharm.

11. Title: Basic Microsurgical Training course at the Professor István Furka Microsurgical Education and Training Center of the Department of Operative Techniques and Surgical Research

Tutor: Irén Mikó, M.D., Ph.D.

12. Title: Changes in micro-rheological parameters during various surgical and therapeutic interventions

Tutor: Ádám Attila Mátrai M.Sc., PhD.

13. Title: The Past, Present, and Future of Microsurgery

Tutor: Ádám Varga M.Sc., Ph.D.

Department of Urology

1. Title: Role of laparoscopy in urology

Tutor: Tibor Flaskó M.D., Ph.D.

2. Title: Assessment of urinary incontinence

Tutor: László Lőrincz M.D.

3. Title: Different topics regarding prostate and kidney cancer

Tutor: Csaba Berczi M.D., Ph.D.

4. Title: Bladder replacement after radical cystectomy

Tutor: Antal Farkas M.D., Ph.D.

5. Title: Pathology of clear cell renal cancer

Tutor: Alexandra Barkóczi M.D.

6. Title: Treatment of urethral stricture
Reconstructive urological surgeries

Tutor: Mihály Murányi M.D.

7. Title: Assessment of benign prostate hyperplasia

Tutor: József Zoltán Kiss M.D.

8. Title: Effect of orchidopexy on male fertility

Tutor: Tamás Somogyi M.D.

9. Laparoscopic and Robot assisted (DaVinci) partial nephrectomy

Tutor: János Dócs M.D., Ph.D.

10. Microsurgical interventions in andrology

Tutor: Dániel Varga M.D.

Department of Pharmaceutical Technology

1. Title: Biocosmetics.

2. Title: Communication in the pharmacy in the COVID-19 pandemic

3. Title: Consequences of COVID pandemic in the pharmaceutical technology

4. Title: Importance of Patient education in home-countries, what is the role of the pharmacist?

5. Title: Innovation and sustainability in the pharmaceutical technology

6. Title: Modern rectal preparations

7. Title: Pharmaceutical care. Selected chapters from pharmaceutical care, creating and evaluate questionnaires.

8. Title: Pharmaceutical Communication Skills. Description of problems.

9. Title: Pharmaceutical technology. Modified-Release Therapeutic systems.

10. Title: Rectal therapy- future and prospectives

11. Title: Treatment with botulinum, future and prospectives

12. Title: Vaginal therapy

Tutor: Ildikó Bácskay D.Pharm., Ph.D.

13. Title: Examination of the antioxidant

effect of (natural) substrates on HaCaT keratinocyte cell line.

14. Title: Formulation of creams and topical SMEDDS (self-microemulsifying drug delivery systems).

Tutor: Pálma Fehér D.Pharm., Ph.D.

15. Title: Lipid-based drug delivery systems: liposomes, LNP, SLNP, etc.

16. Title: Therapeutic applications of lipid-based nanoparticles.

17. Title: Targeting options with lipid-based nanoparticles.

18. Title: Application of microfluid technology.

Tutor: Judit Váradi D.Pharm., Ph.D.

19. Title: Application of the G. mellonella model system for testing drug formulations.

20. Title: Cytotoxicity testing of drug formulations

Tutor: Dániel Nemes D.Pharm, Ph.D.

21. Title: Investigation of the Role of Microbiome-Derived Short-Chain Fatty Acids in the Regulation of Intestinal Barrier Function. Tutor: Ágnes Tóth-Klusóczki, M.Sc., Ph.D.

Department of Pharmaceutical Chemistry

1. Title: Synthesis of new hydrogen sulfide donor drug candidates

Tutor: Pál Herczegh Ph.D., D.Sc.

2. Title: Newly accepted antiviral and antibacterial drugs (literature compilation)

3. Title: Newly approved antibiotics (literature compilation)

4. Title: Synthesis of antiviral molecules

5. Title: Synthesis of cannabidiol (CBD) and cannabigerol (CBG) derivatives

Tutor: Ilona Bakai-Bereczki Ph.D.

6. Title: Synthesis of anti-bacterial and anti-tumor glycomimetics

7. Title: Synthesis of glycosidase and glycosyltransferase inhibitors

8. Title: Preparation of antiviral, anti-tumor and anti-malarial nucleoside analogues by aminocyclization or photoinitiated thioladdition reactions

9. Title: Development of pathoblocker glycomimetics for the treatment of fungal and bacterial infections

10. Title: Design and synthesis of antiviral agents acting through targeted protein degradation

Tutor: Anikó Borbás Ph.D., D.Sc.

11. Title: Preparation of Potential Alpha-Glycosidase Inhibitors for Antibacterial, Antiviral, Antimalarial and Antitumor Investigations (experimental thesis work topic)

12. Title: Synthesis of Mono- and Oligosaccharides for the Investigation of Lectin-Carbohydrate Interactions (experimental thesis work topic)

13. Title: Potential Use of Iminosugars for Therapeutic Purposes (literary thesis work topic)

14. Title: Use of Reductive Amination Reactions in Syntheses of Biologically Active Compounds (literary thesis work topic)

Tutor: Erika Hevesi-Mező Ph.D.

15. Title: Synthesis of drug candidates with potential antibacterial and antitumor activities via photocatalyzed thiol addition reactions

Tutor: Fruzsina Józsefné Demeter Ph.D.

16. Title: Synthesis of carbohydrates derivatives as potential lectin inhibitors

17. Title: Carbohydrate based drugs (literature compilation)

Tutor: Ágnes Homolya Ph.D.

18. Title: Modification of nucleosides by thiol addition

Tutor: Miklós Bege PhD

Department of Pharmaceutical Surveillance and Economics

1. Title: Clinical pharmacy

2. Title: Drug utilization research

3. Title: Pharmacoepidemiology

4. Title: Practice of pharmacovigilance

Tutor: László Horváth D.Pharm., Ph.D.

5. Title: Aspects of Pharmacoeconomy in Therapy management

6. Title: Interactions in the practice of Pharmacovigilance by the aspects of a patient

7. Title: Management of compliance by patient profile and risk evaluation

8. Title: Pharmacovigilance in practice by the aspects of pharmacists and the patients

9. Title: The role of food supplements and vitamins in „Longevity” programs

Tutor: Béla Tóth E. M.D., MBA, Ph.D.

10. Title: Nanoparticles and their potential for application in bone.

11. Title: The connection between the regulation of the endocrine and the immune system

12. Title: Pharmacovigilance aspects of a selected drug

Tutor: Miklós Vecsernyés D.Pharm., Ph.D.

Department of Biopharmacy

1. Title: Any subject from the field of biopharmacy

Tutor: Gábor Halmos D.Pharm., Ph.D.

Department of Industrial Pharmaceutical Technology

1. Title: Formulation Challenges of Probiotics and Postbiotics: Stability and Delivery

2. Title: Considerations in Supplements and Skincare Products

3. Title: Natural Excipients in Modern Formulations: Balancing Consumer Demand and Technological Performance

4. Title: Amorphous Solid Dispersions as a Strategy to Enhance the Bioavailability of Poorly Water-Soluble Drugs

5. Title: Smart Drug Delivery Systems: Integration of Digital Technologies and Sensors in Modern Dosage Forms

6. Title: Green Pharmaceutical Manufacturing: Strategies for Reducing Solvent Use in Solid Dosage Form Production

7. Title: Contamination Control in Cleanroom Environments: Monitoring and Management of Viable and Non-viable Particles

Tutor: Zoltán Ujhelyi D.Pharm., Ph.D.

CHAPTER 23

WRITING AND DEFENDING A THESIS

- (1) The thesis topics, and names of the supervising teachers are available in the faculty bulletin, in the program description and on the website of the faculty.
- (2) The Educational Units [departments] put together the list of theses to be announced (with the names of the consultants), which is included in the program description. The student is to choose from this list, and any deviation from it, has to be approved by the heads of the aforementioned Educational Units. The student is required to choose the topic of his/ her thesis before the last week of the second semester in the fourth academic year. In case the student intends to choose an experimental topic, he/she is expected to declare it before the last week of the first semester of the fourth academic year. The titles of the thesis must be submitted to the Dean's Office in the last week of the first or second semester of the fourth academic year.
- (3) The thesis can be done as part of research under the auspices of the Students' Scientific Association (SSA). An essay can be accepted as a thesis, on condition it has been acknowledged by the panel of judges of the local SSA conference as a thesis and thereby the specific essay was graded 'excellent'; in case of an essay with multiple authors it can be accepted as a thesis in its original form if the declaration of waiver by the other authors is attached. The documents regarding the acceptance of the thesis (evaluations, answers) must be submitted in an attachment. It is also necessary to fill in and submit a questionnaire containing details (title, authors, departments, supervisors) of the essay and SSA presentation.
- (4) The deadline to submit the thesis at the Faculty of Pharmacy is three months before the written final exam. In case the student fails to do this by the deadline, he/she can take his/her comprehensive exams, but cannot take the state exam. The deadline to submit the thesis can be postponed up to two weeks in specific cases, with the supervisor's suggestion and with the permission from the head of the Education Committee.
- (5) The thesis must be submitted in two copies at the Education Office and electronically uploaded to the electronic archive of the University and National Library of the University of Debrecen before the beginning of the written final exam. It should not exceed 40 typed pages in length. The typed or word processed and printed thesis must be submitted bound and in an aesthetic design. Margins must be 2.5 cm at the top and bottom, and 3 cm on the left and right. Its structure and the process of evaluation must meet requirements as follows:

a) The thesis can outline the author's own experimental activities; it can be a case study, a clinicopathological or statistical analysis or even a summary of scientific literature. It should not necessarily contain new scientific results but it should definitely sum up the author's individual work in a specific field. Results other than the author's own should be specified exactly. The front page should contain information as follows: the title of the thesis, author's name, supervisor's name, name of the educational unit in which the thesis was written, name of the head of department and date of accomplishment. The thesis can be submitted in the possession of signatures from the supervisor and head of department. (Specimen documents/forms can be downloaded from the

homepage of the Faculty). Introduction, aims, results and discussion should be arranged in separate chapters. Furthermore, the thesis should also contain a summary (of maximum two printed pages). Bibliographic information should be organized as follows: authors' names (first names by initials), full title of publication, name of journal where it appeared, number of volume, page(s) and year of publication. In case a book is referred to, the name(s) of the book's author(s) and of the publisher should both be provided. The number of references should fall in the range of 20-50 publications.

b) On evaluating a thesis, referees will consider its logical organization and professional relevance, the methods applied and the accuracy through which results have been presented.

c) The supervisor of the thesis will evaluate the author's professional activities and, together with the thesis, submit the written evaluation in two copies to the Education Office and the person(s) in charge at the specific department. (Specimen documents/forms can be downloaded from the homepage of the Faculty).

d) The submitted thesis will be allocated to two referees at the official request of a professional board appointed by the Educational Committee of the Faculty. In case a referee fails to fulfil his commitment, he should return the thesis to the Education Office without delay. Referees should prepare and send two printed copies of their written evaluation to the Education Office, while the electronic version should be sent to both the Education Office and student (author) within two weeks of submission. If neither referee accepts the thesis, the student has to re-write it with due consideration of the critical remarks made by the referees. If only one of the two referees accepts the thesis, it should be allocated to a third judge whose opinion will be exclusively considered in the future. A candidate can orally defend his/her thesis if both referees have accepted it.

Students will get a written evaluation from the referees and they must respond – even if they agree with the remarks – in both written and electronic form within one week of receipt and send their (written) response to both the Education Office and referees. Referees should electronically declare their acceptance of the student's response within five days.

The thesis must be defended in the educational unit in which the topic was announced, in front of thesis defense committees appointed by the Dean's Office. The defense itself will take place in front of a committee including three members. The chairperson of the defense committee should be a head tutor of the faculty, while the members are selected as follows: one of the certified tutors of the faculty and a person keeping the minutes, the head of the education unit or a head tutor

(chairperson) appointed by him/her, and the referees. The supervisor and the referees must be invited to participate at the event of defense. The committee evaluates the thesis in a closed session.

A thesis defense report is made in three copies containing the student's name, the title of the thesis, date and place of defense and the mark/grade approved by the committee. One of the copies belongs to the educational unit of the faculty, the other two are sent to the Education Office by the institute.

One copy of the thesis shall be kept in the educational unit of the faculty for five years, one copy is returned to the student and one copy is also available through the University of Debrecen Archive (DEA) and can be accessed from the University's IP range <https://hdl.handle.net/2437/381896>

The following should be attached to the thesis:

the supervisor's report which is the written evaluation of the candidate

a summary of the thesis with name and title

plagiarism declaration form in which the student declares that the thesis is his/her own work

a request for limited access to thesis form - if needed

The final exam (test) consists of a practical and oral part.

The chair and the members of the committee are appointed by the Dean or the Vice Dean.

The date of the written state exam is appointed by the Ministry of Education.

The dates of the practical and oral state exams are assigned by the Dean's Office. The exam is conducted in front of a state examining committee of three to five people. The examination committee at the practical final exam at the Faculty of Pharmacy consists of two tutors of the university appointed by the Dean's Office. The theoretical examination committee is chaired by a senior lecturer of the Faculty and consists of at least 1 senior lecturer and 1 secretary, and may also include a recognised specialist in the field. The Dean's Office can appoint more than one examination board to conduct simultaneous theoretical exams.
